## ABSTRACT

In the Phase IV portion of the Study of the Need for Educational Manpower for Handicapped Children and Youth, motivational factors affecting special education manpower supply and the impact of PL 85-926 on the supply were evaluated in two studies to which separate questionnaires were developed: the Personnel Motivation Study and the University Impact Study. The questionnaire concerning motivation factors causing people to enter, remain in, and leave special education was sent to personnel in the field, while the questionnaire concerning the effect of PL 85-926 funding on university special education programs was sent to universities offering programs for training personnel in the education of the handicapped. Results of the surveys demonstrated positive effects of PL 85-926 in all respects. It increased the capacity of universities receiving funds to supply manpower, and improved the quality as well as the quantity of graduating students. Attrition from the field was less among students receiving grants than among others. The relevancy of working with handicapped children, to personal and social values, attracted many students, but many had unrealistic images of time and energy commitment required or objected to training requirements for certification, pay, and working conditions. (EC 032 848-EC 032 852 contain related information.) (KW)

Education, and Welfare

## PREFACE

The Study of the Need for Educational Manpower for Handicapped Children and Youth - Phase IV Report has been organized into two separate study reports. Both reports are bound within this single volume, followed by a common appendix section. The first part or University Impact Study deals with institutions training manpower and special education, while the second part or Personnel Motivation Study deals with people in the field of education.

## ACKNOWLEDGMENT

The project team wishes to express its appreciation to Dr. James J. Gallagher, Dr. Michael Marge, and Dr. Edwin W. Martin for their valuable guidance in the preparation of this study. Special thanks are offered to Dr. Leonard J. Lucito, who served as project officer.

Additional appreciation is extended to Dr. Charles Horn and Dr. Herman Seattler, and Mrs. Ann Collins, whose research has assisted us in preparing our sample frames.

The following personnel of the Bureau of Education for the Handicapped also contributed to the development of information requirements for this study:

Dr. Paul Ackerman	Dr. Robert Mulder
Mr. Gerald Elbers	Dr. Max Mueller
Dr. Charles Forgone	Mr. Bobby Polk
Dr. Harold W. Heller	Dr. Phillip J. Schmitt
Mr. William A. Hillman	Miss Josephine L. Taylor
Dr. J. Gerald Minskoff	Mr. James T. Tompkins
Dr. James Moss	Dr. Kenneth E. Wyatt.

Grateful acknowledgment also is given to all of the University Department Chairmen, Program Area Directors, and Education Personnel who gave of their valuable time to complete the survey forms.

The project team for Operations Research, Inc., (ORI) included:

Raymond D. Mintz, Program Director, who was responsible for the overall management of the project.

Peter M. Plantec, Principal Investigator, who was responsible for overall technical direction and day-to-day management of the project team in the final stages of study, and authored the Phase IV Report.

Dr. Monroe B. Snyder, who was responsible for management of the project team during developmental stages.

Harold Nisselson, who developed the special sampling techniques used in this study.

The analysis and edit programs were prepared by Miss Beverly Johns. The background research, survey administration, sample selection, and coding formats were the responsibility of Michael W. Brown, William D. Liggett, and Miss Linda Griffith.

The project team expresses its appreciation also to the following consultants for their valuable technical and professional services:

Dr. Samuel Ashcroft

Dr. Harold Goldstein

Dr. Robert Henderson.

## SUMMARY

1. Under the auspices of the U.S. Department of Health, Education and Welfare, Office of Education, Bureau of Education for the Handicapped (BEH), a study entitled "Study of the Need for Educational Manpower for Handicapped Children and Youth" was initiated by Operations Research, Inc., (ORI). The information gained from the study is to be used as a basis for establishing programs to relieve the special education manpower shortage. The first of the two major objectives of the study was concerned with the development of an operational model that would permit the organized consideration of the factors affecting the requirements for special education in manpower.

2. The second objective, and the one that is the topic of this Phase IV Report, concerns the determination and evaluation of those motivational factors which affect special education manpower supply, and the evaluation of the impact of PL 85-926 on the supply.

3. The tasks prescribed for this Phase IV study have been applied toward the accomplishment of objectives based on each of these two concerns.

These two main objectives were approached individually as a University Impact Study and a Personnel Motivation Study.

## STUDY APPROACHES

### Use of BEH Records

4. A thorough analysis of the information content and retrievability of the HEW files concerning the administration of PL 85-926 was accomplished.

5. It was concluded that, except for necessary data otherwise unavailable, the extraction of data elements from these files would be too costly in terms of time and uneconomical use of manpower. The information would not be complete and a supplementary survey would still be necessary to perform the study. For these reasons, the files were not used as a source of data for the University Impact Study. An attempt was made to use the files to identify fund recipients among students and practitioners, but the files were not up to date and this attempt was aborted. As a result, the initial concept was modified and a plan was evolved which would utilize universities and individuals as the sources of data.

#### Information Requirements

6. A panel consisting of special education manpower training experts and the ORI staff was convened to discuss, investigate, and isolate characteristics which could be used to measure: (a) the effect of PL 85-926 funding on university special education programs, and (b) motivation factors causing people to enter, remain in, and leave education for the handicapped. The information outline thus arrived at was then discussed with the BEH.

7. The inclusion of both university representation and the participation of BEH in the investigation, analysis, and review process resulted in the finalization of information requirements that would be both useful to BEH and collectable from the universities. It provided a sound foundation upon which to base the development and selection of study approaches.

#### Development of Questionnaire

8. A series of questions were prepared that requested a range of information about the university programs and personnel motivation patterns emphasizing the impact of PL 85-926 on them. Because it is not always possible to quantify some of the information requested, many of the questions asked for opinion-type answers. The responses to this type of question can be classified in response categories, coded, and tabulated for final analysis. The phrasing and intent of these questions were thoroughly reviewed by the aforementioned panel of consultants and BEH personnel.

9. Use of Special Questionnaire Techniques. Several motivation-measuring techniques were evaluated and a psychological scaling technique was elected for use in the questionnaire. The approach was to identify the basis for career choices made at the various decision points. This was done by determining the motivation expected to influence choice behavior in specific areas and by providing a scale type question for each area.

10. The scales used in this survey were especially designed to construct a motivation profile for the decisions to enter, remain in, and leave special education. The profile consists of a number of factors which are rated on two scales, one for Degree of Attraction and the other for Degree of Importance.

The attraction scale quantifies the perceived amount of satisfaction (on a specific variable) available in special education relative to all alternatives. The score on this scale not only gives magnitude but direction to a person's probable movement, if this were the only variable to be considered. However, the individual considers many other variables (aspects) by degree of importance. This is the reason for the second scale which rates each area with its relative importance compared with all other areas.

11. A Career Tracer Method. Members of the BEH expressed a desire for information concerning career choices over the entire career of each individual. Although beyond the scope of this study, a career sequence tracer chart was designed so as to provide a data base for future BEH analysis. This chart is filled out by each respondent according to past decisions.

12. Several types of charts were tested and most proved difficult to complete, or contained too little information. The final chart was successfully pretested and used in the survey. It can provide data for many kinds of analysis. The following are a few examples:

- a. Time taken to obtain degree
- b. Time spent in part /full time study
- c. Reasons for different training sequence
- d. Type of employment experience
- e. Changes in type of training.

13. Therefore, career sequence data were coded and put into machine-readable form for future analysis. Detailed analysis of this chart is not presented in this report as it is beyond the scope of the present study.

14. The results of using this scaling technique are a series of motivation profiles of respondents for each career decision of interest to this study. To assure a useful product, all questionnaires were pretested on appropriate samples. The comments and item responses were analyzed. Items which were poorly worded or constructed were modified, and general format and print quality were improved before final mailing. Pretesting resulted in the improved format needed for effective data collecting.

### Sample Selection

15. The sample designs for the impact and motivation studies were undertaken as separate efforts. The review of information requirements resulted in the selection of methods for obtaining necessary information and in identifying the study target samples.

16. A literature search was undertaken to identify all universities in the United States which offer programs for training personnel in the education of the handicapped. Many universities offer such programs within their Department of Special Education, but some universities offer speech and hearing

programs as a major, independent of a Special Education Department. The identification process, therefore, had to include this possibility. As a result of the effort in this task, the sample population was identified and refined, and a mailing list of 508 potential survey respondents (departments) was prepared.

### The Motivation Sample

17. Initially, it was assumed that the sample groups could be identified through mailing lists of professional organizations. However, because these organizations were unable to allow use of their mailing lists of professional and student members, alternate procedures had to be developed.

The two major steps in the sampling procedure adopted were:

- a. Assembly of the personnel mailing lists from various sources
- b. Taking of random samples from these lists.

18. The compilation of all the sampling lists was accomplished by three separate methods. These methods are described for each sampling procedure in the text.

### Conducting the Survey

19. Mail Distribution. To avoid confusion and assure that each questionnaire form was sent to right target groups quickly, special procedures were used:

- a. Questionnaire forms were mailed processed sequentially, i.e., one form-type was mailed completely before another was started, etc.
- b. Assembly line stuffing and checking procedures were set up using time/motion analysis for efficiency.
- c. All questionnaires were batch mailed by state to speed delivery.
- d. Preprinted return mail envelopes were included in each package.
- e. Each questionnaire was stamped with its unique ID code number and logged out by number in a master logging control file.

20. Follow-up Procedures. Follow-up was carried on in accordance with procedures described in the text. A sequence of follow-up letters and telegrams was sent to a sample of motivation nonrespondents and to all impact nonrespondents.

## FURTHER FEDERAL EFFORTS

21. The results of the survey suggest further work necessary to understand and control the manpower supply.
22. These efforts range from further use of the motivation scaling technique in estimating probable manpower losses, to a teacher migration study to estimate geographic manpower shortages and surpluses.
23. The experience gained during the study also suggests that Federal guidelines be established for developing local university information systems.

## CONCLUSIONS

24. The results of the two surveys were positive in all respects. The impact of PL 85-926 cannot be denied. It increases the capacity of those universities receiving funds to supply manpower to the national pool. It improves not only the quantity but also the quality of graduating students. In addition, students receiving grants tend to attrite from the field far less than others.
25. The motivation study brought out the factors most important in attracting people to the field as well as the causes for attrition. It seems the relevancy of working with handicapped children, to ones personal values and to social values is a powerful magnet drawing in students. However, many students do not have a realistic image of the commitment in time and energy needed to be successful in education for the handicapped. Many balk at the training requirement for professional certification while others are overly concerned about pay and working conditions.
26. On the bright side, many students and practitioners realize the commitment needed and are willing to put forth the effort necessary to achieve success in the field. Suggestions are given in the text as to what must be done to create a more realistic public image of the Special Educator.

## I. INTRODUCTION

### BACKGROUND

1.1 Under the auspices of the U. S. Department of Health, Education and Welfare, Office of Education, Bureau of Education for the Handicapped (BEH), a study entitled "Study of the Need for Educational Manpower for Handicapped Children and Youth" was initiated by Operations Research, Inc., (ORI). The information gained from the study is to be used as a basis for establishing programs to relieve the special education manpower shortage. The first of the two major objectives of the study was concerned with the development of an operational model that would permit the organized consideration of the factors affecting the requirements for special education in manpower.<sup>1/</sup>

1.2 The second objective, and the one that is the topic of this Phase IV Report, concerns the determination and evaluation of those motivational factors which affect special education manpower supply, and the evaluation of the impact of public law (PL) 85-926 on the supply.

1.3 The Division of Training Programs, Bureau of Education for the Handicapped, U. S. Office of Education, administers the Grant Awards Program under this public law. Eligible participants are institutions of higher learning and state education agencies in all states and including Guam, Virgin Islands, American Samoa, and Puerto Rico.

1.4 The following basic types of grants are awarded to teachers, supervisors, researchers, and specialized personnel working with the handicapped:

---

<sup>1/</sup> Detailed descriptions of the work concluded in conjunction with the first objective are contained in ORI Technical Report 602, Study of the Need for Educational Manpower for Handicapped Children and Youth—Phase III Report, 1 May 1970.

- a. Undergraduate Traineeships - provides traineeships for full-time study at junior or senior level.
- b. Graduate Fellowships - assists colleges and universities in the preparation of professional personnel at the masters and post-masters levels.
- c. Summer Session Traineeships - training program for full-time summer study not to include pre-, post-, and intersessions. Generally, summer session traineeships are for purposes of in-service education.
- d. Special Study Institutes - multipurpose training vehicle that can be held for various types of personnel at various levels for various periods of time.
- e. Program Development Grants:
  - 1. Regular: grants for increasing the number of and expanding existing quality programs to different levels of training.
  - 2. Special Projects: grants for planning, trying new models of training, and evaluating their effectiveness and efficiency.

1.5 Presently, there are more than 700 programs in approximately 250 colleges and universities receiving support under this program. In FY 1968, more than 13,000 persons received part-time training under this program. During the decade since the passage of PL 85-926, over 325 program development grants have been awarded to institutions of higher learning, 18,000 undergraduate and graduate students in special education have received assistance, 8,000 special educators have participated in summer institutes to improve their skills, and close to 18,000 persons have participated in special study institutes conducted by individual state departments of education.

1.6 The only quantitative data available at this time regarding results of the Federal grants come from a sample survey conducted by the Division of Training Programs covering award recipients studying during academic year 1965-66 which showed that in 1967 approximately 93 percent of the recipients were engaged in activities for the handicapped.

1.7 This summary has dealt with PL 85-926, as amended, from its passage through FY 1968. The public law has now been amended to include training of subprofessional personnel and others who do not require professional or advanced training.

#### PURPOSE OF THE REPORT

1.8 The purpose of this report is to present the findings, conclusions, procedures, and data which were developed during the conduct of the Phase IV

portion of the Study of the Need for Educational Manpower for Handicapped Children and Youth. It includes:

- a. A description of the procedures and techniques used to develop the information parameters necessary to the evaluation of the impact of PL 85-926 on the supply of special education manpower
- b. A discussion on the determination of the motivation factors which affect the entrance into, retention in, and separation from the field of special education
- c. A description of the data-gathering techniques as they apply to the questionnaire content and organization
- d. An explanation of the sampling techniques which were developed and applied for both university response (impact of PL 85-926 on university training of special educators) and individual response (participant motivation)
- e. A description of the questionnaire survey administrative procedures involving mailing, follow-up, coding, and preparation for input to the computer
- f. A discussion of the survey findings and the resultant general conclusions as they pertain to both PL 85-926 impact and motivational factors
- g. A tabular summarization of the data collected in the survey and an explanation of the data combinations which were evolved to aid in data analysis.

## ORGANIZATION OF THE REPORT

1.9 This report is organized so that the reader need only read to the extent of detail necessary to satisfy his specific requirements. Section II reviews the Phase IV study objectives and describes the general findings and conclusions derived as a result of the work performed. In Section III, the procedures, techniques, and results associated with the tasks necessary to determine the impact of PL 85-926 on the supply of special education manpower are described. Because of the predominant role played by universities in the preparation of manpower for the special education field, this facet of the study has been designated as the University Impact Study. The constraints which established the level of the study, the analytical detail, and the quality and quantity of the data collected are discussed. This section similarly discusses the tasks associated with the determination of special education personnel motivations.

1.10 There are five appendices to this report. Appendix A contains a series of tables which make a respondent/nonrespondent comparison based upon five selected variables. Appendix B contains copies of the survey materials (cover letters, questionnaires, and follow-up letters and telegrams) that were used

to obtain the survey data for both the University Impact Study and the Personnel Motivation Study. Appendix C consists of a detailed technical discussion on some statistical questions considered in the design of a plan to control avoidable nonresponse in the Personnel Motivation Study. Appendix D contains coded and tabulated data summaries for both the University Impact Study and the Personnel Motivation Study. Appendix E lists all the universities to which University Impact Study questionnaires were sent.

## II. PHASE IV STUDY OBJECTIVES

### SPECIFIED OBJECTIVES

2.1 The objectives of the Phase IV Study are to identify and evaluate motivational factors affecting the supply of manpower in the field of special education and to assess the role of PL 85-926 on the manpower supply. In accordance with these objectives, the focus of Phase IV is twofold:

- a. Assessment of the impact of PL 85-925 on special education manpower supply
- b. Determination of what motivates people to enter, remain in, and leave the field.

### ACCOMPLISHMENT OF OBJECTIVES

2.2 Each objective is further defined into subobjectives to facilitate the more detailed identification of the specific end products necessary to the total accomplishment of the Phase IV effort. These subobjectives and a brief statement of their accomplishment procedures are contained in the following paragraphs.

#### Assessment of the Impact of PL 85-926

2.3 Since the major impact of PL 85-926 is on university programs, this part of the study is identified as the University Impact of PL 85-926. The four subobjectives of this study are to:

- a. Design and implement a survey technique capable of collecting qualitative data on university programs directed toward training personnel in the field of education for the handicapped (EH). In response to this requirement, survey questions of two types were asked:

1. Objective quantitative questions on program parameters such as the number of graduates, and classroom space
  2. Subjective qualitative questions that would interpret and verify the objective data, such as "Has PL 85-926 stimulated the university to supply additional funds to your program?"
- b. Evaluate changes in on-going program quality which are directly attributable to PL 85-926 grant funds. These changes were evaluated by obtaining objective data for time periods before and after the funding was made available.
  - c. Identify alternate applications for funds that could increase the quality of fund results. Alternate areas for funding impact were obtained through opinion type questions asked of department chairmen, such as "Could you use graduate fellowship funds more effectively in some other way?"
  - d. Compare the overall nature of special education programs at funded universities with those at nonfunded universities to determine if there are any significant differences because of PL 85-926 funding. Special questionnaires were sent to nonfunded as well as funded universities to collect data for use in comparing their special education program characteristics.

#### Personnel Motivation Study

2.4 As with the other major objective, this objective has also been reduced to more detailed subobjectives to:

- a. Conceptually define motivation with an accepted theoretical framework. A modified version of Lewins Field Theory was used to define the motivation concept.
- b. Design a system by which motivation could be measured. A special psychological scaling technique was designed to operationally define the parameters of motivation.
- c. Identify a sample in which to measure motivation characteristics in terms of this study. Eleven sample subgroups were generated which govern all phases of education and all career decisions considered in this study.

- d. Integrate the study findings into a motivation profile analysis useful to BEH in controlling the special education manpower supply. The motivation potential of several motivating factors such as pay, prestige, and social relevancy are presented in terms of motivation profiles for relevant combinations of the 11 sample subgroups.

### III. FINDINGS AND CONCLUSIONS

3.1 This section presents some of the study's findings and conclusions. Nevertheless, it is expected that additional findings of significance will be brought to light by the BEH research staff. For convenience in discussing the field of education for the handicapped, it will be abbreviated as EH in the following discussions.

3.2 This section is organized so as to present the findings and conclusions of the University Impact Study and the Personnel Motivation Study separately. For each question, the tabulation reference is cited, the question is restated, selected findings are presented and conclusions are discussed. Not all questionnaire items are included in the discussions as the findings on some items were inconclusive.

#### UNIVERSITY IMPACT STUDY

3.3 This discussion of findings concerning the impact of PL 85-926 on universities is presented in two parts. The first compares chairmen at funded (CF) and nonfunded (CNF) universities while the second similarly compares program area directors (PADs).

#### Chairmen Comparisons

3.4 Tab Reference. CNF Simple Tabs Nos. 2 and 3.

Question. Has PL 85-926 amended had any impact on your programs?

Findings.

	<u>CNF (%)</u>
Yes	31.74
No	61.91
No response	6.35

Of those CNF who felt the impact of PL 85-926 on their programs, about one third said they received PL 85-926 funds through their state Department of Education.

Conclusion. The impact of PL 85-926 has spilled over into many nonfunded programs. This is because of the money distributed through states, as well as generally improved standards in the field directly or indirectly attributable to the law.

3.5 Tab Reference. CNF Simple Tab Nos. 4 and 5.

Question. Does your department receive any Federal funding (CNF only)?

Findings.

	<u>CNF (%)</u>
Yes	31.75
No	61.90
No response	6.35

Conclusion. These percentages are identical to those on the question asking about the impact of PL 85-926 funds. This would indicate that all schools who receive other Federal funds also receive PL 85-926 funds through their states. This, however, is not the case; a review of specific responses indicates that a number of nonfunded chairmen of nonfunded programs are confused about what PL 85-926 funds really are. Some apparently have attributed the impact of other types of Federal funds to PL 85-926.

3.6 Tab Reference. CNF Simple Tab Nos. 6, 7, 8, and 9; CF Simple Tab Nos. 2, 3, 4, and 5.

Questions. Are traineeships effective in producing high quality students? Are fellowships effective in producing high quality students?

Findings.

<u>Traineeship</u>	<u>CNF (%)</u>	<u>CF (%)</u>
Yes	60.30	38.17
No	15.87	46.38
No response	23.81	15.46
<u>Fellowship</u>	<u>CNF (%)</u>	<u>CF (%)</u>
Yes	69.83	79.70
No	17.46	10.63
No response	12.70	9.66

Of the CNF universities, 60 percent felt that undergraduate traineeships were effective, while only 38 percent of the CF universities felt this way. A large number of both CNF and CF mentioned that traineeships help recruit better students to the program. In addition, the nonfunded chairmen indicated that traineeships were effective because they allowed high quality students to finish without interruption, while few funded chairmen mentioned this.

Of the CNF universities, almost 70 percent felt that graduate fellowships were effective, while approximately 80 percent of the CF universities felt this way. A large number of both CNF and CF mentioned that fellowships attract better students to the program and that funding aided qualified students to continue their education. In addition, a number of CF also cite that striving for academic aid results in excellent grade averages, and sets high standards for graduate work.

Conclusions. It can generally be concluded that funded universities would prefer to invest funds in training of graduate students rather than undergraduate students. On the other hand, CNF universities tend to be less discriminating in the use of funds. They seem to feel that funds can be used with about equal effectiveness for both graduates and undergraduates although slightly greater emphasis is placed on the use of fellowships for graduate students.

3.7 Tab Reference. CNF Simple Tab Nos. 10, 11, 12 and 13.

Questions. Do you feel that PL 85-926 funds would be of benefit to your program? Has your university ever applied to BEH for direct funding under PL 85-926?

Findings.

<u>Benefit?</u>	<u>CNF (%)</u>
Yes	84.12
No	1.59
No response	14.29
<u>Ever Applied?</u>	<u>CNF (%)</u>
Yes	55.55
No	20.64
Don't know	1.59
No response	9.52
Other	12.70

Of the CNF universities, 84 percent said that PL 85-926 funds would be of benefit to their programs. The most frequent reasons mentioned were to "Provide funding for staff increase, lecturers, consultants, support staff, etc.," and to "provide funding for program area additions or developments."

Over one-half of the chairmen report that they have applied for PL 85-926 funds. It is interesting to note that 6.35 percent of the chairmen said that they had not applied for funding since they were not familiar with PL 85-926.

Conclusion. The overwhelming majority of nonfunded institutions feel that PL 85-926 funds would be of benefit to them. However, only a little more than one-half have ever applied for this funding.

3.8 Tab Reference. CF Simple Tab Nos. 6, 7, 8, and 9.

Question. What was the impact of PL 85-926 funds on training programs and types of growth stimulated by funds (chairman funded)?

Findings. Funded chairmen most frequently reported two impacts of PL 85-926.

- a. An increase in number and quality of faculty, support staff, consultants, lecturers, etc.
- b. An overall increase in student enrollments.

Conclusion. The general impact of the law in the eyes of funded chairman, has been to increase the quality and size of the potential manpower supply. This is by all means the desired effect.

3.9 Tab Reference. CF Simple Tab No. 10.

Question. What are the detrimental effects of PL 85-926 (chairman funded)?

Findings. About 70 percent of the chairmen felt that there were no detrimental effects, while the most often mentioned negative effects are inadequacy or inconsistency of funding and tendency of university administration to allow Federal money to carry the program with little administrative support money.

Conclusion. The overall impact of PL funds is hardly detrimental. The few people who did complain about funding did not say that it was in fact detrimental so much as inadequate.

3.10 Tab Reference. CF Simple Tab Nos. 11 and 12.

Question. Did PL funds stimulate university to supply additional funds (chairman funded)?

Findings. About 80 percent of responding chairmen indicated that the PL funds do indeed stimulate additional funds. Specific details are given in CF Simple Tab No. 7.

Conclusion. Apparently PL 85-926 funds have a catalytic effect on money supply to special education programs. Therefore, the gross impact of PL funds is multiplied. BEH and the nation therefore get a good return for their investment.

3.11 Tab Reference. CF Simple Tab Nos. 13 and 14.

Question. What is the impact of PL funding on quality of entering students?

Findings. Of the funded chairmen, 90 percent feel that PL 85-926 funding has increased the quality of entering students. Details are listed in CF Simple Tabulation No. 9.

Conclusion. As with all previous findings on the impact of funds, the overwhelming majority of respondents indicate positive effect of PL85-926.

3.12 Tab Reference. CNF Special Tab No. 1.

Question. What is the vertical movement of special education department in university organizational hierarchy?

Findings. Of all nonfunded departments, 65 percent have moved upwards, 31 percent have remained stationary and only 4 percent have moved downward.

Conclusion. Special education is playing an increasingly important roll. As a result, more and more priority is being given to teacher training programs whether or not they are at institutions directly funded by BEH.

3.13 Tab Reference. CF Figure

Question. What is the effect of PL 85-926 funding on total graduates per year?

Findings. Figure 1 represents the rate of increase in mean number of graduates per year for a 5-year period prior to PL 85-926 funding to a seven year period after funding regardless of reference year. Therefore, each point does not represent any real year, but a composite of all years relative to "first year of funding."

The findings are that schools which were eventually to be funded grew at the relatively slow rate of one more student per year to graduation. However, between the first and second year of funding, they increased on the average of six graduates from their programs. The rate of six per year continued until five years after first funding when the curve levels to between one and two students per year.

Conclusion. There can be no doubt that the impact of PL 85-926 on the growth rate of funded universities has been dramatic. The affect appears to be continuous for about four years of funding, after which the growth rate slows to about the same as before funding. This may be caused by the total output approaching maximum capacity for the school.

Program Area Director Comparisons

3.14 Tab Reference. PAD Cross Tab No. 1

Question. What is your Program Area by funding status?

Findings. Although the mental retardation and speech and hearing programs at both funded and nonfunded universities account for approximately 60 percent of the total programs, it is notable that nonfunded universities stress mental retardation programs to greater extent.

FIGURE 1. EFFECT OF PL 85-926 FUNDING ON TOTAL GRADUATES PER YEAR

Conclusion. The data bears out the expected effect of long emphasis on mental retardation and speech and hearing and the high rate of incidence for these handicaps. The number of programs may also have increased with demand, due to the publicity given to these two areas.

3.15 Tab Reference. PAD Cross Tabs Nos. 4 and 5.

Question. Have PL funds stimulated program growth by university funded status?

Findings. The two major results cited most often are an increase in the funded program's status at the university and an improved public image leading to increased enrollment.

Conclusion. PL funds apparently are responsible for generating "esprit de corps" among program faculty members because of improved credibility with the public.

3.16 Tab Reference. PAD Cross Tabs Nos. 8 and 9.

Question. What was the impact of PL funds on the program?

Findings. This question was answered by funded programs. The two outstanding responses on this item were that the funds allowed the development of new programs while strengthening existing ones by improving staff.

Conclusions. The overwhelming majority of program area directors imply that the impact of PL 85-926 has indeed been positive with respect to its purpose.

3.17 Tab Reference. PAD Cross Tabs No. 11

Question. Have PL funds stimulated the university to supply additional funds?

Findings. The vast majority of PADs imply that it is doubtful if university funding to specific areas was stimulated by PL 85-926.

Conclusions. It is probable that the PADs do not know all of the sources of their funds. Since over 80 percent of funded chairmen said that additional funds were stimulated by PL 85-926, an alternate possibility is that the additional funds are used up in the administration of the department and do not have impact on the programs directly.

3.18 Tab Reference. PAD Special Tab No. 1.

Title. Change in Full Time Faculty Devoting Full Time to Program.

Findings. Although there have been small increases in faculty at the MA and Doctorate levels, the largest increase per annum has been in post masters level faculty. However, this tapers off as reference years approach FY 1968-1969.

Conclusion. Apparently many doctoral students become full time faculty while working for their degree. However, it appears that they may not remain in teacher training after obtaining their degrees. As a result, the number of doctoral level faculty rises very slowly

3.19 Tab Reference. PAD Special Tabs Nos. 2 and 3.

Title. Change in Full Time Faculty Devoting Part Time to Program in Special Education and Part Time Faculty Devoting Part Time to Program.

Findings. The full time equivalent (FTE) of full time faculty who devote only part of their time to special education seems to have remained about the same over the years except for a large influx of post masters people for schools first funded in FY 1966-1967 which have had a mean increase of about six FTE people per year.

Conclusions. In general it seems as though funded special education programs are tending toward full time faculty with a concentration of post MA level teacher trainers.

3.20 Tab Reference. PAD Special Tab No. 4.

Title. Change in Credit Hours Offered in Area by Reference Year.

Findings. The growth in credit hours offered increased from 3.75 per year to 5.87 between 63-64 then the average remains the same until 67-68 when it drops to 1.42.

Conclusions. Maximum effectiveness of funding on increased number of new courses offered is between 2 and 5 years. After that, the department may peak out as it reaches the limits of expansion.

3.21 Tab Reference. PAD Special Tab No. 5.

Title. Percent of Budget Supplied by PL 85-926, University Administration, Other.

Findings. It appears that just after funding PL funds supply an average of about 5 percent of the program budget and this increases at about 1 percent/ year for 5 years when it starts to taper off. On the other hand, university administration adds nothing more to the budget and "other" funds decrease at about the rate that PL funds increase.

Note: The percent of increase or decrease cannot be thought of in terms of dollars because the absolute size of the budget may change while the percent supplied by each remains the same.

Conclusions. PL 85 -926 funds appear to give a boost to the program budgets at first and then to continue support while other sources begin to "dry up." Nevertheless, the funds do not appear to stimulate added administration support.

3.22      Tab Reference.   PAD Special Tab. No. 6.

Title.   Change in the Number of Degrees Conferred by Reference Year.

Findings.   There has been no increase in the number of doctorates and little increase in "other" degrees. However, the increase in number of MA degrees awarded per year becomes greater as reference years approach 1968-69.

Conclusions.   Although there is no mean increase in doctorates conferred, regardless of reference year, funding produces a pronounced impact on the output of MA level graduates. This rate increase becomes smaller each year as the program reaches maximum capacity.

3.23      Tab Reference.   PAD Special Tabs Nos. 7 - 11.

Titles.

7. The Mean Annual Rate of Increase in Applications Completed for Admission to PL 85-926 Funded University Special Education Programs by Degree Level
8. The Mean Annual Rate of Increase in Number of Students Enrolled by Funded Special Education Education Programs
9. The Mean Annual Rate of Increase in the New Student Handling Capacity of Special Education Programs
10. The Mean Annual Rate of Increase in Total Student Enrollments by Sex and Academic Level in Funded Special Education Programs
11. The Mean Annual Rate of Increase in Graduate Student Enrollments by Full Time/Part Time Status and Academic Level in Funded Special Education Programs
12. The Mean Annual Rate of Increase in Physical Plant Made Available to Funded Special Education Programs by the University Administration.

Findings.   For Tabs 7-9, there are almost parallel increases in number of applications, enrollments and student handling capacity. The number of applications stays just above the number enrolled, while actual capacity remains above both of these at first. All three reach about the same rate after 5 years.

Tab 10 indicates an increase in female enrollment at the undergraduate level which is four times as great as that for males for all reference years. The rates are about the same for males and females at graduate levels.

Tab 11 indicates that there is an annual increase in graduate part time students which is twice that for the full time students at both the MA and post MA levels, but the increases are about the same at the Doctoral level.

Student capacity is usually related to physical plant capacity. Tab 12 shows a huge increase in physical plant after first funding and this increase drops off rapidly thereafter.

Conclusions. The fact that student handling capacity increases at a greater rate than enrollment at first may be an artifact caused by the large increase in space allotted to programs right after funding. Area directors may have misinterpreted capacity in terms of space rather than the true capacity to handle students. An additional consideration is that newly funded programs need time to re-organize before they can start thinking in terms of maximizing use of new capacity.

Apparently, "Student capacity" was not adequately defined for the PADs. We do not know if the interrelation included FTE's of part time students or only full time students. If many PADs only indicated increases of full time students, this would account for the seeming subcapacity operation of the program because of the large increase in part time graduate students.

The increase in part time students is an important variable to be considered in the manpower supply chain.

If much of the teacher training capacity in special education is being taken up by part time students (and one can infer, with care, that many of these are female MA students), what does this do to the manpower supply? First, it takes longer to educate a part time student. Therefore, part time students tend to get discouraged and drop out before completing training. The motivation portion of this study points out that many of these "dropouts" go into special education practice anyway, but are not fully qualified.

People who will commit only part time to the study can hardly be expected to have a reliable full time commitment to practice. The motivation study also shows that the vast majority of dropouts are females.

It can be inferred that part time study in special education should not be encouraged, and that some means must be found to attract more full time students into special education. In addition, males should be more actively recruited because of their lower attrition rate.

## PERSONNEL MOTIVATION STUDY

### Student Comparisons

#### 3.24 Tab Reference. SES, SED and RES Simple Tab Nos. 1 and 2.

Question. What was the most important thing that first caused you to consider EH or regular education?

Findings. The three factors most often cited by both special education students (SES) and special education dropouts (SED) were:

- a. Personal contact with handicapped child (11 percent and 17 percent respectively)
- b. Observation of and/or conversation with students or professionals in EH (11 percent and 13 percent respectively)
- c. Personal desire to work with handicapped (10 percent and 9 percent respectively).

The most frequent responses by regular education specialists (RES) were observations of or conversations with students or professionals in education (21 percent), and the desire to teach children and/or young people (12 percent).

Conclusion. In general, both special education students and dropouts first considered the field of EH for the same reasons. The reasons given by RES for first considering becoming teachers are much the same as the reasons given by SES and SED for considering becoming special education teachers. The mediating factor causing consideration of special education specifically seems to have been personal contact with a handicapped child.

#### 3.25 Tab Reference. SES and SED Simple Tab No. 3.

Question. When you entered training in EH, what prior experience did you have with handicapped children?

Findings. About 47 percent of SES and 50 percent of SED had prior experience with the handicapped before entering training. Of those who had prior contact with the handicapped, about one third of both the SES and SED said that this experience was in the home or neighborhood. The next most frequent response for both was contact in school.

Conclusion. The situation of first contacts with handicapped children are the same for both SES and SED. Therefore, knowledge of previous experience cannot be used to discriminate between students who will and will not drop out of training in EH.

#### 3.26 Tab Reference. SES and SED Simple Tab Nos. 4, 5, 6, and 7.

Questions. What was your first source of information about EH (about teaching)? What were the main sources of your information about EH prior to your decision to enter training?

Findings. The first source of information for both SES and SED which was mentioned most frequently was observing or conversing with students or professionals in EH, and college EH department, clinic, or course related to dealing with EH. RES most frequently mention observing and conversing with education students as their first source of information. For both SES and SED, the most frequent responses to the question of main sources of information were the same as those given for first sources of information only slightly fewer respondents in both populations listed EH literature and mass media. One difference noted between SES and SED respondents was that about 18 percent of SES listing any source listed an individual concerned with, if not professionally involved with, EH field as a main source, while only about 9 percent of SED listed these as a main source.

Conclusion. It appears that the personal interest of professionals and/or students in training, when expressed to others, attracts students to the field. These personal contacts are not only the first, but also major, source of information about the field of special education (or regular education).

3.27 Tab Reference. SED Simple Tab Nos 8 and 9.

Question. What is your current major or job speciality (SED)?

Findings. The two largest categories for SED were education for the handicapped (26 percent) and regular education (24 percent). Of all SED, from this 60 percent listed their current major or job speciality as some form of teaching or a related social science field, 33 percent listed fields not related and about 7 percent do not have a present field.

Conclusion. The vast majority of SED's remain in the field of EH. They appear to drop out of training and enter practice before completing their formal course of study.

3.28 Tab Reference. Simple Tabs SES No. 8, SED No. 10, RES No. 10.

Questions. What was your first contact with handicapped children? What contact have you had with handicapped children or adults?

Findings. Both SES and SED most often had their first contact with handicapped children in a school situation. The next largest situation of contact for both SES and SED was at home or in their neighborhood. About 93 percent of RES said they had had contact with a handicapped person. In the case of RES, home or neighborhood was the most frequently mentioned place of first contact, followed by camp and then school. It is interesting to note that none of the RES indicated that they specially avoided contact with the handicapped.

Conclusion. It appears that the situations in which handicapped children are first contacted do not differ to any great extent for SES, SED or RES.

3.29 Tab Reference. Simple Tabs SES No. 9, SED No. 11, and RES No. 11.

Question. What was your relationship to the first handicapped person contacted?

Findings. For SES and SED, the largest number of respondents indicated that their relationship to the first handicapped person contacted was of a preprofessional worker in EH. For SES, this is followed closely by contact with a friend or neighbor who is handicapped. Fewer SED cite friends or neighbors as the first handicapped person contacted. Approximately the same number of SES and SED report a teacher or clinician as their first contact. In the case of RES, about the same number report "teacher or clinician" and "pre-professional work in EH," with lesser numbers reporting friends, neighbors, or secondary relatives.

Conclusion. Although there appear to be minor differences among SES, SED, and RES, with respect to the relationship to the first handicapped person contacted, these differences are too small to be considered significant, in the light of the high rate of nonresponse to these questions.

3.30 Tab Reference. SED Simple Tab Nos. 13, 14, 15, 16, 17, and 18.

Questions. What first caused you to seriously consider leaving training in EH (SED only)? What were the main sources of the information upon which you based your decision to leave training in EH (SED only)? What were the main reasons you left EH training (SED only)?

Findings. Responses to the three questions about were very similar. In general, respondents cite personal reasons, greater interest in another field, and the EH curriculum as reasons for dropping out of special education training.

Conclusion. It appears that the reasons for leaving are based on loss of interest or inability to meet academic standards and/or personal requirements such as emotional stability.

3.31 Tab Reference. SED Simple Range Tab No. 1.

Question. At what age did you decide to leave special education training?

Findings. About 70 percent of SED decided to leave training before 20 years of age, or most likely before the end of their junior year in college. An additional 21 percent dropped out at between the ages of 21 and 25.

Conclusion. The greatest loss of special education manpower in training is at the undergraduate level.

3.32 Tab Reference. SES Simple Tab Nos. 11 and 12.

Question. Do you receive any Federal aid (SES only)?

Findings. Of those answering the question, 58 percent said they receive Federal aid. Types of Federal aid most frequently mentioned were graduate fellowships and undergraduate traineeships. Six percent indicated PL 85-926 funding.

Conclusion. Since a much higher proportion of SES than the 6 percent reporting PL 85-926 funds actually receive these funds, it appears that a large proportion of those receiving PL funds are not aware of their source.

3.33 Tab Reference. SES Simple Tab No. 13.

Question. Do you think you will remain in EH for at least five consecutive years of practice following training (SES)?

Findings. Of those responding to the question, 57 percent indicated that they expected to remain in the field at least five years. A large proportion (28 percent) were undecided, while about 14 percent said they would not. Those who would leave were asked if they would ever return and they responded:

Yes	65%
No	11%
Undecided	24%

Of those who do not expect to remain in practice for 5 consecutive years after completing training, about two thirds plan to return to the field at some later time.

Conclusion. The majority of SES plan to stay in the field for at least five years after training. Of those who do not plan to stay five years, the large majority plan to return. Therefore, the loss in manpower is not as great as would appear at first glance.

3.34 Tab Reference. RES Simple Tab No. 3.

Question. Did you ever train for a career in EH (RES only)?

Findings. About 15 percent of RES had trained for EH at some time.

Conclusion. These findings are consistent with previously mentioned findings indicating a flow of manpower between special education and regular education.

3.35 Tab Reference. SLJ and SED Average-Per. Tab No. 1.

Question. What were the average numbers of semester hours completed before entering EH training (by PL funding status)?

Findings. For SES, there was little difference in the average number of semester hours completed by those receiving funds, although those not receiving funds had slightly more hours. For SED, those receiving PL funds had three times as many semester hours as those not receiving PL funds.

3.36 Tab Reference. SES Simple Tab No. 13.

Questions. Do you think you will remain in EH for at least 5 consecutive years of practice following training? If no, do you think you would return to the field at a later time?

Findings. Of those responding to the question, 5 percent indicated that they expected to remain in the field at least 5 years. A large proportion (28 percent) were undecided, while about 14 percent said they would not remain in the field. Those who would leave were asked if they would ever return and they responded

Yes	65%
No	11%
Undecided	24%

Of those who do not expect to remain in practice for 5 consecutive years after completing training, about two thirds plan to return to the field at some later time.

Conclusions. The majority of SES plan to stay in the field for at least 5 years after training. Of those who do not plan to stay 5 years, the large majority plan to return. Therefore, the loss in manpower is not as great as would appear at first glance.

3.37 Tab Reference. RES Simple Tab No. 3.

Question. Did you ever train for a career in EH (RES only)?

Findings. About 15 percent of RES had trained for EH at some time.

Conclusions. These findings are consistent with previously mentioned findings indicating a flow of manpower between special education and regular education.

3.38 Tab Reference. SES and SED Average Per Tabs. No. 1.

Question. What were the average numbers of semester hours completed before entering EH training (by PL funding status)?

Findings. For SES, there was little difference in the average number of semester hours completed by those receiving funds, although those not receiving funds had slightly more hours. For SED, those receiving PL funds had three times as many semester hours as those not receiving PL funds.

Conclusions. At the time when they decided to enter special education, SED fund recipients were further along in their education than were the SES fund recipients.

3.39      Tab Reference.    SES Cross Tab No. 4.

Question.    What formal education degree held when entered EH training by PL 85-926 funding? Status?

Findings.    Twice as many SES with funding had received their BA degree before entering EH training as compared to SES without funding.

Conclusions.    Of SES, those who received funding tend to have more educational background upon entering EH training than those without funding.

3.40      Tab Reference.    SES Cross Tab No. 5.

Question.    Did the amount and kind of financial aid available help motivate you (by sex)?

Findings.    Only one fourth of the women responding said that the amount or kind of financial aid available had an effect on their motivation to enter EH training while more than one half of the men said the aid had an effect.

Conclusions.    Apparently, the amount and kind of financial aid available is proportionally more effective in attracting men to the field.

3.41      Tab Reference.    SES Cross Tab No. 6.

Question.    Did the amount and kind of financial aid available help motivate you to enter EH training (by type of SES responding)?

Findings.    About one half of students receiving PL funds at funded universities said that financial aid had an effect on their decision to enter EH, while about four fifths of students not receiving funds at the same universities said that aid had no effect. Students not receiving funds at funded universities and students at nonfunded universities were about the same in this respect. Six times as many recipients as nonrecipients at funded universities said the aid was very important in motivating them.

Conclusions.    Apparently, a larger percentage of recipient students at funded universities were motivated to enter the field by PL funds, than nonrecipients at funded universities and students at nonfunded universities. This may indicate that PL financial aid has attracted people who might have chosen another field if the funds were not available in EH.

3.42      Tab Response.    SES Cross Tab No. 7.

Question.    How many miles traveled from home to university to attend special education training (by PL funding - Status)?

Findings.    In general, students receiving funding traveled shorter distances.

Conclusions. Although it might appear that PL funding favors local students, this may, in part, be because graduate students have established permanent residence in the university town.

3.43 Tab Reference. SES Cross Tab No. 9.

Question. When you decided to enter EH did you think it might improve your draft status (by sex)?

Findings. Only about 6 percent of males answering thought EH training would improve their draft status. About one third of the males said that the question was not applicable to them.

Conclusions. The large number of males choosing "not applicable" on this question could be a function of age, physical disability or previous service in the armed forces. It is interesting to note that the majority of men do not enter (or do not admit to entering) EH training to improve their draft status.

3.44 Tab Reference. SES Cross Tab No. 10.

Question. What is your evaluation of the quality of training (by type of SES responding)?

Findings. About one half of all student rate their EH training as "good" regardless of their funding status or the funding status of their university. However, 40 percent of recipients at funded universities rate their education as "excellent", while only about 27 percent of the nonrecipients at the same universities feel the same way. On the other hand, less than 1 percent of recipients at funded universities rate their education as "poor" while 3 percent of nonrecipients and 4 percent of students at nonfunded universities rated their education as "poor."

In general, students at funded universities rate their education higher than those at nonfunded universities.

Conclusions. The perceived educational quality at funded institutions is superior to that at nonfunded ones and the attitude of recipient students with regard to the quality is better than that of nonrecipients.

3.45 Tab Reference. SES Cross Tab No. 14.

Question. Will you remain in EH for at least 5 consecutive years after training (by type of SES responding)?

Findings. The proportion of students who definitely feel they will not remain in the field for 5 consecutive years after training is about the same for all SES types. However, almost twice as many nonfunded students as funded students, regardless of university funding status, are undecided, and a smaller proportion feel that they will definitely remain for 5 years.

Conclusions. Recipients of PL 85-926 funds seem to be a more stable supply of EH manpower.

3.46 Tab Reference. SES Range Cross Tab No. 5

Question. What was your age when you first entered special education training (by sex)?

Findings. More than one half of the women enter special education training by age 19, while only slightly more than one fourth of the men had entered by this age.

Conclusions. Men tend to enter special education training at later ages than women.

3.47 Tab Reference. SED Cross Tabulations

General Statement. The vast majority of SED reported themselves as nonfunded. Only 3 percent of all SED had ever been funded. Therefore, no comparisons can be made between funded and nonfunded SED's. According to classification by university records, 90 percent of SES were nonrecipients at funded universities. The two remaining categories, recipients at funded universities and students at nonfunded universities are both too small to allow comparisons among these three groups. In addition only about 13 percent of the SEDs were males. Therefore, caution should be exercised in interpreting any differences because of sex.

Conclusions. A detailed analysis of the SED cross-tabulation has not been undertaken because of the limitations of data listed above; however, these tabulations have been included in Appendix D because they do contain information of possible use to the BEH.

#### PRACTITIONER COMPARISONS

3.48 Tab Reference. SEP, SEA, and REP Simple Tabs Nos. 1 and 2

Question. What was the most important thing that caused you to first seriously consider EH or regular education as your field?

Findings. Personal contact with a handicapped child and a personal desire to work with the handicapped were two of the three most frequently mentioned reasons for first considering EH by both Special Education Practitioner (SEP) and Special Education Attitree (SEA). The other most frequent response by SEP was their desire to fill the need for trained EH teachers. Although this response ranked high (4th) for SEA, the third most frequent response was an original interest in a related field. In the case of Regular Education Practitioner (REP), the two most frequent responses are a desire to teach children and/or young people and observing or conversing with students or professionals in education.

Conclusions. With only slight differences, both SEP and SEA first considered the field of EH for similar reasons. Again, as in the case of SES, SED, and RES, the mediating factor causing consideration of special education, specifically seems to have been personal contact with a handicapped person.

3.49 Tab Reference. SEP and SEA Simple Tabs No. 3

Question. When you entered training in EH, what prior experience did you have with handicapped children?

Findings. All those answering the question indicate that they had prior experience with handicapped children before entering training. About one-half of SEP and SEA said this prior experience was in a school situation, and about 30 percent cited the home or neighborhood. One difference between the SEP and SEA is that about 12 percent of the SEP mentioned camp or a related situation as prior experience while none of the SEA mentioned this.

Conclusions. There appears to be very little difference between situations of prior experience with handicapped children for SEP and SEA; however, the unique interpersonal experiences with handicapped children that are likely to take place in a camp situation may help sustain commitment to the field.

3.50 Tab Reference. Simple Tabs; SEA and SEP Nos. 4, 5, 6, and 7;  
REP Nos. 6 and 7

Question. What was your first source of information about EH (about teaching)? What were the main sources of your information about EH prior to your decision to enter training?

Findings. The first sources of information for both SEP and SEA which were mentioned most frequently were observing and conversing with students or professionals in EH and college EH departments, clinics, or courses related to or dealing with EH. REP mention most frequently observing and conversing with education students, parents and/or relatives, and college education department or course relating to education as their first source of information. Only slightly fewer respondents in both populations listed EH literature and mass media.

Conclusions. It appears that, as in the case of SES and SED, the personal interest of professionals and/or students in training when expressed to others, attracts students to the field of special education (or education).

3.51 Tab Reference. SEA Simple Tab Nos. 8 and 9

Question. What is your current job title (SEA only)?

Findings. Of those responding to the questions, the three largest categories for SEA were teachers (41 percent), fields related to EH (17 percent) and therapists (14 percent).

Conclusions. The crossover between regular education and special education is quite evident. Many special educators having prior experience in regular education and a background in special education is common among regular educators.

3.52 Tab Reference. Simple Tabs, SEA No. 10, SEP No. 15, REP No. 11

Question. What was your first contact with handicapped children? What contact have you had with handicapped children or adults?

Findings. Both SEP and SEA most often had their first contact with handicapped children in a school situation. The next largest situations of contact for both SEP and SEA are at home or in their neighborhood and in a medical or occupational therapy setting. About 80 percent of REP said they had had contact with a handicapped person. In the case of REP, school was also the most frequently mentioned place of first contact, followed by home or neighborhood. It is interesting to note that of the 20 percent of REP saying they had no contact with handicapped persons, no one said that they had specifically avoided the contact.

Conclusions. It appears that the situations in which handicapped children are first contacted do not differ for SEP, SEA, and REP. The situations mentioned are the same as those already noted for SES, SED, and RES.

3.53 Tab Reference. Simple Tabs, SEA No. 18, SEP No. 12, REP No. 12

Question. What was your relationship to the first handicapped child contacted?

Findings. For SEP, SEA, and REP, the relationship to the first handicapped child contacted was as a teacher or clinician. For SEA and REP, the second most frequently mentioned relationship was a friend or neighbor. In the case of SEP, however, the second most frequent response was as a student teacher. This response ranks fourth for SEA and barely mentioned for REP. Eighteen percent of SEP and 7 percent of SEA mention first contact with handicapped in preprofessional work in EH. The following listing summarizes the responses to this question for both practitioners and students.

	<u>REP</u>	<u>SEP</u>	<u>SEA</u>	<u>RES</u>	<u>SES</u>	<u>SED</u>
Professional contact	37	50	47	22	15	14
Preprofessional contact (including student teaching)	5	22	23	33	34	35
Friend, neighbors, classmates	29	12	18	18	25	18
Family, (immediate and secondary)	17	9	8	28	14	20
Observing and conversing with students and professionals in field	12	7	4	-	10	12

Conclusions. It appears that neither practitioners nor attritees had extensive preprofessional contacts with handicapped children, whereas present students and dropouts have had this experience. This is probably a result of reduced social stigma and increased opportunity for early contact with the handicapped. In addition, regular education students and practitioners, and special education dropouts have a much higher incidence of first contact with handicapped through their family or relatives.

3.54 Tab Reference. Simple tabs, SEP No. 13, SEA No. 11, REP No. 13, SES No. 10, SED No. 12, RES No. 12

Question. Are you or any member of your family handicapped?

Findings.

<u>Tabs</u>	<u>Percent Saying They or a Member of Their Family is Handicapped</u>
SEP	13
SEA	13
REP	6
SES	13
SED	15
RES	13

Except, perhaps for a lower percentage of REP, there are no differences among the groups with respect to the proportion indicating personal or family handicap.

Conclusion. These findings do not support the speculation that a large proportion of people go into the field of special education because of a personal or family handicap.

3.55 Tab Reference. Simple Tabs, SEA Nos.12, 13, 14, 15, 16, 17

Questions. What first caused you to seriously consider leaving practice in EH (SEA only)? What were the main sources of information upon which you based your decision to leave practice in EH? What were the main reasons you left practice in EH?

Findings. Responses to the three questions above were very similar. By far the most frequently mentioned reason for leaving or deciding to leave was to start a family. Other frequently mentioned responses were: disagreement with school policies regarding handicapped children, relocation to school districts not offering EH, and subsalary potential in EH. Although females tend to attrite at a higher rate, a large portion returned after 2-7 years, whereas the males rarely return once they have left.

Conclusions. It appears that high attrition can be expected because of the large percentage of female practitioners who leave for reasons

related to family obligations. An additional source of attrition seems to be professional disagreement with both school policy and administration in the handling of handicapped children. It would be interesting to conduct further research into these professional disagreements regarding the age of the dissenting practitioners and the training and EH experience of the administrators involved. The high attrition rate for women is really an artifact of women leaving the field for a short term to raise a family. Their feelings toward the field are not necessarily negative. On the other hand, men leave because they become dissatisfied with the field.

It would be interesting and valuable to study the rate of return for women attritees in more detail.

Note. Although about 10 percent of present practitioners attrited at some time during their EH career, less than 1 percent did not return. Because of these small numbers, no conclusion can be drawn about reasons given for not returning to the field.

3.56 Tab Reference. Average Per Tab, SEP No. 1, SEA No. 1

Question. What was the average number of semester hours completed before entering EH training (by funding status).

Findings. For SEP, there was little difference in the average number of semester hours completed between those receiving PL funds and those not receiving PL funds, although those receiving had slightly more hours. For SEA, those not receiving funds entered training after completing almost one full college year more than those receiving funding. Only about twice as many practitioners as attritees have been recipients of PL 85-926 funds.

Conclusions. SEP receiving funds were further along toward completing their education than SEA receiving funds when they decided to enter special education training. It is interesting to note that the exact opposite was true in the case of students receiving funding.

3.57 Tab Reference. SEP Cross Tab No. 3

Question. Did you ever train for a career in EH (by type of SEP responding)?

Findings. About 20 percent of special education classroom teachers have not trained for a career in special education. In addition almost 30 percent of special education administrators have not trained for a career in special education. However, only about 10 percent of university teacher trainers have no training for a career in special education.

Conclusions. A relatively large group of special education teachers are not adequately trained for the position. In addition, an even larger percentage of special education administrators are not so trained. This administrative lack of knowledge might be one reason for the attrition caused by disagreement with administrative policy concerning treatment of handicapped children. On the

other hand, the vast majority of teacher trainees have had formal training in special education. This is a necessary requirement for high standards of educational quality.

3.58 Tab Reference. SEP Cross Tabs No. 12 and 13

Question. What is your evaluation of quality of EH training (by PL 85-926 funding status and by type of SEP responding)?

Findings. There are no differences in evaluation of quality of EH training by PL funding status or by type SEP responding.

Conclusions. This finding could be because most funded practitioners were trained before funding had time to affect conditions. Comparing this with attitudes of present students would tend to bare this point out. However, it must be realized that an evaluation of the quality of training done in retrospect, after actual experience, is likely to differ from one given during training.

3.59 Tab Reference. SEP Cross Tab No. 14

Questions. What is your present title (by PL funding status)? What is your present work setting?

Findings. There are few differences between recipient and non-recipients except that about three times as many recipients become special education coordinators and about twice as many become teacher trainers. In addition, a lower percentage of recipients went into public school teaching, while a higher percentage went into college teaching.

Conclusions. Although findings do not suggest radical differences between recipients and nonrecipients, the former may tend to go into administrative and university positions more often.

3.60 Tab Reference. SEP Range Tab No. 2

Question. What was your age when you first entered teacher training (by sex)?

Findings. Of the women responding to the question, 58 percent first entered teacher training by the age of 19, while only 27 percent of the men had entered by the same age.

Conclusions. Men tend to enter teacher training at a later age than women.

3.61 Tab Reference. SEP Range Tab No. 4

Question. At what age did you decide to enter special education training (by type of SEP responding)?

Findings. By age 21, about 40 percent of the special education classroom teachers and 48 percent of the university teacher trainees had decided to enter special education training, while only 9 percent of the administrators had so decided.

Conclusion. Administrators in the field of special education made the decision to enter special education at a later date than either teachers or teacher trainers.

#### SEA GENERAL STATEMENT

3.62 The SEA cross tabulations by PL funding status indicates that only 10 percent of all SEA were funded. Therefore, no detailed analysis can be made using PL funding status as a major breakdown. However, these tables have been included in the final report as they may contain some information useful to BEH. In addition, the overwhelming majority of attritees were female. For this reason, great care should be exercised in the interpretation of cross tabulations by sex.

3.63 Tab Reference. Cross Tabs No. 1 and 2

Question. What is the sex ratio for SED and SEA (ever funded by any source other than self and PL funding status)?

Findings. About 50 percent of all attritees received some financial aid while only about 10 percent received PL 85-926 funds. This is true for both males and females. On the other hand, about 60 percent of the SEP received some funding and about 10 percent received PL 85-926 funds.

Conclusions. In general, PL 85-926 fund recipients exhibit about the same sex ratio as those funded by any source other than self. Funding in general does not apparently play a role in keeping people in the EH field. However, recipients of PL funding tend to remain more than do recipients of other types of funding.

3.64 Tab Reference. SEA Range Tab No. 1

Question. What is your present age (by sex)?

Findings. More than one half of all women SEA are under 30, while only a little more than one fourth of the male SEA are under 30.

Conclusions. The age distribution for SEA by sex is about the same as that for SEP.

3.65 Tab Reference. SEA Range Tab No. 4

Question. At what age did you decide to enter special education training (by sex)?

Findings. About 65 percent of women SEA decided to enter special education training by age 22, while none of the men had so decided.

Conclusions. As in the case of SEP, men decide to enter the field at an older age than women.

3.66 Tab Reference. SEA Range Tab No. 12

Question. At what age did you decide to leave special education practice (by sex)?

Findings. About 45 percent of women attritees had decided to leave practice by age 25, whereas only 11 percent of the male SEA had so decided.

Conclusion. Almost one half of the women attritees had already decided to leave special education before the majority of male attritees had even entered the field.

## MOTIVATION SCALE PROFILES NOS. 1-25 —FINDINGS

3.67 To answer the question, "what makes people enter, remain in, and leave education for the handicapped", this analysis concentrates on the overall picture of motivation rather than on subset analysis.

3.68 It was found that there are definitely several factors which are key features in attracting people to the field. It appears that about the same factors both people who will remain in the field and those who will drop out. The difference is that the magnitude of the motivation to enter training is higher for those who remain. In addition people who later drop out (SED, SEA) show that they had many misconceptions about the field. Their motivation values<sup>1/</sup> drop drastically across the board soon after getting a taste of reality in study or practice. In general, those who remained in the field had increases and decreases in satisfaction for different aspects, but an overall increase in the satisfaction they obtained from their jobs. For example, mean satisfaction over all 21 aspects of practice for the decision to enter training for SEPs was 3.07 while for SEAs it was slightly higher, 3.12. This should be thought of as the amount of satisfaction they expected to obtain by going into education for the handicapped.

3.69 The amount of satisfaction actually obtained by each group is given by the mean satisfaction score for all 21 aspects of practice, for the decision to remain in EH for SEPs (3.43), and for the decision to leave EH for SEAs (2.22). Note that the SEP overall satisfaction increased 0.36 points while that for SEAs dropped 0.90 points.

3.70 Table 1 gives a sample of the most and least satisfying factors in education for the handicapped except when entering the field. The factors with high scores are most responsible for attracting people to the field.

3.71 To determine what causes people to leave the field, Table 2 presents the lowest scores for SED and SEA at the decision to leave training and practice respectively. This table leads to the following conclusions:

3.72 It appears that the more abstract attractions such as the relevancy of teaching the handicapped to personal values and to society, combined with the delight one gets from working with handicapped children, are the most important factors in attracting people to the field. However, it also appears that many people who would like to satisfy the benevolent self-image of "teacher-healer" are not willing to suffer the long training period and the often difficult course work. (It was noted that this is particularly true in speech and hearing where a masters degree is required to attain professional status.) As they train, their shining, unrealistic image of a career in special education begins to

---

<sup>1/</sup> See discussion of Motivation in Section IV. Interpretation of the motivation scale profiles will be more easily understood after a review of motive theory in Section IV.

TABLE 1  
FACTORS EXPECTED TO CAUSE THE MOST AND LEAST SATISFACTION  
WHEN ENTERING TRAINING IN EH

	Most Satisfying (above 5.00)		Least Satisfying (below 1.42)	
	Factors	Scale Score	Factors	Scale Score
SES	Interest Level of Course Material in Training	7.33	Difficulty of Work	1.32
	Quality of Training	6.20	Length of Training Required	1.41
	Working with Handicapped	8.70	Peer Status	1.14
	Relevancy of Work to Personal Values	8.43	Leisure Time	1.10
	Social Relevancy	6.30		
SED	Interest Level of Work	6.72	Length of Training	.46
	Quality of Training	5.01	Financial Aid Available	.87
	Relevancy of Work to Personal Values	7.83	Difficulty Level of Work	1.20
	Working with Handicapped	7.71	Amount of Time for Leisure	.44
	Social Relevancy	5.71	Status with Peers	1.27
			General Working Conditions	1.32
SEP	Social Relevancy	5.37	Leisure Time	.37
	Working with Handicapped	7.85	Starting Pay	.90
	Relevancy to Personal Values	7.86	Peer Status	1.32
			General Working Conditions	1.35
SEA	Working with Handicapped	8.31	General Working Conditions	.23
	Relevancy to Personal Values	7.47	Peer Status	.24
	Social Relevancy of Work	5.22	Starting Pay	.79
	Ease of Finding a Job	5.08	Prestige	.94
			Leisure Time	1.08
			Public Image	1.17

TABLE 2  
FACTORS IN EH WHICH WERE MOST DISAPPOINTING  
AT DECISION TO LEAVE

Sample	Factors Rated Under 1.00	Scale Score
	Factors	
SED	Financial Support Available	.77
	Difficulty Level of Work	-0.33
	Length of Training Required	-0.87
	Work Hours in EH	.86
	Work Conditions in EH	.83
	Amount of Time Left to Leisure	.53
	Difficulty Level of Work Itself	.67
	Lack of Peer Status	.92
	Time Left to Spend with Family After Work	.71
SEA	Rate of Advancement in EH	.18
	Prestige Associated with Work	-1.08
	Working Conditions	-3.11
	Peer Status	-0.24
	Starting Pay	-0.13
	Salary Potential	.89
	Public Image of EH Teacher	.26

tarnish. They become aware that their peers do not look up to them quite as much as expected, so they drop out of training. The dropouts probably will try regular education and do quite nicely as the public image of the regular education teacher is fairly accurate and well established.

3.73 The public image of the Special Educator is however a different matter. Very little publicity is given to wide-spread, difficult working conditions, both physical and administrative. The low pay is not publicized. The image is vague but somewhat glamorous and above all unrealistic.

3.74 The Peace Corps had a similar problem, in that their working conditions were poor and their pay low (a far worse situation than exists in education for the handicapped). They reduced their dropout rate by emphasizing a public image which was truthful about conditions, pay, etc. This served to discourage people who were not equipped to endure the conditions prerequisite to the rewards. Perhaps a more realistic image would help attract more students to education for the handicapped, who will then not become disillusioned.

3.75 Very often a student will stay on through training, hoping that practice will be more rewarding. Nevertheless, once in practice, the low salary, poor working conditions, and lack of prestige are enough to overcome all love of working with children, and they become attritees.

3.76 On the brighter side, the majority of people attracted to education for the handicapped have a fairly realistic image of the field when they enter. They know what will be required of them and they complete training and enter the field. Those who remain seem to find more and more satisfaction from their work despite what is to others low pay, poor working conditions, and little prestige. Their satisfaction in contributing to society and especially to children makes most draw-backs unimportant.

## IV. DESCRIPTION OF STUDY ACTIVITIES

### INTRODUCTION

4.1 This section details the activities which occurred from inception of impact study through its completion. The objective for each task, as well as the procedure for its accomplishment and the results obtained from each task, are discussed.

4.2 This description is presented so that the actions necessary to accomplish the study may be fully understood, and so that the results may be evaluated in the light of the procedures necessary to accomplish them.

### OVERVIEW

4.3 In 1953, Congress first allocated money for research in the field of education for the handicapped. Since that time, there has been an ever-increasing amount of Federal aid specifically allocated to the field.

4.4 Public Law (PL) 85-926, enacted in 1958, was the first congressional attempt to participate in the development of the supply of personnel for the education of the handicapped. However, the law was limited to the provision of funds only for preparation of administrative personnel in education of the mentally retarded. PL 87-276, enacted in 1962, provided funds for the preparation of teachers of the deaf. Thus, Congress began to expand its involvement in special education.

4.5 In 1963, PL 88-164 amended PL 85-926 and combined it with PL 87-276. PL 85-926, as amended, granted authority to provide Federal aid to all education for the handicapped programs. The purpose of these appropriations was to increase the supply of special education manpower.

4.6 Some previous studies have investigated the utilization of funds <sup>1/</sup> and the status of Education for the Handicapped training programs. <sup>2/</sup> One study was conducted to evaluate the impact of graduate fellowships in one area of funding. <sup>3/</sup>

4.7 The Phase IV study has for its objective the evaluation of the impact of PL 85-926 on all areas that train teachers of the handicapped and the determination of those factors which motivate personnel who are, or have been, associated with this area of education.

4.8 The tasks prescribed for this Phase IV study have been applied toward the accomplishment of each of the two major objectives. For the convenience of the reader and the orderly presentation of study activities, the objective efforts and the results of each task are discussed individually for the University Impact Study and for the Personnel Motivation Study.

#### UNIVERSITY IMPACT STUDY

4.9 The overall objective of this part of the Phase IV study was to assess the impact of PL 85-926 on special education manpower. To accomplish this objective, the tasks described in the following paragraphs were performed.

##### Study HEW PL 85-926 Records

4.10 Objective. The purpose of this task was to evaluate the records that exist in the HEW PL 85-926 file to determine the availability and accessibility of university information concerning the impact of PL 85-926 on the characteristics of their programs for the training educators of the handicapped.

4.11 Procedure. Four of the nine BEH areas of handicapped were selected for review, and one institution within each of these areas was selected and traced back through the years for which it applied for funding. The following records were reviewed:

<u>Area</u>	<u>Institution</u>	<u>Years</u>
Visually Handicapped	San Francisco	1965 through 1969
Mental Retardation	U. of Illinois	1965 through 1969
Emotionally Disturbed	U. of Michigan	1964 through 1969
Learning Disabilities	Peabody	1967 through 1969

---

<sup>1/</sup> Charles J. Horn, Federal Aid for the Preparation of Personnel to Teach the Handicapped. Doctoral Thesis; University of Illinois, 1969.

<sup>2/</sup> Herman L. Seattler, Students in Training Programs in the Education of the Handicapped. Doctoral Thesis; University of Illinois, 1969.

<sup>3/</sup> J. Hebel, An Evaluation of the Impact of the Graduate Fellowship Program in the Education of the Mentally Retarded. Authorized Under PL 85-926, Washington, D.C., Bureau of Education of the Handicapped, mimeographed, 1968.

The investigation revealed that the bulk of the information supplied by institutions on their applications is in narrative form. Because the intent of the institutions supplying the information is to obtain Federal funds to continue or expand their programs, the information given on faculty, facilities, and support is very positive. It would be difficult to use such information to make comparisons with other institutions or to develop profiles of programs at institutions. Furthermore, because it is in narrative form, there is little consistency from one school application to another in the manner in which information is presented or the elements of the programs are stressed. Finally, many of the applications contained 20 or 30 or more pages of narrative describing their programs and, if specific data items were to be sought in these applications, the requirement for research staff and time would be heavy. There is a lack of consistency of information contained in the applications from year to year partly because the application format was modified in 1965, 1967, 1968, and 1969. The problem is not that information is "lost" from year to year, but that the information is difficult to locate and retrieve.

4.12 Results. It was concluded that the extraction of specific data from these files would not only be very time consuming in terms of calendar time, but would result in the uneconomical use of manpower as well. The information obtained would not be complete and alternate methods would still have to be employed to obtain the complete set of data necessary to perform the study. For these reasons, the files were not further considered as a source of data for the University Impact part of the study.

#### Determine Information Requirements

4.13 Objective. The objective of this effort was to identify and isolate the university parameters needed to aid in the selection of PL 85-926 impact study approaches and analyses.

4.14 Procedure. A panel consisting of special education manpower training experts and the ORI staff was convened to discuss, investigate, and isolate those characteristics which could be used to measure the effect of PL 85-926 funding on university special education programs. The consultants on this panel were:

- a. Dr. Samuel Ashcroft, Chairman of Special Education at Peabody College
- b. Dr. Herbert Goldstein, Chairman of Special Education at Yeshiva University
- c. Dr. Robert Henderson, Chairman of Special Education at the University of Illinois

- 4.15 Guided by the criteria that the information requirements be
- a. Useful in operationally defining the growth and quality of programs for the training educators of the handicapped
  - b. Easily, clearly, and accurately interpreted by those who will provide the information
  - c. Sensitive to the effect of funding
  - d. Relevant to BEH planning efforts.

the panel developed a preliminary listing of relevant parameters. This initial material was reviewed in a series of interactions between ORI and BEH which resulted in the solidification of the information requirements. Preliminary questionnaire items were then written. Because the phrasing of a request for information is subject to misinterpretation by the individual respondent, items requesting objective information were backed up by qualifying attitude-type questions. These were sent to the consultants for their review and comments. This was an iterative process until those involved in the review process were satisfied that the items of information required were complete and understandable.

4.16 Results. The inclusion of both university representation and the participation of BEH in the investigation, analysis, and review process resulted in the finalization of information requirements that would be both useful to BEH and collectable from the universities. It provided a sound foundation upon which to base the development and selection of study approaches.

#### Select Study Approaches

4.17 Objective. The purpose of this effort was to analyze the alternative approaches that were available and select that approach which would most satisfactorily accomplish the measurement of PL 85-926 impact on universities.

4.18 Procedure. PL 85-926 may be thought of as the treatment portion of a large experiment. The effect of the treatment is the impact of the law on special education manpower supply.

4.19 There is no direct way of measuring such impact; it has to be determined indirectly by inference from changes in the quality and quantity of special education students being graduated from the universities. A further consideration in a plan to measure the impact is that there are factors other than PL 85-926 which influence the growth of special education programs. These other factors must be held constant so that changes resulting from the influence of the law can be isolated.

4.20 A preliminary study plan was evolved on the basis of obtaining data that would produce maximum study results. Data would be collected from each university in the sample for a series of consecutive years, preceding and following the use of PL 85-926 funds. This should isolate changes resulting from the funds from those not caused by funds. The growth rate for unfunded years could be compared with that of funded years and changes could be measured. Data could be collected on a random sample or on the entire population depending on how many data sources were identified.

4.21 Some of the information needed could be found in the HEW PL 85-926 file, and additional data could be obtained directly from the universities. To determine the feasibility of this preliminary plan, an information content analysis was made. As described previously in the discussion of the HEW file, it was concluded that information from this source would be too costly to collect. This condition emphasized the need for developing a technique for collecting data directly from the universities. Unfortunately, the large volume of data needed would place a heavy burden on already overloaded university personnel. This, of course, would seriously affect the rate of response and result in an inadequate supply of information.

4.22 The study plan was modified by paring down the amount of data required from the universities but still providing sufficient data for impact analysis. Instead of collecting data for a series of years before and after funding, this requirement was reduced to obtain data from one year prior to funding and one year after funding, preferably the most recent year for which complete information was available. However, one question would still require the previous continuum of data over time. This question would provide a rate of change indicator which could be used to simulate the rate of change for other parameters. Although this plan greatly reduces the amount of data required from the individual universities, it also creates the requirement for a control group of nonfunded universities. This group would provide data against which the funded universities could be compared. This comparison group would simulate the rate of growth that funded universities would have experienced had they not received PL 85-926 funding.

4.23 Questions would be developed that would thoroughly explore the information requirements. These questions would be assembled into a questionnaire format and directed at knowledgeable university personnel such as department chairmen, registrars, and program area directors.

4.24 Results. As a result of an examination of the study problems and approaches, the initial concept was modified and a plan was evolved which would utilize the university as the source of data but would minimize the burden on them by applying simulation techniques in lieu of large volumes of data.

#### Determine Availability of Samples

4.25 Objective. The effort in this task was centered on the identification and accessibility of the populations from which the samples were to be drawn.

4.26 Procedure. A literature search was undertaken to identify all universities in the United States which offer programs for training personnel in the education of the handicapped. Many universities offer such programs within their Department of Special Education, but some universities offer speech and hearing programs as a major, in a department other than special education departments. The identification process therefore had to include this possibility.

4.27 Physical education and recreation is a growing area of special training that some authorities consider part of special education.

4.28 In considering the possibility of including these program areas for inclusion in this study, the following points were reviewed:

- a. The physical education and recreation programs were only recently initiated under PL 85-926. Approximately 13 planning grants were being funded in this area, and the only type of traineeship or fellowship grant being funded was the summer session traineeship. It is deemed unlikely that regular grants will be made within the next 2-3 years.
- b. Since this area is funded under PL 88-164, and this study is intended to assess impact of PL 85-926, those programs probably fall outside the scope of this study.
- c. The program is in its initial stage of development as a unit of BEH in that planning grants are only being funded now and no regular traineeships and fellowships are being funded. The number of respondents to this study would probably not be sufficient to adequately assess any aspects of the program. At best, only initial impact of the program development funds could be examined, and this would probably be premature in terms of the ultimate objectives of this program development grants.

4.29 Based upon this information, it was determined that physical education and recreation programs would be excluded from this study.

4.30 A fairly complete listing of schools offering special education and/or speech and hearing programs was contained in the previously cited "Students in Training Programs in the Education of the Handicapped." By referring to the BEH Scholarship Program Directory, the list of universities could be divided into funded and nonfunded schools. A further subdivision of the funded universities list resulted in a breakdown as follows:

- a. Universities with speech and hearing programs within the special education department
- b. Universities with speech and hearing programs only
- c. Universities with speech and hearing programs separate from the special education program.

4.31 A similar subdivision was accomplished on the nonfunded list using an American Speech and Hearing Association publication.<sup>4/</sup> Such a clarification was necessary so that when the survey was undertaken, those universities having separate special education departments and speech and hearing programs could receive a questionnaire for both facets of their training programs.

4.32 After the universities were properly identified, it was necessary to obtain some specifics such as

- a. Name of department chairman
- b. Name of department
- c. Number of program area directors
- d. Address of the university.

4.33 With identification of the sample complete, each department chairman was identified with a code number that would correspond with a similarly identified survey questionnaire that would be sent to him.

4.34 Results. As a result of the effort in this task, the sample population was identified and refined, and a mailing list of 508 potential survey respondents (departments) was prepared.

#### Develop Questionnaires

4.35 Objective. The purpose of this task was to:

- a. Develop questionnaires that would request information in a clear and concise format that was germane to the information requirements of the University Impact Study.
- b. Pretest the questionnaires to ascertain the validity, applicability and answerability of the questions.

---

<sup>4/</sup> American Speech and Hearing Association, A Guide to Graduate Education in Speech Pathology and Audiology, 1969.

4.36 Procedure. A series of questions were prepared that requested a range of information about the university programs for training educators of the handicapped and the impact of PL 85-926 on these programs. Because it is not always possible to quantify some of the information requested, many of the questions asked for opinion-type answers. The responses to this type of question were classified in response categories, coded, and tabulated for final analysis. The phrasing and intent of these questions were thoroughly reviewed by the aforementioned panel of consultants and BEH personnel. Since the universities had been subdivided by the organization of their special education/speech and hearing programs, as discussed in the previous task, it was determined that a questionnaire should be developed that would direct the request for information to the source best qualified to provide the information. It was decided that three separate questionnaires should be developed; one form for the chairman of special education and/or speech and hearing department at PL 85-926 funded universities; one form for the chairmen of similar programs at nonfunded universities; and a third form for the program area directors at all universities in the sample. This procedure has the advantage of phrasing some of the questions according to the type of school to be surveyed (funded and nonfunded) and also of distributing the respondent workload over several staff members (the chairman and his program area directors) according to their potential for providing the level of detail required.

4.37 The questionnaire format directed at the chairman requested information of a more general nature regarding his department and its relation to the university administration. Such information as source of funding, department budget, overall size, etc., were typical of the level of detail requested in this questionnaire format. The format for funded and nonfunded program chairmen were comparable except that questions relating directly to PL 85-926 funding were deleted from the nonfunded university form. The format intended for use by the program area directors requested a level of information that those more close to the actual program application could best provide. Data pertaining to semester hours, physical area, and faculty and student body parameters were typical of this format level.

4.38 After the initial questionnaire formats were prepared, they were subjected to a pretest program. The questionnaires were mailed out to three universities receiving PL 85-926 funds and five nonfunded universities. Each questionnaire was accompanied by a critique sheet. This sheet requested comments by the pretest respondents regarding the clarity of questionnaire instructions and questions and the difficulty encountered in answering the questions. The format of this critique form is shown in Figure 2. After all pretest returns were received, the critique comments were compiled by question and format and evaluated. Specific questions were modified as necessary, and the final form of the questionnaires was then approved and printed.

You have received this questionnaire as part of a pretest, prior to a national survey. We would appreciate your response to the following questions after you have completed the questionnaire. Your response will help improve the questionnaire prior to the national survey.

Please comment on the following:

1. Were you able to follow the instructions easily? Yes\_\_\_No\_\_\_  
If no, what instructions were not easily understandable? What improvements would you suggest?

---

---

---

2. Were all questions clearly understandable? Yes\_\_\_No\_\_\_  
If no, note each question which was not clear and the nature of the problem (if possible).

---

---

---

3. Were any questions especially difficult to answer? Yes\_\_\_No\_\_\_  
Please note question number and explain the difficulty. Is there any way in which we could make these questions easier to answer?

---

---

---

4. Do you have any other comments or suggested revisions to this questionnaire?

---

---

---

FIGURE 2. CRITIQUE SHEET ATTACHED TO IMPACT AND  
MOTIVATION PRETEST FORMS

4.39 Results. The work performed in this task resulted in the preparation of questionnaire forms that would be distributed to the universities to collect data relevant to the measurement of the impact of PL 85-926 funds. The final formats, samples of which are contained in Appendix B, consisted of:

- a. Questionnaire Form CF, to be completed by department chairman of PL 85-926 funded universities
- b. Questionnaire Form CNG, to be completed by department chairmen of nonfunded universities
- c. Questionnaire Form PAD, to be completed by program area directors.

#### Conduct Survey

4.40 Objective. The objective of this task is to distribute the survey questionnaires and follow up on the distribution list to ensure an adequate supply of responses to provide sufficient data for analysis.

4.41 Procedure. The procedure used to accomplish the work in this task involved the following steps:

- a. Cover letter preparation
- b. Distribution of questionnaires
- c. Follow-up of nonrespondents
- d. Document processing.

Each step in the process is described in the following paragraphs.

4.42 Cover letter preparation. Since the study was sponsored by BEH, it was considered advisable to include a cover letter with each questionnaire package, signed by the BEH Project Officer. This letter introduced the study, its purpose, and the contractor responsible for its performance. In addition, a series of cover letters were prepared by ORI which gave specific instructions to the recipients on how to complete the questionnaire. The precise content of the letter depended upon the funding status and organization of the training programs at the university. Individual cover letters were designed for the following sets of conditions:

- a. Department chairman where speech and hearing programs are not separate from the Special Education Department or where only speech and hearing programs are offered. PL 85-926 funds are received. (Cover Letter Form A-f)

- b. Same as above except that no PL 85-926 funding is received. (Cover Letter Form A-n)
- c. Special education department chairman where the speech and hearing programs are separate from the Special Education Department. PL 85-926 funds are received. (Cover Letter Form B-f)
- d. Same as above except that no PL 85-926 funding is received. (Cover Letter Form B-n)
- e. Speech and hearing chairman where speech and hearing programs are separate from the Special Education Department at the university. PL 85-926 funds are received. (Cover Letter Form C-f)
- f. Same as above except that no PL 85-926 funding is received. (Cover Letter Form C-n)
- g. Program Area Directors at all universities, both funded and nonfunded. (Cover Letter Form PAD-C).

4.43 Copies of the BEH cover letter and the ORI cover letter are included in Appendix B.

4.44 Distribution of questionnaires. During this phase of the survey procedure, the questionnaires were distributed to 328 departments representing the total population of 254 universities receiving PL 85-926 funding. In addition, a control group of 180 departments representing 151 nonfunding universities were recipients of the questionnaires. As previously discussed, some universities have speech and hearing programs separate from the Special Education Department. To assure thorough coverage of the field, questionnaires were sent to both; thus some universities were recipients of more than one questionnaire, and therefore have a double entry in the sample size.

4.45 The questionnaire package sent to each chairman consisted of the following items:

- a. A BEH cover letter
- b. An ORI cover letter
- c. One chairman questionnaire (CF for funded, CNF for nonfunded)
- d. One set of cover letters (PAD-C) and one set of questionnaires (PAD) for each Program Area Director

- e. One set of sealable unaddressed envelopes (one for the chairman and one for each Program Area Director)
- f. One large self-addressed return envelope.

4.46 The chairman was asked to complete the CF (or CNF) form himself and distribute the PAD form, with envelopes, to his Program Area Directors for completion. To assure unconstrained responses and candid opinion of the questions in the PAD questionnaire, it was necessary to provide the means for keeping the responses confidential. After the Program Area Director completed his form, he could seal it in an envelope and return it to his department chairman. The department chairman would then enclose his completed questionnaire, along with those from his Program Area Directors, in the large envelope and return it to ORI. The Department Chairman was requested to contact ORI by collect telephone call if he had any questions.

4.47 The initial mailing of questionnaires was completed on 1 May 1970 after experiencing an extended delay caused by the need for Bureau of the Budget approval of the questionnaire format.

4.48 Follow-up of nonrespondents. The follow-up of nonrespondents consisted of a two-stage "encouragement" of the chairmen to complete and forward their questionnaires. The first stage involved a follow-up letter to the chairmen, approximately three weeks after the initial mailing, reminding him of the questionnaire and requested his cooperation in sending in the completed questionnaire. There was a substantial telephone response to this effort indicating that some of the questionnaires did not reach the addressee. New packages were sent out immediately. To maintain uniformity of instructions, all questions asked by the chairmen over the telephone were answered according to a standard format. This format was expanded as new questions and answers arose.

4.49 The second stage of the follow-up process consisted of a telegram from the BEH Project Officer. This was sent approximately two weeks after the follow-up letter. An even greater telephone response was received as a result of this follow-up claiming nonreceipt of the initial mailing. Again, questionnaires were rushed out to those who called.

4.50 Document processing. As questionnaire forms were returned to ORI by the chairmen, they were logged in and the information was coded for tabulation.

4.51 Each questionnaire form that was sent out contained a serialized code which facilitated the identity of the recipient. The receipt of the completed questionnaire was logged in by date of receipt. This procedure was necessary to help identify and control statistical bias in the data analysis.

4.52 The raw data, as it appears on the completed questionnaires, is of two types:

- a. Quantitative (objective)
- b. Qualitative (subjective).

The quantitative data, in most cases, can be keypunched directly from the questionnaire. However, the qualitative data comes in the form of subjective prose responses. There was no prescribed response structure, so these items are difficult to code.

4.53 The initial coding structure was developed by reviewing 100 questionnaires and constructing a list of possible response categories. This gross list was reduced by combining similar categories. A code was then assigned to each response category on the list. As actual coding of questionnaires progressed, new categories were added when necessary.

4.54 Results. The results of the data collection effort were less than desired in terms of number of responses received. Some nonresponse must be anticipated in any survey, but initially it was believed that a survey among interested professional personnel would yield a much higher rate of return than was actually experienced. Some of the unusual circumstances that contributed to this problem were:

- a. The initial study plan scheduled the survey to take place in late winter at a time when campus activity is at a routine pace. The lengthy review time (5 December 1969 to late April 1970) to secure National Center for Educational Statistics and Bureau of the Budget approval of the questionnaire format dropped the survey timing back to very late in the school year.
- b. May is a poor month to initiate a survey requiring the cooperation of university staff, since it comes at the conclusion of the school year which is a peak-load period for chairmen and Program Area Directors. Immediately following this is the summer break period which takes many of the staff personnel away from campus.
- c. The late spring of 1970 was a period of very heavy campus unrest. Many schools closed early, and the university staff was deeply involved in abnormal activities.
- d. This period of time is also the time in which new staff assignments are made. New chairmen were unable to obtain the requested information.

- e. In spite of extending the follow-up period an extra month, the total time frame for completing the survey was too short to effect a high rate of return.

4.55 A random sampling of nonresponding universities verified the foregoing causes as being primary contributors to the low rate of response.

4.56 Extensive quality control measures were taken to reduce avoidable errors in coding and processing to a minimum. As a result, the largest source of error was the respondent himself. Although instructions were carefully edited and pretested before they were adopted, the greatest single source of error was improperly completed questionnaires. Overall respondent error is estimated at about 20 percent on the objective data. This has been reduced by recoding and computer edit to an overall estimated 2 percent.

4.57 The open-ended type questions required complex coding decisions. Many responses were compound in content which required that they be separated into component parts so that each component could be coded. The coding categories were extensive, often having only subtle differences.

4.58 The following list shows estimated error rates for each stage of processing:

Error by Source (%)

<u>Form</u>	<u>Respondent</u>	<u>Coder</u>	<u>Keypunch</u>	<u>Total</u>
CF	2	2	1	<5
CNF	3	2	1	<5
PAD	2	1	1	<4

4.59 In summary, the following percentages of responses were received as a result of the initial mailing and each of the follow-up stages:

Before follow-up letter	30%
Between follow-up letter and follow-up telegram	28%
After follow-up telegram	42%

4.60 The percent of questionnaires that were returned was:

- a. From departments receiving PL 85-925 funds -  
67.38 percent of those sent to funded departments

- b. From departments not receiving PL 85-926 funds - 44.69 percent of those sent to unfunded departments.

### Analyze Data

4.61 Objective. The objective of this task is to summarize the data collected, analyze it, and derive some conclusions based upon the survey findings.

4.62 Discussion of Data Content. Care must be exercised when interpreting data from the University Impact Study. The many limitations of the study are due to three factors:

- a. Relatively low response rates (44 percent for nonfunded universities and 67 percent for funded universities)
- b. Unavailability of accurate objective data
- c. Poorly followed instructions.

4.63 The concern with low response rates is that the departments that did return their questionnaires do not necessarily represent all universities. The greater the nonresponse, the greater the sampling bias is likely to be. The previously described follow-up techniques were used in order to increase the response rate. Nevertheless, only about half of the universities responded.

4.64 The accuracy of data on returned questionnaires varies from program to program and from question to question. The reasons for this variance range from lack of motivation to lack of data. A survey of more than 200 department chairmen indicates that the data should be thought of as the "ball park estimate" variety. This is not a great drawback, however, because all of the data will be presented in the form of averages.

4.65 The survey also brought out the point that many of the "candid" opinions are not as candid as expected. Almost 15 percent of the chairmen interviewed stated that they completed one or all of the PAD forms (other than their own) because one or more of the Program Area Directors was not available at the time of the survey. As a result, the range of manifested opinion is somewhat restricted. Nevertheless, this data remains highly useful in identifying and roughly quantifying opinion.

4.66 Impact Limitations. It must be realized that the questionnaires used in this study have a very general format that can reflect conditions at many universities. Nevertheless, the questionnaire construction itself causes several types of distortion. For example, when requesting what percentage of the budget is spent on what items, it was assumed that the average chairman had the kind of program budgeting system that would allow him to answer this question.

However, in some cases budgets are so complicated that data for this question are difficult to obtain and their interpretation is somewhat ambiguous.

4.67 Another difficulty that must be considered is that some teacher training institutions may have students specifying majors in their freshman year, while others declare majors in their junior year. Some schools have only graduate majors in special education, while others have only undergraduates.

4.68 The purpose of aggregating all of this data from so many varied sources is to get "ball park" estimates, upon which to compare funded and nonfunded universities. If one assumes that the inconsistencies are randomly distributed in both populations, these differences can still be assigned to impact of PL funds.

4.69 Several items on some questionnaires have been deleted from the data records because they were improperly completed. The most common sources of data loss were:

- a. Improper use of reference year
- b. Responses did not correlate with the question asked
- c. Contradictory objective data entries.

It is estimated that with the exception of question number 17 on the CF questionnaire, the data lost average less than 1 percent per question. As a result, about 95 percent of the questionnaires received are represented in that tabulation.

4.70 Analysis of Survey Data. The respondents and nonrespondents of the University Impact Study are considered as separate populations, and the distributions are evaluated based on several descriptor variables. This evaluation is necessary in order to understand the nature of the bias due to nonresponse.

4.71 Information relevant to the following descriptive variables was obtained for every university in the sample: <sup>5/</sup>

- a. Geographic location
- b. Type of governing control
- c. Year founded
- d. Total number of teachers employed
- e. Total number of students enrolled.

4.72 The results, as they pertain to each of these variables, are presented in tabular form in Appendix A. In each case, the respondent percentages represent the ratio of responses by category to the total responses. Similarly, the

---

<sup>5/</sup> Sources: 1969 World Almanac and Book of Facts, New York, 1969.

nonrespondent percentages represent the ratio of those universities in each category who did not respond to the total of the nonrespondents. Those universities from which two responses were possible, but from which one was received (e.g., universities having separate special education and speech and hearing departments) are included in both the respondent and nonrespondent populations.

4.73 In that each of the variables may have an influence on the factors affecting special education personnel training and supply, an  $X^2$  comparison of the two populations was made for each variable. A statistically significant difference between the questionnaire respondents was found for all five variables. This indicates that bias exists, and thus caution should be used when applying the results of this study to universities in general.

4.74 A close examination of the tables can be used to estimate the impact of this bias on the particular study variable being considered. For example, the largest and smallest schools are less responsive than the middle-sized schools (in general). This may have bearing on the interpretation of averaged objective data concerning output. The user is reminded that these differences do exist and is urged to consider their possible influence when applying the data. Additional survey data tabulations are contained in Appendix D.

4.75 Findings and Conclusions. The findings and conclusions for the University Impact Study are discussed in Section III of this report along with those of the Personnel Motivation Study.

#### PERSONNEL MOTIVATION STUDY

4.76 It is safe to assume that Congress intended, at least, a twofold purpose for PL 85-926. The first, discussed earlier in this section of the report, was to increase the quality and capacity of the institutions preparing people to teach the handicapped.

4.77 The second purpose was to attract manpower to these improved programs by granting traineeships and fellowships to qualified students. What role has PL 85-926 played in attracting manpower to educate the handicapped? Are there other ways of attracting manpower to the field?

4.78 This study seeks answers to these questions:

- a. Evaluate the present effectiveness of the law in attracting and retaining personnel in the field
- b. Suggest promising alternatives to the law.

The full range of factors that cause people to enter, stay in, or leave the field will be investigated.

## Use of BEH Records

4.79 Objective. The purpose of this task is to examine the BEH records on recipients of PL 85-926 funds to determine their usefulness as a source of names for a Personnel Motivation Survey mailing list.

4.80 Procedure. To identify and study a sample of students and practitioners who are/were recipients of grants under PL 85-926, a list was prepared from BEH files. Approximately 19,000 different names were identified and keypunched onto data cards along with the following information:

- a. University attended
- b. Geographical location of school attended
- c. Grant year
- d. Academic level
- e. Area of specialization.

4.81 A computer program was used to alphabetize the names and print a directory of PL 85-926 grant recipients. The directory, unfortunately, was of little use in identifying recipients for the following reasons:

- a. Only about half of the actual recipients were on file at the time of search.
- b. A high proportion of female students married and changed surname.
- c. Practitioner and student mailing lists received from universities were in non-alphabetic order making the correlation of these lists with the BEH list very difficult. The search cost would be higher than the alternative of having each university identify all its recipients.

4.82 Nevertheless, the data cards can be useful to BEH to make other tabulations, such as:

- a. Geographic distribution of funding
- b. Distribution of programs in which students are funded
- c. Level of training for students receiving funds.

4.83 Results. It was concluded that the BEH files could not be used as an information source for this study, and that an alternative procedure would have to be developed.

## Interview Consultants

4.84 Objective. The objective of this effort was to identify parameters to motivate special education personnel.

4.85 Procedure. Although the initial study plan called for small-scale interviewing with special education personnel to determine the study information requirements, an alternate procedure was used. A carefully selected panel of experts, previously introduced in the University Impact part of this section, having extensive knowledge of special education personnel, were interviewed to obtain their opinions and impressions of the factors which influence the motivation of personnel in the field of educating the handicapped.

4.86 This alternative was chosen because it allowed the ORI staff to vicariously synthesize information gleaned by these experts through years of association with special education. In addition, the consultants discussed the motivational considerations with their special education students in the classrooms of their respective universities and supplemented the initial interviews with this student input.

4.87 Results. The product of these discussions was the preliminary list of motivational parameters developed for this study.

## Determine Information Requirements

4.88 Objective. The purpose of this task was to determine specific information to be collected by the Personnel Motivation Survey.

4.89 Procedure. The preliminary list of parameters consisted of a long list of probable factors influencing decisions to enter, remain in, and leave special education. This list was organized by classifying each factor in one of seven motivation areas; some factors were eliminated as being too similar to others. This refined list was reviewed with BEH and several questions of interest to the Bureau were added. Since most of these additions were of a descriptive rather than a motivative nature, two sets of information requirements were delineated:

- a. Demographic/biographic variables
  - 1. Age
  - 2. Sex
  - 3. Special education interests.
- b. Motivation variables
  - 1. Financial rewards
  - 2. Professional status.

4.90 Results. The information requirements thus organized provided a basis on which a study approach could be determined for the collection and analysis of survey data.

#### Select Motivation Study Approach

4.91 Objective. The purpose of this task is to determine the best method of identifying and measuring motivation factors affecting manpower in special education.

4.92 Procedure. Many relevant motivation areas were pointed out by the consultant panel of experts; however, the approach selected must be able to measure not only factors already identified, but also the factors which may have been missed.

4.93 Since this type of data is not contained in existing records, a survey technique had to be developed to collect it. Personal interview techniques are often used in motivation research but are too costly and time consuming for this study effort. Therefore, the questionnaire survey method was decided upon; the questionnaire would have to be capable of:

- a. Obtaining accurate answers to personal questions
- b. Measuring subtle feelings of which a respondent is not fully aware
- c. Operationally defining the magnitude and vector of motivational forces acting on the individual completing the questionnaire
- d. Being formatted so that motivation parameters can be averaged for groups of individuals.

4.94 Several techniques were evaluated such as Porter's<sup>6/</sup> need fulfillment deficiency analysis and various other scaling techniques. Nevertheless, all the techniques investigated concentrated on evaluating the absolute need satisfying value of each motive factor relative to the need magnitude. This survey, however, required a technique which would be capable of evaluating the value of each need satisfier not in its absolute sense, but relative to all the competing need satisfying events (or things) offered by the individual's environment.

4.95 A special motivation scaling technique had to be developed to meet the survey demands.<sup>7/</sup> This technique, which will be discussed later in this section, uses the weighted product of two separate scales to identify the

<sup>7/</sup> This was developed in conjunction with Mr. T. Tsuruoka, Mathematical Demographer, N.Y.C.

amount that each factor attracts or repels a person to/from special education in light of all alternative attractions of which the person is aware.

4.96 The unique approach of this study requires the respondent to select points in the item scale as they would have applied at different decision points in his life. For example, a student dropout would be requested to complete items by responding the way he would have at the time he entered training and for when he decided to leave training.

4.97 The purpose of each questionnaire form is to collect information from the target sample pertaining to the times they made important career decisions to enter, remain in, or leave their field.

4.98 The selection of appropriate samples of people to survey was determined by the information requirements. For example, to study the decision to enter special education training, all people who entered needed to be sampled. This included present students in special education, student dropouts, people practicing in special education, and qualified people who are currently inactive in the field (assuming that to practice is to have trained). These four groups, students, dropouts, practitioners and attritees form the major subsamples in this study. Two more groups were also studied for comparison purposes: regular education students and practitioners.

4.99 Results. From the review of information requirements, the methods for obtaining necessary information and for identifying the study target samples were selected.

#### Determine Sample Availability

4.100 Objective. The objective of this task was to determine a manner in which the relevant mailing lists could be prepared.

4.101 Procedure. Initially, it was assumed that the sample groups could be identified through mailing lists of professional organizations, such as The American Speech and Hearing Association, the Conference on Exceptional Children, and the National Education Association. However, because the latter two organizations were unable to allow use of their mailing lists of professional and student members, alternate procedures had to be developed. The two major steps in the sampling procedure were:

- a. Assembly of the university mailing lists
- b. Taking of random samples from these lists.

4.102 The compilation of all the sampling lists was accomplished in three procedures that are described with the following outline. The mailing groups, compilation of sampling lists, and the final samplings are described for each sampling procedure as follows:

a. Sampling Procedure I

1. Mailing groups

- (a) Special education practitioners in primary and secondary public schools (SEP)
- (b) Special education administrators for public schools (SEP-Admin)
- (c) Regular education practitioners in primary and secondary public schools (REP)
- (d) Special education practitioners attritees from primary and secondary public schools (SEA).

2. Compilation of the sampling list

- (a) From 44 million pupils in the United States, a school district was selected for every 111,000th pupil. This resulted in 400 selections and 366 different school districts.
- (b) From these school districts, down to 200 school districts using a table of random numbers were sampled.
- (c) Each of the 200 districts was telephoned to establish the name of the special education administrator. The administrator was asked for the names and addresses of the SEPs and SEAs in his district.
- (d) Every 4th district was asked for all the REP's at the  $k$ th school, where  $k$  was random in the interval from 1 to  $n$  ( $n$  = number of schools in the district).

3. The following listing shows the results from the telephone calls in terms of the number of school districts supplying names and the amount received.

<u>Mailing Group Category</u>	<u>School Districts</u>	<u>Total Names</u>
SEP- Admin	200	200
SEP	113	5,752
SEA	14	34
REP	26	595

4. Sampling from the compiled lists

- (a) All 200 of the school district administrators contacted were used for the SEP - Admin mailing group.
- (b) For the SEP mailing group, 519 names for the initial mailing were randomly selected. This was accomplished by selecting a random four or five names per school district. (A target of five was established unless fewer were available.) The exact procedure was to make the random selection from each school district individually by numbering the names (1,n) and using a random number table (n = number of names per district).
- (c) All 34 of the SEA names received from the initial telephone calls were used. This amount fell far short of the requirements for the study. To make up this shortage, under a very rigid time constraint, the original method was altered. Special education school directories were chosen at random from the 50 states. Within the selected directories, a school district was picked on the basis that it had a large amount of special education teachers and would conceivably have a high attrition rate. After the selection was made, the school district was contacted by phone and the names from the directory were read to the school district administrator. The administrator would in turn identify any individual that had left the district. This process was repeated until 230 SEA's had been identified.

- (d) For the REP mailing group, a random selection was made of 235 names or approximately 9 per school district. The exact procedure was to make the random selection from each school district individually by numbering the names (1,n) and using a random number table (n = number of names per district).

b. Sampling Procedure 2

1. Mailing groups

- (a) Special education students at nonfunded universities (SES-NF)
- (b) Special education students at funded universities who are recipients of PL 85-926 funds (SES-R)
- (c) Special education students at funded universities who do not receive PL 85-926 funds (SES-NR)
- (d) Special education student dropouts at funded universities (SED-F)
- (e) Special education student dropouts at nonfunded universities (SED-NF)
- (f) Regular education students (RES).

2. Compilation of the sampling list

- (a) From 508 university departments (special education and speech and hearing), 200 departments were selected at random by numbering the departments (1,n) and using a random number table.
- (b) Each department was sent a letter requesting the names of their special education students for the current year and dropouts from the previous year. This was followed by a telegram to the nonrespondents asking for their response.
- (c) They were requested to send a list of all the education majors, or if that list was not available, to select 10 names at random from their enrollment and specify the total amount of names from which the 10 names were drawn.

3. The following listing shows the results from the request to the university departments:

<u>University Depts.</u>	<u>No. of Depts. Re- ceiving Request</u>	<u>No. of Depts. Responding</u>	<u>Total SES RES Names Rec'd</u>	<u>Total SED Names Rec'd</u>
Special Ed. Funded Univ.	134	101	14,425	740
Spec. Ed. Non- funded Univ.	66	45	1,610	53
Regular Ed.	189	137	(1,297)*	N/A

\* The total population, provided by the university departments, from which these names were selected, was 165,006. Of the 1,297 names sent, 437 were without the information concerning the population.

4. Sampling from the compiled lists

- (a) For the SES-NF, 200 names were drawn at random by numbering the names (1,1610) and using a random number table.
- (b) The SES-R and SES-NR mailing group's names were not distinguishable upon receipt from the funded university departments. To ascertain if recipients and nonrecipients could be identified, 200 names were drawn at random from the population of 14,425 using a random start procedure and a skip interval of 72. Of these names, only 2 were identified as recipients from the recipient directory compiled from BEH records. An alternate procedure was used to identify the recipients. The university department of every 4th individual's name drawn above was contacted and asked to identify their PL 85-926 recipients. The following list shows the results of those telephone calls.

University departments contacted	37
Total nonrecipients	7,697
Total recipients	620

Four recipients and four nonrecipients were picked per university department selection with the appropriate weight given to the department if it was selected more than once, (i.e., if selected twice, eight recipients and eight nonrecipients would be selected from that particular university.) The actual selection of the names was done by numbering the names (1,n) and using a random number table (n = number of names per university department per each separate list, recipient and nonrecipient.)

The final results of this sampling was 235 SES-R and 235 SES-NR.

- (c) For the SED-F and SED-NF, all the names received were used. (See Table 2.)
- (d) The final sampling for the RES mailing group resulted in 200 names being selected. This was done by using a random start procedure and a skip interval of six names.

c. Sampling Procedure 3

- 1. Mailing group - Special education practitioners at the university level (SEP-UNIV).
- 2. Compilation of the sampling list - From 308 university departments offering special education (the complement of the 200 used in the special education student sampling), one department at a time was selected using random numbers (1,308). A telephone call was made to the selected department to ascertain the number of full or part-time faculty engaged in teaching special education to college students who would be entering the field. This procedure was continued until 209 names were accumulated.
- 3. Sampling from the compiled list - All 209 names were used in this mailing group.

4.103 Results. The foregoing procedures, developed in determining the availability of the survey sample, produced the mailing lists of questionnaire recipients that would be used in conducting the survey.

## Design Motivation Questionnaire

4.104 Objective. The objective of this effort was to design and pretest questionnaires in accordance with the information requirements established by the study approach.

4.105 Procedure. Abstractions such as motivation and attitude need to be operationally defined within the framework of accepted theory and the particular problem being studied. The decision sequences through which people pass when entering and leaving the field (See Table 3 ) were systematically analyzed.

4.106 With the assistance of the consultant team these decisions and the factors which appear to influence them were reviewed to determine the desired content of the motivation study questionnaires.

4.107 The questionnaire was used to identify the basis for the choices made at the various decision points. This was done by determining the motivation expected to influence choice behavior in specific areas and by providing for the identification of other areas which might be added by respondents (i.e., in addition to specific motivational questions derived from the study framework, open-ended questions will permit respondents to give other motivational factors).

4.108 Scope of motivational content. Based on discussions among consultants, BEH coordinators, and ORI staff, and a review of relevant research, seven areas of motivation were isolated for study. In addition, several environmental constraints which may influence job activity and choice were identified. The seven motivation areas contain needs similar to those identified by Maslow,<sup>8/</sup> but were derived from ORI's initial decision-making analysis. These areas in which possible motivation factors were identified are: economics, employment, status, success, training, self-expression, and family. These areas are discussed individually in the following paragraphs.

- a. Economics. This area is concerned with the way a person perceives what the world can offer him in terms of his own economic needs. He naturally evaluates what his needs are and then seeks to satisfy these needs by finding a source of income. This eventually leads to his employment in some gainful activity. A man's economic needs are based on an infinite complex of subneeds, such as the need for food, for shelter, for security, for all of the things money can buy. However, it must be realized that jobs are seldom taken only on the basis of the money they supply.

TABLE 3  
TYPES OF DECISIONS STUDIED IN SEVEN RELEVANT  
CAREER CHOICE SEQUENCES

		PERSONNEL MAKING DECISION								
		Students of Special Ed.	Student Drop Outs	Student (Related Fields)	Special Ed. Practitioners		Special Ed. Attritce			Related Field Practitioner
SEQUENCE TYPE:		A	B	C	D	E	F	G	H	I
DECISION TO BE STUDIED										
1. Enter Special Education Training		y	y		y	n	y	n		y
2. Enter Related Field Training				y					y	
3. Remain in Special Ed. Training					y					y
4. Leave Special Education Training			y							
5. Enter Special Education Practice					y	y	y	y		
6. Do not enter Special Ed. Practice										y
7. Enter Related Field Practice									y	
8. Remain in Special Ed. Practice					y	y				
9. Leave Special Education Practice							y	y		
y = Affirmative Decision										
n = Negative Decision										
Blank = N/A										

- b. Employment. When a person is considering a job, he should, and undoubtedly does, consider the working conditions, the working hours; and employment benefits. When trying to understand a man's motivation concerning these employment variables, it is necessary to understand that these variables have by no means a universal appeal. This same holds true for most, if not all, of the other motivation areas.
- c. Status. There are three separate kinds of status studied in this survey. The first, self acceptance, is based on the other two. Each person seems to have an image of the kind of person he should be or would like to be. This image is often based on what he feels would be most acceptable to his friends and to people in general. When considering a job, a person tends to evaluate the amount of self-esteem the job would allow him to feel about himself. The second and third types of status are more classical in nature, i.e., peer status and general status. Thus, when a person considers a job he thinks of the opinions his friends will have about him in that job. However, friends are not the only influence, as people are often concerned about how the world in general acknowledges their occupation. Once a man has determined that he can obtain self-acceptance, peer acceptance, and public acceptance, he will probably consider how well he can live up to the requirements of the job.
- d. Success. When evaluating a job, people generally consider their ability to succeed in the position. Each person's requirements to obtain feelings of success are different. To many people, security means success, and advancement is not necessary; while other people feel successful in a job that has very little security, but offers rapid advancement. Many people feel successful if they can avoid working hard, while others feel fulfilled only with tremendous work output. In general, however, the amount of success a person can attain at a job is contributed to by the amount and quality of training that he was able to obtain.
- e. Training. When choosing a career field, people are generally concerned with the availability and quality of training in that field. Some feel that the ease with which they can get through training is of the utmost importance while others feel that the quality of the training itself is of prime importance. Once a person has received

training, he usually evaluates the prospective job in terms of his own personal values.

- f. Self-Expression. Ability to express oneself in his job seems to be an important variable especially in attracting people to the special education field. The amount of comfort a person feels in his job very often varies with the amount of self-expression he can exercise and often bears directly on his happiness in private life.
- g. Family. When a person begins a family, a great many constraints are put on his time. He incurs personal and emotional responsibilities which can interfere with his employment responsibilities. Therefore, when choosing a job, people often review its requirements with respect to their own domestic constraints, such as time to care for children, to be with their spouse, and to enjoy recreational activities.
- h. Miscellaneous Environmental Constraints. Often there are several jobs which would satisfy a person, but he is pushed towards one by environmental constraints beyond his control, i.e., personal experiences, military obligations, geographic location, availability of financial support in training, information available, and health in general, these are the random occurrences which channel our lives into one stream or another.

These miscellaneous environmental constraints are to be considered, in conventional questions, while the seven motivation areas contain need factors which must be carefully analyzed by specially designed scale items.

Each area will be studied in depth to determine (a) the importance of the need relative to other needs, and (b) how well the person feels that the field of special education, or related fields, can satisfy the need. When analyzed, the data from these questions will indicate how much, and in what way, the person is motivated by the field of special education, by his own needs, and by environmental factors which were beyond his control.

In addition to the motivational area questions, the data collection instrument will also tap (a) certain biographic-demographic information, and (b) the history of career choices for each individual.

4.109 Selection of special measurement techniques. Two unique measurement techniques developed for this study were the scaling technique and the career tracing technique.

- a. Scaling Technique. When dealing with attitudes, it is necessary to clarify exactly what is being measured. This clarification takes the form of operational definition within the realm of some theoretical structure. Once a construct is operationally defined, rules must be established for translating it into concrete data. These data are observable analogs by which the researcher infers how much, of what aspect, of the property being measured belongs to each case.

Measurement requires, therefore, the selecting of appropriate subjective "feelings," and measures that can translate these concepts into operations. The more accurately these operations classify the persons in terms of the construct as defined into the conceptual model or theory, the more valid is the measure. For this reason, it is necessary to have very detailed instructions and specific examples of the operations required.

Kurt Lewin <sup>9/</sup>, the father of modern field theory in social science, developed a useful conceptual model for motivation which can be used to great advantage in the social phenomenon or in terms of individual behavior.

Man's behavior is based on his drive to satisfy needs. When a man has a need which is unfulfilled, this causes tension. Since the man finds this tension uncomfortable, he surveys his environment looking for some means to reduce it. When the man perceives something in the environment which he believes will satisfy part of all of his needs, he moves towards that object. This movement is referred to as locomotion. While locomoting toward the object, he evaluates its ability to reduce his need in terms of alternative need reduction operations available to him.

It is this kind of locomotion that brings people into the field of special education. They feel certain needs, and see special education as a means of satisfying those needs. Individuals are not always accurate in their assessment of the need reducing object in their environment. Likewise, people often misjudge the ability of an object to satisfy their needs. When this happens, tension causes the individual to search his environment for alternative operations

---

<sup>9/</sup> Kurt Lewin, Field Theory in Social Science, Harper Row, New York, 1951.

by which he can find satisfaction. When this happens, there is a very high probability of a person leaving the field of special education. The second source of attrition is a change, over time, in a person's need state. When this happens in special education, a person is no longer satisfied with the things that attracted him to the field originally, and he re-evaluates his situation. If he finds more satisfying alternatives in the environment, he is likely to locomote away from special education.

1. Scales. Because motivation constructs such as needs, importance and satisfaction are all continuous variables, they are difficult to quantify in a questionnaire. However, psychological scaling techniques, such as those used by Thurstone <sup>10/</sup> can be used to operationally define these constructs.

The scales used in this survey were especially designed to construct a motivation profile for the decisions to enter, remain in and leave special education. The profile consists of a number of factors previously mentioned which are rated on two scales, one for attraction and the other for importance. The attraction scale quantifies the perceived amount of satisfaction (on a specific variable) available in special education relative to all alternatives. The score on this scale not only gives magnitude but direction to a person's probable locomotion if this were the only variable to be considered. However, the individual considers many other variables (aspects) by degree of importance. This is the reason for the second scale.

The importance scale is used to weight each aspect of special education relative to all other aspects being considered. For example, although a person may find the working conditions in special education highly attractive, he may score them as having a very low importance to him because of the unattractive financial rewards. In this case, his locomotion factor would have a negative vector with respect to special education.

---

<sup>10/</sup> L.L. Thurston and Ernest J. Chave, Measurement of Attitudes, Chicago: University of Chicago Press, 1948.

The responses on the two scales are combined into a single index with a range of between -10 and +10. A minus value indicates a locomotion vector away from special education and the plus values indicate locomotion toward special education.

The evaluation of the answers for any one question is dependent upon the combination of the attraction and importance assigned to the answers by the respondent. For instance, if one set of responses to the category/aspect question

(Category)	Indicate how you felt about teacher training when you entered it
(Aspect)	Length of training required

was D (discouraged) for the attraction scale and 4 for the importance scale, the weighted locomotion factor would be -7 (see Figure 3, Matrix of Locomotion Factor Weights). This would indicate that, for that one question the respondent was quite negative about special education. For another set of responses, such as SA (strongly attracted) and 1 for importance, the locomotion weighting factor would be 2 indicating, for that one question, a mild interest in special education.

The composite scores of each subgroup, will point out the areas most responsible for attracting and retaining people in special education, as well as those things which are most responsible for dissatisfaction and causing people to leave. Manipulation of these variables should have a direct effect upon attraction of manpower to the field, as well as keeping it over a period of years.

2. Probable Effect of Denial on Scale Responses. The attraction scale (object-oriented) is descriptive of the field aspect. This is the easiest scale for most people because at face value it says more about the field than about the respondent.

This second scale (importance) is far more difficult for most people. It asks for a very personal self evaluation: How important is this aspect to me?

Attraction Scale		Weighted Values				
Strongly Attracted	SA	2	4	6	8	10
Attracted	A	1	3	5	7	9
Neutral	0	0	0	0	0	0
Discouraged	D	-1	-3	-5	-7	- 9
Strongly Discouraged	SD	-2	-4	-6	-8	-10
		1	2	3	4	5
		Importance Scale				

FIGURE 3. MATRIX OF LOCOMOTION FACTOR WEIGHTS

This leads to varying amounts of denial in most people. That is, they tend to avoid strong commitments, such as revealing how important something is, if it is very important. The amount of denial usually varies directly with the magnitude of the commitment. This kind of denial is called negative denial. Nevertheless, people who control their own tendencies toward denial will be the only ones who score a 5 or maximum importance. We can therefore accept a score of 5 as fairly accurate. A score of 4 will be scored by many of the more objective people above as an importance midway between 3 and 5. However, many people will feel that although this aspect is of maximum importance to them, they prefer to "soften" their response and give a 4 instead of 5 (moderation in all things is valued by our society). By the same token, a score of 3 will be given by a percentage of people who really feel "5", by a percentage of people who feel "4" and by those who feel "3". It is estimated that this continues in approximately the pattern "B" below:

The reason for the rapid dropoff toward the low importance is that there is little need to deny these lesser commitments, except when one feels obligated to be committed. Pattern "A" is the mirror image of "B". It is likely to be followed by people who feel that commitment is necessary. They, in effect, tend to deny the lack of importance of an item for them.

Since we do not know what the actual magnitude of the problem may be, we have weighted the importance scale scores so that the rank order of composite attraction; importance score combinations will more accurately reflect actual behavior. In addition, we have eliminated as much ego involvement as possible, by not using individual names.<sup>11/</sup>

<sup>11/</sup> It should be noted, however, that many people forget that their names are not being used.

- b. A Career Tracer Technique. Members of the BEH expressed a desire for information concerning career choices over the entire career of each individual. Although beyond the scope of this study, a career sequence tracer chart was designed so as to provide a data base for future BEH analysis. This chart is filled out by each respondent according to the decisions he has made in the past.

Several types of charts were tested and most proved either too difficult to complete, or to contain too little information. The final form (Figure 4) was successfully pretested and used in the survey. It can provide data for many kinds of analysis. The following are a few examples:

1. Time taken to obtain degree
2. Time spent in part/full-time study
3. Reasons for different training sequence
4. Type of employment experience
5. Changes in type of training.

Therefore, career sequence data was coded and put into machine readable form for future analysis. Detailed analysis of this form is not presented in this report as it is beyond the scope of the present study.

4.110 Questionnaire formats. Six separate questionnaire layouts were prepared: four for special education personnel and two for regular education personnel (copies of all Motivation Study materials are contained in Appendix B, Part II).

4.111 The first section of each questionnaire identifies some demographic variables and collects certain specific opinions needed to assess the impact of PL 85-926 on the individual. The second section contains a career sequence tracking item. This can, with extensive analysis (beyond the scope of the present study) give detailed information about the manpower flow into and out of special education. However, this item is presently being used to identify several individual respondent parameters in the survey.

4.112 The last section of the questionnaire contains the scale items. These are arranged in two or three sections. Each section asks the respondent to answer the way that he felt at the time of a specified decision (i.e., when he decided to enter education for the handicapped).

- a. Section One—Demographic/Biographic Data— This section is similar on all six questionnaire forms, with small differences due to appropriate wording and deletion of inappropriate items. There are two types of questions:

### Career Sequence Information

The chart below has been designed to trace the sequence of training and practice you have followed. Each line (row) is designed to record data about a given time period during which you undertook a given level of training, work experience or both. Line one starts with a description of your undergraduate training; if you also had a job while going to school you would describe it on the same line. Each time you changed jobs or level of training, start a new line. Circle the symbols to describe your training and/or experience. (Circle a degree only for the time period during which it was awarded.) The first time period has been used to illustrate an example. Start on line 2 and indicate in column 2 the first set of consecutive years you undertook undergraduate training. Circle the appropriate symbols to describe your training. Indicate any work experience you gained during that time period on the same line. Complete the succeeding lines in order, using a new line for each change in position, year of education, summer session or special study institute. On each line indicate the academic years or summer that applies and then circle the appropriate symbols. Indicate all periods of work, school, or unemployment. Do not indicate unemployment for vacations. If unemployed, circle only UE under "Experience."

Time Period		Description of Training						Description of Experience			
Time period years or summer	Academic years or summer	Training level in progress UG - undergraduate S - fifth year MA = masters PMA = post masters SI = special study institute	Area S = special education R = regular education O = other	F = full time P = part time	Degree received (Circle Ed.S for advanced certificate) Skip this column for years in which you did not receive a degree	Reason for training EF = enter field OC = obtain certification AA = advance in your area CA = change area SP = special project training O = other	Financial aid PL = PL 85-926 as amended, includes PL 83-164, PL 87-276 and PL 89-105 OF = other Federal ST = state grants, etc. OK = do not know source of aid NO = none or other	Area UE = unemployed RE = regular education EH = Education for the Handicapped OP = other professional O = other (If UE, go on to the next line)	Type T = teacher A = administrator I = instructor P = part time O = other	F = full time P = part time	
1	2	3	4	5	6	7	8	9	10	11	
1	60-61	UG 5 MA PMA SI	S R O	P	BA MA Ed.S Ooc	EF OC AA CA SP O	PL OF ST OK NO	UE RE EH OP O	T A TT O	F P

FIGURE 4. CAREER SEQUENCE INFORMATION

1. Demographic—such as age, sex, and marital status
2. Biographic—such as "when did you first decide to enter special education?" "How far did you travel to get training?" and "What were your main sources of information?"

- b. Questionnaire formats— Six separate questionnaire layouts were prepared: four for special education personnel and two for regular education personnel (copies of all motivation study materials are contained in Appendix B, Part II).

The first section of each questionnaire identifies some demographic variables and collects certain specific opinions needed to assess the impact of PL 85-926 on the individual. The second contains a career sequence tracking item. This can, with extensive analysis (beyond the scope of the present study) give detailed information about the manpower flow into and out of special education. However, this item is presently being used to identify several individual respondent parameters in the survey.

The last section of the questionnaire contains the scale items. These are arranged in two or three sections. Each section asks the respondent to answer the way that he felt at the time of a specified decision (i.e., when he decided to enter education for the handicapped.

- c. Section Two—Career Sequence Information—Additional biographic data was collected by the special "Career Sequence Tracer" chart described earlier.
- d. Section Three—Motivation— This section was different for each questionnaire form. Each respondent was asked to think back to the time he made a certain career decision, or to think of the present as in Table 4.

4.113 For each of the above decisions, or present feelings, the subject is requested to fill out a set of scale items. All sets of scale items are the same, only the decision point is different, thus extensive comparisons can be made.

4.114 Pretest. A prototype of each questionnaire was pretested on five people. The names and addresses were supplied by professional organizations and two midwestern universities.

4.115 The respondents were requested to fill out a comment sheet at the end of the questionnaire. Specific comments were requested on the lucidity and quality of the items.

TABLE 4  
DECISIONS CONSIDERED IN EACH QUESTIONNAIRE

Form	Decision
SES (Special Education Students)	(1) To enter special education training; (2) Present feelings.
SED (Special Education Dropouts)	(1) To enter special education training; (2) To leave special education training.
SEP (Special Education Practitioners)	(1) To enter special education training; (2) To enter special education practice; (3) Present feelings.
SEA (Special Education Attrittees)	(1) To enter special education training; (2) To enter special education practice; (3) To leave special education practice.
RES (Regular Education Students)	(1) To enter teaching training; (2) Present feelings.
REP (Regular Education Practitioners)	(1) To enter teacher training; (2) To enter practice; (3) Present feelings.

4.116 The comments and item responses were analyzed. Items which were poorly worded or constructed were modified and general format and print quality were improved before final mailing.

4.117 Results. The application of field theory to questionnaire design combined with modifications of classical measurement techniques resulted in the preparation of a questionnaire capable of measuring the parameters put forth in the information requirements.

4.118 Pretesting resulted in the improved format needed for effective data collecting.

### Conduct Survey

4.119 Mail Distribution. To avoid confusion and assure that each questionnaire form was sent to right target groups quickly, special procedures were used:

- a. Questionnaire forms were mailed processed sequentially, that is, SES forms were mailed before SED were started, etc.
- b. Assembly line stuffing and checking procedures were set up using time/motion analysis for efficiency
- c. All questionnaires were batch mailed by state to speed delivery
- d. Preprinted return mail envelopes were included in each package
- e. Each questionnaire was stamped with its unique ID code number and logged out by number in a master logging control file.

4.120 Follow-up Procedures. In accordance with the sampling procedures described in Appendix C, follow-up letters were sent to a sample of all non-respondents 10 days after the initial mailing.<sup>12/</sup> The follow-up letter expressed the importance of the survey, a realization of other pressing concerns on the individual, and requested that collect telephone calls directly to the contractor's principal investigator be made in case the questionnaire was not received or was misplaced.

4.121 Ten days after the letter was sent, a telegram, similar to the letter (but commanding more attention), was sent to a sample of nonrespondents who had received the letter.

4.122 Follow-up efforts were logged out by data to each person in the follow-up sample.

---

<sup>12/</sup> Follow-up efforts were not used with the sample of university teacher trainers because this would have had to be done by the chairman of special education, already burdened by the impact study.

4.123 Logging in Questions. Every questionnaire sent was recorded in the master logging control file (log) by number. No names were used. As each questionnaire was received, the date was stamped in the log. The data received were then compared to the data follow-up letters and telegrams were sent. Questionnaires returned with no follow-up, that is, received before 4 days after the first follow-up was sent, were labeled "WAVE I". Questionnaires received 4 more days after the follow-up letter, but before 2 days after the telegram was sent were labeled "WAVE II". All questionnaires received 2 days after the telegram follow-ups were labeled "WAVE III." The data from the waves was then weighted according to the bias control procedure explained in Appendix C.

4.124 Objective. The objective of this task is to organize and present the data collected in such a manner as to suggest answers to the questions which inspired the survey.

4.125 Procedure. The volume of data collected by this survey requires automated data processing equipment. It was therefore necessary to convert the incoming data to a machine-readable form.

4.126 Coding of questionnaires. Although part of the data contained in each questionnaire was precoded, i.e., was ready to be keypunched as it came in, most of it had to be coded. The items requiring coding were of the unrestricted response type. The response on each of 100 questionnaires was examined. These responses were then combined into general groups of similar responses. The groups were further combined until all 100 responses were contained in less than 10 code areas. Each code was then assigned a number and an initial coding handbook was written for each questionnaire. Coders were trained in the use of these handbooks, and in establishing new codes when absolutely essential. As coding progressed, the number of response categories expanded where needed to describe new families of responses.

4.127 Codes were written directly on the questionnaire forms, which were then batched for keypunching and key verification.

- a. Editing. Individual computer programs are written to edit each of the questionnaire forms. These programs checked each character to make sure it was within its defined parameters. Cards containing incorrect data were rejected by the computer, were repunched, and re-entered into the data files. In addition, the different wave weights were added to data files by the edit routines. Survey data was stored in nine separate files on a magnetic disk in lieu of magnetic tape.

b. Tabulations. Additional programs were written to retrieve and tabulate the data stored in the files. Two basic types of tabulations presented are:

1. Simple tabulations for

- (a) Numeric distributions
- (b) Range distributions
- (c) Calculations such as mean per year

2. Cross tabulations for

- (a) Numeric and range distributions
- (b) Calculations
- (c) Scale comparisons.

Variables for these tabulations are defined in Appendix D.

## Results

4.128 Care must be used in making population projections from the tabulations for the following reasons:

- a. The SES sample is composed of random subsamples of students at funded and nonfunded universities. The funded university sample is further divided into recipients and nonrecipients. These groupings were necessary to make comparisons at their level. Nevertheless, when they are combined, the groupings cannot be considered a random sample of all students. It is expected that the composite SES tabulations are more representative of student recipients of PL 85-926 and of students at funded universities than a truly random sample would be.
- b. The SEP sample is composed of random subsamples of practitioners at universities, administrators, and classroom teachers. These groupings were necessary to make comparisons at their level. The SEP sample under-represents practitioners in work settings other than schools. For this reason, a distribution of the sample represented in each work setting is presented in tabulation. In addition, the SEP sample slightly under-represents the six largest cities in the United States because their teacher mailing lists were not made available to us.
- c. It cannot be assumed that the respondents are representative of nonrespondents. Although the sampling method used in this survey was designed to minimize bias due to nonresponse, some bias is unaccounted for. This is

a result of low Wave 3 response due to the short time between the telegram and termination of data collection.

4.129 The only measurement available on the nonrespondent sample is the sex ratio which is compared with that for respondents.

## V. RECOMMENDED FURTHER ACTIONS

5.1 The submission of this Phase IV report represents the completion of contractor efforts in measuring the impact of PL 85-926 on manpower in education for the handicapped and in identifying and measuring the motivations of special education personnel. However, the data base, from which this report is derived, contains vast quantities of information that can be brought out by cross tabulation. In addition, the career tracing information can be analyzed for career patterns of special education. This kind of information would be of use to BEH in its program planning efforts.] efforts.

### OBSERVATIONS

5.2 On several occasions during this study the staff had opportunities to talk with knowledgeable people in education for the handicapped. There were two major points of view encountered: those of university personnel and those of people in practice.

#### University Chairmen and Program Area Directors

5.3 Problem. The staff had occasion to interview more than 200 chairmen and area directors during the survey. These interviews, concerned with various aspects of the study, often elicited comments on two subjects:

- a. The poor condition of their own recordkeeping systems
- b. The effort involved in completing grant application forms for BEH.

5.4 Recordkeeping Systems. The impact questionnaire seems to have pointed out deficiencies in the filing systems in many schools including some of the largest .

5.5 Many chairmen confessed that they were not really sure what kinds of data would be most useful to compile about their programs. Most complained of a lack of manpower to organize and maintain an internal data system. Because of this, some universities required upwards of 200 man-hours to complete the impact questionnaire.

5.6 With few exceptions, the chairmen admitted that they would gladly accept reasonable data collection guidelines from the government. Many suggested that an annual survey of this type would force their university administrations into providing the manpower necessary for collecting the data.

5.7 Recommendation. Most chairmen indicated a less than intense interest in the finer points of establishing an information system, but considerable interest in using one if they had it. For this reason, it is recommended that information guidelines be established for use by chairmen trying to set up or update their information systems.

#### Grant Application Procedure

5.8 Problem. Only one nonfunded university chairman stated that he did not apply for funding because it involves too much paper work. Interviews with many nonfunded chairman, however, indicate that this feeling is more widespread than admitted to in the questionnaire.

5.9 Applying for grant funds under PL 85-926 is generally considered to require a significant effort in terms of man-hours and cost. In addition, the procedure is apparently regarded as inefficient by those faced with applying.

5.10 The ORI review of grant records at BEH also indicates that the applications are cumbersome and of limited use to research in their present form.

5.11 Recommendation. A review of the grant process and its specific information requirements is recommended, so that a more effective grant management information system could be designed.

#### Practitioners in Special Education

5.12 Problem. Interviews with special education teachers and administrators have indicated that there is an additional manpower supply problem. The fact that 70 percent of the manpower force in education for the handicapped is actually womanpower indicates a high resistance to job migration. Married women are often tied to one geographic location by their husbands' jobs; thus, they work or do not work, depending on the manpower needs in their town. Married women normally do not migrate to where the need is.

5.13 Many school district administrators complained of personnel shortages, while even more teachers complained of lack of jobs.

5.14 The problem, then, appears to be more than one of communication between need and supply; it is one of logistics: how to predict shortages and move the manpower to where it is needed.

5.15 Recommendation. Much of the data brought to light in this survey can be used in organizing a study approach to solving the problem. It is therefore recommended that a special education motivation-migration analysis be undertaken to provide data needed to assess the magnitude of the problem.

#### APPLICATIONS OF PRESENT DATA

5.16 The findings and conclusions presented in these two surveys can point the way for efforts to increase the manpower pool in education for the handicapped. When used with techniques described in the Phase III report, the findings can be applied to solve the special education problems on a state-by-state basis. To do this, BEH must first convert these findings into operational procedures, i.e., improving laws, recommending programs, etc.

5.17 One promising application of the motivation scaling techniques is the forecasting of student dropouts and practitioner attritees.

5.18 This application can work in two ways:

- a. It has been found that the general pattern of motivations for students who will remain in special education training differs from the pattern for those who are likely to drop out. Therefore, a refinement of the scaling technique could be standardized, with computed validity and reliability coefficients, and used to predict a probability curve of an individual's remaining in training and/or practice over a period of years. In other words, forecast the changes of his dropping out after one, two or three years.
- b. Another use for the scaling technique would be to administer it in a modified form, to classes of freshmen students in education, to forecast the percentage who are likely (with proper encouragement) to go into education for the handicapped.
- c. A third use for the scaling technique is to administer it annually to random samples of students and practitioners in education for the handicapped to forecast the dropout and attrition rates for practitioners and students by geographical area. This

would give advanced notice of areas likely to develop a surplus or deficit in manpower so that early countermeasures can be taken.

5.19 The manpower pool is enormous and, as such, has great inertia. It will take sincere effort over a considerable time to effect needed changes. For this reason, it is imperative that steps be taken to improve the management of a manpower supply in education for the handicapped.

APPENDIX A  
RESPONDENT/NONRESPONDENT STATISTICAL COMPARISONS

INTRODUCTION

A.1 The tables contained in this appendix show comparison data based upon five descriptive variables:

Table A.1 contains comparison statistics pertinent to the geographic location variable.

Table A.2 exhibits data concerning the type of governing control variable.

Table A.3 shows the percentages relevant to the year founded variable.

Table A.4 contains comparison information relevant to the total number of teachers employed variable.

Table A.5 displays the respondent/nonrespondent proportions as they relate to the total student enrollment variable.

TABLE A.1  
COMPARISON OF GEOGRAPHIC LOCATION  
OF RESPONDENT AND NONRESPONDENT  
UNIVERSITIES

## APPENDIX B

### SURVEY MATERIALS

#### INTRODUCTION

B.1 This appendix contains those materials which were used to obtain the survey data collected for this Phase IV study.

B.2 There are essentially two independent sets of forms. One set was used to collect University Impact Study data and another set was used to collect the information for the Personnel Motivation Study.

B.3 Part I of this appendix contains copies of the eight cover letters, the three questionnaires, and the follow-up letter and telegram that were used in the University Impact Study.

B.4 Part II contains a copy of the six cover letters, the six questionnaires, and the follow-up letter and telegram that were used in the Personnel Motivation Study.

## PART I. UNIVERSITY IMPACT SURVEY MATERIALS

### B.5 This part contains the following items:

- Table B.1 — University Impact Survey materials distribution
- BEH cover letter, Form CFNF-C
- ORI cover letter, Form A-f
- ORI cover letter, Form A-n
- ORI cover letter, Form B-f
- ORI cover letter, Form B-n
- ORI cover letter, Form C-f
- ORI cover letter, Form C-n
- ORI cover letter, Form PAD-C
- Questionnaire, Form CNF (2 pages)
- Questionnaire, Form CF (4 pages)
- Questionnaire, Form PAD (2 pages)
- ORI follow-up letter
- BEH follow-up telegram.

1/ S&H = Speech and Hearing-and/or Deaf Programs.

2/ Special Education refers to the department in which the majority of courses for education for the handicapped are located.

BEH COVER LETTER

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE  
OFFICE OF EDUCATION  
WASHINGTON, D.C. 20202

Dear Colleague:

As you know, the Bureau of Education for the Handicapped is concerned with programs to help develop the needed manpower in our field. In order for such programs to be most effective they must be based on a realistic picture of present training programs, personnel in training and the impact of existing programs to support training for education of the handicapped.

Pursuing this aim, the enclosed questionnaire has been developed by Operations Research, Inc., acting under contract to us. The data collected will be invaluable in helping us to most effectively assist in the development of trained personnel for our field. However, individual questionnaire responses will be treated confidentially and will in no way affect the relationship between the Federal government and an individual institution. The responses received will not be identified with particular respondents or institutions in any report.

I urge you to make every effort to insure that the enclosed questionnaire is completed and returned. The principal investigator for this study is Mr. Peter M. Plantec of Operations Research, Inc. All comments and questions should be directed to Mr. Plantec.

Sincerely,

Leonard J. Lucito, Director  
Division of Training Programs

## Operations Research, Inc.

A subsidiary of Leasco Systems & Research Corporation

1400 Spring Street, Silver Spring, Maryland 20910

Telephone: 588-6180, Area Code 301

Dear Chairman:

The enclosed questionnaire is actually several separate but similar questionnaires. There is one for each area of Education for the Handicapped (e.g. MR, LD, Deaf, etc.) for which we understand you have a training program. In addition, there are two extra questionnaires. The questionnaires should be handled in the following way:

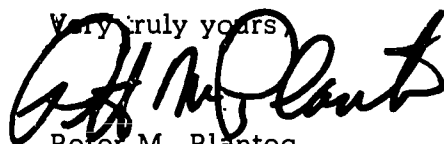

1. On each questionnaire, fill in the name of any program area in Education for the Handicapped, that exists in your university.
2. Indicate the first year that PL 85-926 funding was received by your university, or 1963, whichever was more recent, on each questionnaire under "Reference Year".
3. Distribute the questionnaires to the appropriate program area directors encouraging their candid opinions.
4. Please complete the special questionnaire marked "Chairman".
5. Collect and return all questionnaires to:

Peter M. Plantec  
Operations Research, Inc.  
1400 Spring Street  
Silver Spring, Maryland 20910

A complete return of questionnaires (one from each of your area directors), is absolutely essential to success of this study. Please mail all returns by three weeks from mailing date. If you have any questions, please call me collect at 301/588-6180.

All responses will be kept in confidential files to be tabulated for research purposes only. Your responses will in no way affect your relationship with the B.E.H.

Very truly yours,

Peter M. Plantec  
Principal Investigator

Dear Chairman:

The enclosed questionnaire is actually several separate but similar questionnaires. There are 4 blank questionnaires, one for each area of Education for the Handicapped (e.g. MR, LD, Deaf, etc.) for which you may have a training program. Please discard any extra copies. The questionnaires should be handled in the following way:

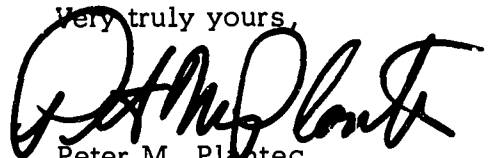

1. Fill in the name of any program in Education of the Handicapped area that exists in your university.
2. Indicate the first year your university had a program in Education for the Handicapped, or 1963, whichever was more recent, on each questionnaire under "Reference Year".
3. Distribute the questionnaires to the Directors of the Program areas you have indicated, encouraging their candid opinions.
4. Please complete the special questionnaire marked "Chairman".
5. Collect and return all questionnaires to:

TO ALL UNIVERSITIES FOR DISTRIBUTION TO PROGRAM AREA DIRECTORS

Dear Director:

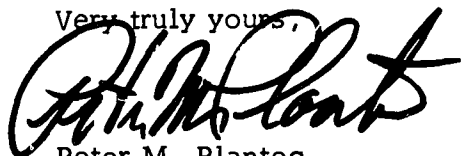

As you know, the Bureau of Education for the Handicapped is concerned with programs to help develop the needed manpower in our field. In order for such programs to be most effective, they must be based on a realistic picture of present training programs, personnel in training and the impact of existing programs to support training for education of the handicapped.

Pursuing this aim, the enclosed questionnaire has been developed by Operations Research, Inc. The data collected will be invaluable in helping us to most effectively assist in the development of trained personnel for our field. However, individual questionnaire responses will be treated confidentially and will in no way affect the relationship between the Federal government and an individual institution. The responses received will not be identified with particular respondents or institutions in any report.

The questions are of two types - objective and opinion. You are encouraged to be as accurate as possible in completing the objective section. Please be as candid as possible in answering the opinion type questions. For the purposes of this study, include within Education for the Handicapped, students who are preparing to be classroom teachers, administrators, clinic workers or any other function which includes the training of handicapped people. After you have completed your questionnaire, please seal it in the enclosed envelope and return it to your Chairman. If you have any questions, please see your chairman.

Your cooperation in this effort will be most appreciated.

Very truly yours,

Peter M. Plantec  
Principal Investigator

10. Please estimate the percentage of your budget for Education for the Handicapped, contributed by each of the following:

Total program budget	
Reference Academic Year	1968--1969 Academic Year
a. PL 85-926	5 -6 -7
b. University Administration	8 -9 -10
c. Other	11-12-13
	14-15-16
	17-18-19
	20-21-22

11. Please estimate the number of new faculty positions made possible by PL 85-926 funds:

23-24-25

12. In your opinion, are undergraduate traineeships effective in producing high quality students? Yes ☐ No ☐  
Explain: \_\_\_\_\_

26-27

13. Could you use the undergraduate traineeship funds more effectively in some other way to strengthen your program?  
Yes ☐ No ☐ If yes, how? \_\_\_\_\_

28-29

14. In your opinion, are graduate fellowships effective in providing high quality graduate students?  
Yes ☐ No ☐ Explain: \_\_\_\_\_

30-31

## EDUCATION FOR THE HANDICAPPED TRAINING PROGRAM SURVEY (CF)

15. Could you use graduate fellowship funds more effectively in some other way to strengthen your program?

Yes ☐ No ☐ If yes, how? \_\_\_\_\_

32-33

16. Please indicate what has happened to your program's location in university organization structure since the reference year.

- ☐ It has moved higher  
☐ It has remained stationary  
☐ It has moved down

Explain: \_\_\_\_\_

34-35-36

17. Indicate the academic year in which PL 85-926 funds were first received at your university \_\_\_\_\_ (If this was 1963 or after, this date is the same as the "reference year"). In Table A to the right, begin with academic year five years prior to the date just given, and indicate the number of graduates from all areas in your Education for the Handicapped program. Continue through to the first year prior to PL 85-926 funding.

If there was no program indicate by N.P., if there was a program but no graduates indicate by 0.

37-38-39-40

TABLE A

Years Prior to Funding	Number of Graduating EH Students	
5	41-42-43	44
4	45-46-47	48
3	49-50-51	52
2	53-54-55	56
1	57-58-59	60

3

In Table B to the right, provide the same information as above, but starting with the year in which PL 85-926 funds were first received. You will probably not need all the spaces provided. When you reach 1969-1970 write that in the left hand column and stop. Circle any years in which PL 85-926 funds were not received.

TABLE B

Funded Years	Number of Graduating EH Students
5 - 6 - 7 - 8	9 - 10 - 11
1.	
12-13-14-15	16-17-18
2.	
19-20-21-22	23-24-25
3.

8. Please estimate the percentage of your area budget which was contributed by each of the following:

	Reference Academic Year	1968-1969 Academic Year
PL 85-926 *	38-39-40	41-42-43
University Administration	44-45-46	47-48-49
Other	50-51-52	53-54-55

9. Please estimate how much space the university administration allotted to your area for these academic years. (Include shared space) Answer in estimated number of square feet

	Reference Academic Year	1968-1969 Academic Year
a. Classrooms	56-57-58 sq. ft.	59-60-61 sq. ft.
b. Offices	62-63-64 sq. ft.	65-66-67 sq. ft.
c. Other (Comment)	68-69-70 sq. ft.	71-72-73 sq. ft.

10. If no area of Education for the Handicapped at your university has ever received PL 85-926 funds, check here ☐ and STOP

7

11. Do you, as an Area Director, feel that PL 85-926 funds have stimulated the growth of your program?

Yes ☐ No ☐ If yes, in what ways?

8-9

12. In general, what do you think has been the impact of PL 85-926 on your area nationally? Please comment:

10-11

13. In general, what do you think has been the impact of PL 85-926 on your area at your university? Please comment:

12-13

14. Is your area presently receiving PL 85-926 funds? Yes ☐ No ☐

14

15. In what year was your area funded under PL 85-926?

15-16

16. In your opinion, have PL 85-926 funds stimulated the university to supply additional funds to your area?

Yes ☐ No ☐ If yes, in what ways?

17-18

\* PL 85-926 is defined as including the following: PL 88-164, PL 87-276, and PL 89-105

ORI FOLLOW-UP LETTER

**Operations Research, Inc.**

A subsidiary of Leasco Systems Corporation  
1400 Spring Street, Silver Spring, Maryland 20910  
Telephone: 558-6180, Area Code 301

25 May 1970

Dear Chairman:

A few weeks ago I sent you several questionnaires concerning a Manpower Survey for the Bureau of Education for the Handicapped. As of the above data I have received no reply.

I am aware that both the time of year and the difficult situations on many of the campuses to which this letter is being sent may have delayed your response. However, because of the extreme importance of the information being collected by these questionnaires, I must ask that they be mailed as soon as possible, and no later than June 10.

If you did not receive the survey materials, are in need of additional materials, or have any question about the completion of the questionnaires, please call me collect at Area Code 301/588-6180, ext. 281 between 8:30 a.m. and 5:00 p.m. EDT. If you have already returned your questionnaire, please disregard this letter and accept my thanks for your participation.

Very truly yours,

Peter M. Plantec  
Principal Investigator

## WORD CONTENT OF BEH FOLLOW-UP TELEGRAM

Subject: Bureau of Education for the Handicapped Manpower Questionnaires  
Sent by Mr. Plantec of ORI (O.E. Numbers 9026-1,2,3). No return  
received.

Dear Colleague:

Because of the difficulties in completing the above questionnaires at  
this time, I have extended the deadline to June 30. Please make every attempt  
to mail returns before then.

If you have questions, call Mr. Plantec at (301) 588-6180, Extension  
281 between 8:30 a.m. and 5:00 p.m. E.D.S.T.

If you have sent your return, accept this as my thanks.

Leonard J. Lucito  
Director  
Division of Training Programs  
USOE, BEH

## PART II. PERSONNEL MOTIVATION SURVEY MATERIALS

B.6 This part contains the cover letters and questionnaires that were used in the Personnel Motivation Survey. It includes six different form letters and 25 different questionnaire pages that were assembled according to the type of respondent, as shown in Table B.2. For the convenience of the reader, complete questionnaire packets, including cover letter, are contained in this section. The table also indicates where there is similarity between questionnaires.

B.7 Copies of the ORI follow-up letter and the wording of the BEH follow-up telegram are also included.

BEH COVER LETTER TO RES  
DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE  
OFFICE OF EDUCATION  
WASHINGTON, D.C. 20202

You have been selected, along with a number of other education majors, to participate in a national survey sponsored by the U. S. Office of Education, Bureau of Education for the Handicapped. You, as an education major, have made a decision to enter teacher training. The Office of Education is interested in that decision and this survey is designed to collect information about it. The information you can give will be used to help the efforts to increase the supply of qualified teachers. Your assistance in this matter of professional importance will be invaluable.

All responses will be held in confidential files and tabulated for research purposes only. The responses of specific individuals will not be identified. In addition, the names of those selected and responding will not be released.

Please attempt to complete this questionnaire, and return it in the enclosed self-addressed envelope within 5 days.

Sincerely yours,

Leonard J. Lucito, Director  
Division of Training Programs

# STUDENT FORM (RES)

1. Sex (circle) M F 2. Present age: \_\_\_\_\_ 8 - 9 - 10 1

3. When did you decide to become a teacher? Year \_\_\_\_\_ Age \_\_\_\_\_ 11-12-13-14

4. What was the most important thing that caused you to first seriously consider education as your field?

5. When did you first enter teacher training? Year \_\_\_\_\_ Age \_\_\_\_\_ 15-16 17-18-19-20

6. Did you ever train for a career in Education for the Handicapped? Yes ☐ No ☐ 21

7. When you entered teacher training, what was your marital status?  
Single ☐ Married ☐ Divorced ☐ Widowed ☐ 22

8. Did the amount and kind of financial support available for teacher training help motivate you to enter that field?  
Not at all ☐ Moderately ☐ Very Much ☐ 23

9. When you decided to become a teacher did you think that it might improve your draft status?  
Yes ☐ No ☐ Not applicable ☐ 24

10. What was your first source of information about teaching?

11. How would you evaluate the quality of your training to be a teacher thus far?  
Excellent ☐ Fair ☐ Good ☐ Poor ☐ 25-26 27

12. What contact have you had with handicapped children or adults? ++++++  
If none, have you avoided contact? Yes ☐ No ☐

Situation (e.g. Home, camp)	Your relationship to handicapped person	You, age

13. Are you or is a member of your family handicapped? Yes ☐ No ☐ 28-29-30-31 32-33-34-35 36-37-38-39 40

14. Have you ever considered Education for the Handicapped as a career? Yes ☐ No ☐ If yes, why are you not training in Education for the Handicapped?

15. What could be done to make a career in Education for the Handicapped attractive to you?

# Career Sequence Information

The chart below has been designed to trace the sequence of training and practice you have followed. Each line (row) is designed to record data about a given time period during which you undertook a given level of training, work experience or both. Line one starts with a description of your undergraduate training; if you also had a job while going to school you would describe it on the same line. Each time you changed jobs or level of training, start a new line. Circle the symbols to describe your training and/or experience. (Circle a degree only for the time period during which it was awarded.) The first time period has been used to illustrate an example.

Start on line 2 and indicate in column 2 the first set of consecutive years you undertook undergraduate training. Circle the appropriate symbols to describe your training. Indicate any work experience you gained during that time period on the same line. Complete the succeeding lines in order, using a new line for each change in position, year of education, summer session or special study institute. On each line indicate the academic years or summer that applies and then circle the appropriate symbols. Indicate all periods of work, school, or unemployment. Do not indicate unemployment for vacations. If unemployed, circle only UE under "Experience."

Time Period			Description of Training						Description of Experience			
Time period	Academic years or summer	Training level in progress UG = undergraduate 5 = fifth year MA = masters PMA = post masters SI = special study institute	Area S = special education R = regular education O = other	F = full time P = part time	Degree received (Circle Ed.S for advanced certificate)  Skip this column for years in which you did not receive a degree	Reason for training EF = enter field OC = obtain certification AA = advance in your area CA = change area SP = special project training O = other	Financial aid PL = PL 85-926 as amended, includes PL 88-164, PL 87-276 and PL 89-105 OF = other Federal ST = state grants, etc. DK = do not know source of aid NO = none or other	Area UE = unemployed RE = regular education EH = Education for the Handicapped OP = other professional O = other (if UE, go on to the next line)	Type T = teacher A = administrator TT = teacher trainer O = other	F = full time P = part time

The following pages contain a number of two-part questions about various aspects of Education. The first part of each question asks about the extent to which you were attracted to the field by that particular aspect. You will have five choices.

Answers to the left of "neutral," should indicate that you were so dissatisfied with this particular aspect that it tended to discourage you from entering the field. Answers to the right of "neutral" should indicate that although that aspect of Education for the Handicapped may not entirely meet your needs or desires, it still made the field relatively attractive to you.

The neutral or zero point indicates that the aspect in question neither attracted nor discouraged you from the field. It also could mean that you had too little information to be influenced one way or the other by this aspect.

The second part of the question asks how important this aspect of teaching was to you. You are asked to rate importance on a five point scale.

A rating of "1" should indicate minimum or no importance, while a rating of "5" should mean maximum importance. Ratings in between should be used to indicate feelings between the two extremes.

You will be presented with a list of aspects of Education training or practice. Next to each there will be two columns in which to enter your response. In the first column indicate the extent of attraction, and in the second column indicate the importance of that aspect to you. An example follows:

	Attraction					Importance				
1. Salary potential _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
2. Working hours _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5

The answer to sample question 1 indicates that salary potential was attractive and this aspect was of above average importance to the individual.

Section B of this survey should be completed by indicating how you felt when you entered teacher training. Section B1 deals with Teacher Training and Section B2 deals with Teaching in Practice

#### B.1 Indicate how you felt about Teacher Training when you entered it.

Aspect	Attraction					Importance				
1. Interest level of the training course content _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
2. Financial support for training available to regular education students—	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
3. Difficulty of the training and course work _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
4. Quality of available training in education _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
5. Ease of entry into education studies _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
6. Length of training required _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
7. Status associated with being an education student _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5

#### B. 2 Answer the following questions by indicating how you felt about Teaching when you entered teacher training

Aspect	Attraction					Importance				
1. Social relevancy of work with children _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
2. The rate of advancement in teaching _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
3. Amount of prestige associated with teaching _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5

Aspect	Attraction						Importance				
4. Work hours in teaching _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
5. General working conditions in education _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
6. The amount of time left for leisure and relaxation _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
7. Working with children _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
8. Difficulty level of work in education _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
9. Chances for success in education _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
10. The status you would gain among your peers _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
11. The way a career in education could fit into your style of life _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
12. The starting pay _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
13. The amount of vacation _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
14. The salary potential _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
15. Income security _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
16. Relevancy to your personal values _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
17. Time left to spend with your family after work _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
18. The public image of a teacher _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
19. The size of the classes you would be teaching _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
20. The flexibility to leave and return to work as your personal plans required _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
21. The ease with which you could find a job in the field after completion of training _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5

Were there other aspects of Teaching that you considered?

Please list them below and rate them on the basis of attraction and importance.

Aspect	Attraction						Importance				
_____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
_____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
_____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
_____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5
_____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>		1	2	3	4	5

Section C of this survey should be answered by indicating how you feel about these aspects now. Section C1 asks questions about Teacher training and Section C2 asks questions about teaching in practice.

C.1. Indicate how you feel now about these aspects of Teacher training.

Aspect	Attraction					Importance				
1. Interest level of the training and course content _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. Financial support for training available to regular education students _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
3. Difficulty of the training and course work _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
4. Quality of available training in education _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
5. Ease of entry into education studies _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
6. Length of training required _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
7. Status associated with being an education student _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

C.2. Indicate how you feel now about these aspects of teaching in practice.

Aspect	Attraction					Importance				
1. Social relevancy of work with children _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. The rate of advancement in teaching _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
3. Amount of prestige associated with teaching _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
4. Work hours in teaching _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
5. General working conditions in education _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
6. The amount of time left for leisure and relaxation _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
7. Working with children _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
8. Difficulty level of work in education _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
9. Chances for success in education _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
10. The status you would gain among your peers _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
11. The way a career in education could fit into your style of life _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
12. The starting pay _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
13. The amount of vacation _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
14. The salary potential _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
15. Income security _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
16. Relevancy to your personal values _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
17. Time left to spend with your family after work _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
18. The public image of a teacher _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
19. The size of the classes you would be teaching _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
20. The flexibility to leave and return to work as your personal plans required _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
21. The ease with which you could find a job in the field after completion of training _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

Were there other aspects of Teaching that you considered?

Please list them below and rate them on the basis of attraction and importance.

Aspect	Attraction					Importance				
_____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

BEH COVER LETTER TO REP  
DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE  
OFFICE OF EDUCATION  
WASHINGTON, D.C. 20202

You have been selected, along with a number of other teachers, to participate in a national survey, sponsored by the U. S. Office of Education, Bureau of Education for the Handicapped. You have made a number of career decisions concerning teaching. The Office of Education is interested in those decisions and this survey is designed to collect information about them. The information you can give will be used to help increase the supply of qualified teachers. Your assistance in this matter of professional importance will be invaluable.

All responses will be held in confidential files and tabulated for research purposes only. The responses of specific individuals will not be identified. In addition the names of those selected and responding will not be released.

Please attempt to complete this questionnaire, and return it in the enclosed self-addressed envelope within 5 days.

Sincerely,

Leonard J. Lucito, Director  
Division of Training Programs

# Career Sequence Information

The chart below has been designed to trace the sequence of training and practice you have followed. Each line (row) is designed to record data about a given time period during which you undertook a given level of training, work experience or both. Line one starts with a description of your undergraduate training; if you also had a job while going to school you would describe it on the same line. Each time you changed jobs or level of training, start a new line. Circle the symbols to describe your training and/or experience. (Circle a degree only for the time period during which it was awarded.) The first time period has been used to illustrate an example.

Start on line 2 and indicate in column 2 the first set of consecutive years you undertook undergraduate training. Circle the appropriate symbols to describe your training. Indicate any work experience you gained during that time period on the same line. Complete the succeeding lines in order, using a new line for each change in position, year of education, summer session or special study institute. On each line indicate the academic years or summer that applies and then circle the appropriate symbols. Indicate all periods of work, school, or unemployment. Do not indicate unemployment for vacations. If unemployed, circle only UE under "Experience."

Time Period		Description of Training						Description of Experience			
Time period	Academic years or summer	Training level in progress	Area	F = full time P = part time	Degree received (Circle Ed.S for certificate) Skip this column for years in which you did not receive a degree	Reason for training EF = enter field OC = obtain certification AA = advance in your area CA = change area SP = special project training O = other	Financial aid PL = PL 85-926 as amended, includes PL 88-164, PL 87-276, and PL 89-105 OF = other Federal ST = state grants, etc. DK = do not know NQ = none or other source of aid	Area UE = unemployed RE = regular education EH = Education for the Handicapped OP = other professional O = other (If UE, go on to the next line)	Type T = teacher A = administrator TT = teacher-trainer O = other	F = full time P = part time

The following pages contain a number of two-part questions about various aspects of Education. The first part of each question asks about the extent to which you were attracted to the field by that particular aspect. You will have five choices.

Answers to the left of "neutral," should indicate that you were so dissatisfied with this particular aspect that it tended to discourage you from entering the field. Answers to the right of "neutral" should indicate that although that aspect of Education for the Handicapped may not entirely meet your needs or desires, it still made the field relatively attractive to you.

The neutral or zero point indicates that the aspect in question neither attracted nor discouraged you from the field. It also could mean that you had too little information to be influenced one way or the other by this aspect.

The second part of the question asks how important this aspect of teaching was to you. You are asked to rate importance on a five point scale.

A rating of "1" should indicate minimum or no importance, while a rating of "5" should mean maximum importance. Ratings in between should be used to indicate feelings between the two extremes.

You will be presented with a list of aspects of Education training or practice. Next to each there will be two columns in which to enter your response. In the first column indicate the extent of attraction, and in the second column indicate the importance of that aspect to you. An example follows:

	Attraction					Importance				
1. Salary potential _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
2. Working hours _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5

The answer to sample question 1 indicates that salary potential was attractive and this aspect was of above average importance to the individual.

Section B of this survey should be completed by indicating how you felt when you entered teacher training. Section B1 deals with Teacher Training and Section B2 deals with Teaching in Practice

#### B.1 Indicate how you felt about Teacher Training when you entered it.

Aspect	Attraction					Importance				
1. Interest level of the training course content _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
2. Financial support for training available to regular education students _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
3. Difficulty of the training and course work _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
4. Quality of available training in education _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
5. Ease of entry into education studies _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
6. Length of training required _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
7. Status associated with being an education student _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5

#### B. 2 Answer the following questions by indicating how you felt about Teaching when you entered teacher training

Aspect	Attraction					Importance				
1. Social relevancy of work with children _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
2. The rate of advancement in teaching _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5
3. Amount of prestige associated with teaching _____	SD¹	D²	O³	A⁴	SA⁵	1	2	3	4	5

Aspect	Attraction					Importance				
4. Work hours in teaching _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
5. General working conditions in education _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
6. The amount of time left for leisure and relaxation _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
7. Working with children _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
8. Difficulty level of work in education _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
9. Chances for success in education _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
10. The status you would gain among your peers _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
11. The way a career in education could fit into your style of life _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
12. The starting pay _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
13. The amount of vacation _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
14. The salary potential _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
15. Income security _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
16. Relevancy to your personal values _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
17. Time left to spend with your family after work _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
18. The public image of a teacher _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
19. The size of the classes you would be teaching _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
20. The flexibility to leave and return to work as your personal plans required _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
21. The ease with which you could find a job in the field after completion of training _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

Were there other aspects of Teaching that you considered?

Please list them below and rate them on the basis of attraction and importance.

Aspect	Attraction					Importance				
_____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
_____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
_____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
_____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
_____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

C Answer the following questions by indicating how you felt when you entered teaching practice.

Aspect	Attraction					Importance				
1. Social relevancy of work with children	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. The rate of advancement in teaching	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
3. Amount of prestige associated with teaching	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
4. Work hours in teaching	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
5. General working conditions in education	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
6. The amount of time left for leisure and relaxation	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
7. Working with children	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
8. Difficulty level of work in education	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
9. Chances for success in education	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
10. The status you would gain among your peers	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
11. The way a career in education could fit into your style of life	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

BEH COVER LETTER SED

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE  
OFFICE OF EDUCATION  
WASHINGTON, D.C. 20202

You have been selected, along with a number of other former majors in Education for the Handicapped (all Speech Pathology and Audiology personnel should, for the purposes of this survey, consider themselves to be in Education for the Handicapped), to participate in a national survey, sponsored by the U. S. Bureau of Education for the Handicapped. You have made a number of career decisions concerning teaching. The Bureau of Education for the Handicapped is interested in those decisions and this survey is designed to collect information about them. The information you can give will be used to help increase the supply of qualified personnel trained to teach the handicapped. Your assistance in this matter of professional importance will be invaluable.

All responses will be held in confidential files and tabulated for research purposes only. The responses of specific individuals will not be identified. In addition, the names of those selected and responding will not be released.

Please attempt to complete this questionnaire, and return it in the enclosed self-addressed envelope within 5 days.

Sincerely,

Leonard J. Lucito, Director  
Division of Training Programs

1-2-3-4-5-6

EDUCATION FOR THE HANDICAPPED MANPOWER SURVEY (SED)

1. Sex (circle) M F 2. Present age: 8 9 10

3. When did you decide to enter the field of education? Year Age 11-12-13-14

4. What was the most important thing that caused you to first seriously consider Education for the Handicapped as your field?

5. When did you first enter teacher training? Year Age 15-16 17-18-19-20

6. When did you decide to enter training in Education for the Handicapped? Year Age 21-22-23-24

7. When did you first enter training in Education for the Handicapped? Year Age 25-26-27-28

8. When you entered training in Education for the Handicapped, what was your marital status?

Single ☐ Married ☐ Divorced ☐ Widowed ☐

9. When you entered training in Education for the Handicapped, what prior experience did you have with handicapped children? (If none, check here ☐ )

Situation (e.g. Home, camp)	Your relationship to handicapped person	Your age

10. When you entered training in Education for the Handicapped, what formal education did you have?

College credit hours: Semester Quarter Degree: None ☐ A.A. ☐ B.A. ☐ M.A. ☐ Ed.S\* ☐ Doct. ☐

11. How much did the amount and kind of financial support available for training in Education for the Handicapped influence you to enter the field? Not at all ☐ Very little ☐ Moderately ☐ Very much ☐

12. How far from your home (your permanent address) was the university which you attended for your training in Education for the Handicapped? Circle approximate mileage.

1. 0 - 10 2. 10 - 50 3. 50 - 500 4. 500 - 1000 5. Over 1000

13. When you decided to enter Education for the Handicapped did you think it might improve your draft status? Yes ☐ No ☐ Not applicable ☐

14. What was your first source of information about Education for the Handicapped?

15. What were the main sources of your information about Education for the Handicapped prior to your decision to enter training?

16. How would you evaluate the quality of your training in Education for the Handicapped?

Excellent ☐ Good ☐ Fair ☐ Poor ☐

17. What is your current major or job speciality?

EDUCATION FOR THE HANDICAPPED MANPOWER SURVEY (SED)

18. Please indicate on the chart at the right any changes in your area of specialization during study and practice. Start with your first area of study or practice — whichever came first—on line 1. Put an "S" for study and a "P" for practice under the area of specialization. Continue noting all changes in area of specialization on successive lines.

ND — Area of specialization not declared  
A — Administration  
VH — Visually handicapped  
SH — Speech and hearing  
MR — Mentally retarded  
LD — Learning disabilities  
ED — Emotionally disturbed  
D — Deaf  
C — Crippled  
MH — Multiple handicapped

72-73
74-75

19. What was your first contact with handicapped children?

Situation: \_\_\_\_\_

Your relation to handicapped person: \_\_\_\_\_

Your age: \_\_\_\_\_

20. Are you, or any member of your family handicapped? Yes ☐ No ☐

21. When did you decide to leave training in Education for the Handicapped? Year \_\_\_\_\_ Age \_\_\_\_\_

22. What first caused you to seriously consider leaving training in Education for the Handicapped?

23. What were the main sources of the information upon which you based your decision to leave training in Education for the Handicapped?

24. What were the main reasons you left Education for the Handicapped training?

25. Do you think that you will ever return to training in Education for the Handicapped? Yes ☐ No ☐  
If no, what could be done to make the field more attractive to you?

Career Sequence Information

The chart below has been designed to trace the sequence of training and practice you have followed. Each line (row) is designed to record data about a given time period during which you undertook a given level of training, work experience or both. Line one starts with a description of your undergraduate training; if you also had a job while going to school you would describe it on the same line. Each time you changed jobs or level of training, start a new line. Circle the symbols to describe your training and/or experience. (Circle a degree only for the time period during which it was awarded.) The first time period has been used to illustrate an example.

Start on line 2 and indicate in column 2 the first set of consecutive years you undertook undergraduate training. Circle the appropriate symbols to describe your training. Indicate any work experience you gained during that time period on the same line. Complete the succeeding lines in order, using a new line for each change in position, year of education, summer session or special study institute. On each line indicate the academic years or summer that applies and then circle the appropriate symbols. Indicate all periods of work, school, or unemployment. Do not indicate unemployment for vacations. If unemployed, circle only UE under "Experience."

Time Period		Description of Training						Description of Experience			
Time period	Academic years or summer	Training level in progress UG = undergraduate 5 = fifth year MA = masters PMA = post masters SI = special study institute	Area S = special education R = regular education O = other	F = full time P = part time	Degree received (Circle Ed.S for advanced certificate) Skip this column for years in which you did not receive a degree	Reason for training EF = enter field OC = obtain certification AA = advance in your area CA = change area SP = special project training O = other	Financial aid PL = PL 85-926 as amended, includes PL 88-161, PL 87-276, and PL 89-105 OF = other Federal ST = state grants, etc. OK = do not know source of aid NO = none or other	Area UE = unemployed RE = regular education EH = Education for the Handicapped OP = other professional O = other (If UE, go on to the next line)	Type T = teacher A = administrator TT = teacher trainer O = other	F = full time P = part time

The following pages contain a number of two-part questions about various aspects of Education for the Handicapped. The first part of each question asks about the extent to which you were attracted to the field by a particular aspect.

You will have five choices.

Answers to the left of "neutral," should indicate that you were so dissatisfied with this particular aspect that it tended to discourage you from entering the field. Answers to the right of "neutral" should indicate that although that aspect of Education for the Handicapped may not entirely meet your needs or desires, it still made the field relatively attractive to you.

The neutral or zero point indicates that the aspect in question neither attracted nor discouraged you from the field. It also could mean that you had too little information to be influenced one way or the other by this aspect.

The second part of the question asks how important this aspect of work in Education for the Handicapped was to you. You are asked to rate importance on a five point scale.

A rating of "1" should indicate minimum or no importance, while a rating of "5" should mean maximum importance. Ratings in between should be used to indicate feelings between the two extremes.

You will be presented with a list of aspects of training or practice in Education for the Handicapped. Next to each there will be two columns in which to enter your response. In the first column indicate the extent of attraction and in the second column indicate the importance of that aspect to you. An example follows:

	Attraction					Importance				
1. Salary potential	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	<u>A<sup>4</sup></u>	SA <sup>5</sup>	1	2	3	<u>4</u>	5
2. Working hours	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

The answer to sample question 1 indicates that salary potential was attractive and this aspect was of above average importance to the individual.

Section B of this survey should be completed by indicating how you felt when you entered training in Education for the Handicapped. Section B1 deals with Training and Section B2 deals with Practice.

B.1. Indicate how you felt about Training in Education for the Handicapped, when you entered it.

	Attraction					Importance				
1. Interest level of the training and course content	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. Financial support for training available to students in Education for the Handicapped	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
3. Difficulty of the training and course work	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
4. Quality of training in Education for the Handicapped	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
5. Ease of entry into training in Education for the Handicapped	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
6. Length of training required	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
7. Status associated with being a student in Education for the Handicapped	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

B.2. Answer the following questions by indicating how you felt about practice in Education for the Handicapped, when you entered special education teacher training.

Aspect	Attraction					Importance				
1. Social relevancy of work with handicapped children _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. The rate of advancement in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
3. Amount of prestige associated with Education for the Handicapped. _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
4. Work hours in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
5. General working conditions in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
6. The amount of time left for leisure and relaxation _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
7. Working with Handicapped children _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
8. Difficulty level of work in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
9. Chances for success in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
10. The status you would gain among your peers _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
11. The way a career in education for the Handicapped could fit into your style of life _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
12. The starting pay _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
13. The amount of vacation _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
14. The salary potential _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
15. Income security _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
16. Relevancy of working with the handicapped to your personal values _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
17. Time left to spend with your family after work _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
18. The public image of a teacher in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
19. The size of the classes you would be teaching _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
20. The flexibility to leave and return to work as your personal plans require _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
21. The ease with which you could find a job in the field after completion of training _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

Were there other aspects of education for the Handicapped that you considered? Please list them below and rate them on the basis of attraction and importance.

BEH COVER LETTER TO SES  
DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE  
OFFICE OF EDUCATION  
WASHINGTON, D.C. 20302

You have been selected, along with a number of other students in Education for the Handicapped (all Speech Pathology and Audiology personnel should, for the purposes of this survey, consider themselves to be in Education for the Handicapped), to participate in a national survey, sponsored by the Bureau of Education for the Handicapped, U. S. Office of Education. You as a student of Education for the Handicapped, have made a decision to enter training for work in Education for the Handicapped. The B.E.H. is interested in that decision and this survey is designed to collect information about it. The information you can give will be used to help the Bureau in its efforts to increase the supply of personnel trained to teach the handicapped. Your assistance in this matter of professional importance will be invaluable.

All responses will be held in confidential files and tabulated for research purposes only. The responses of specific individuals will not be identified. In addition, the names of those selected and responding will not be released.

Please attempt to complete the questionnaire, and return it in the enclosed self-addressed envelope within 5 days.

Sincerely,

Leonard J. Lucito, Director  
Division of Training Programs

## EDUCATION FOR THE HANDICAPPED MANPOWER SURVEY (SES)

1. Sex (circle) M F 2. Present age: \_\_\_\_\_ 8 -9 -10
3. When did you decide to enter the field of education? Year \_\_\_\_\_ Age \_\_\_\_\_ 11-12-13-14

4. What was the most important thing that caused you to first seriously consider Education for the Handicapped as your field?

5. When did you first enter teacher training? Year \_\_\_\_\_ Age \_\_\_\_\_ 15-16

6. When did you decide to enter training in Education for the Handicapped? Year \_\_\_\_\_ Age \_\_\_\_\_ 17-18-19-20

7. When did you first enter training in Education for the Handicapped? Year \_\_\_\_\_ Age \_\_\_\_\_ 21-22-23-24

8. When you entered training in Education for the Handicapped what was your marital status?

Single ☐ Married ☐ Divorced ☐ Widowed ☐

9. When you entered training in Education for the Handicapped, what prior experience did you have with handicapped children? (If none, check here ☐)

Situation (e.g. Home, camp)	Your relationship to handicapped person	Your age

29

30-31-32-33

34-35-36-37

38-38-40-41

42-43-44-45-46-47-48

10. When you entered training in Education for the Handicapped, what formal education did you have?

College credit hours: Semester \_\_\_\_\_ Quarter \_\_\_\_\_ Degree: None ☐ A.A. ☐ B.A. ☐ M.A. ☐ Ed.S. ☐ Doct. ☐

11. Did the amount and kind of financial support available for training in Education for the Handicapped help motivate you to enter the field? Not at all ☐ Very little ☐ Moderately ☐ Very much ☐

49

50-51

12. How far from your home (your permanent address) was the university which you attended for your training in Education for the Handicapped? Circle approximate mileage.

1. 0-10 2. 10-50 3. 50-500 4. 500-1000 5. Over 1000

52

53-54

13. When you decided to enter Education for the Handicapped did you think that it might improve your draft status? Yes ☐ No ☐ Not applicable ☐

14. What was your first source of information about Education for the Handicapped?

55-56-57-58-59-60

15. What were the main sources of your information about Education for the Handicapped prior to your decision to enter training?

61

62-63

16. How would you evaluate the quality of your training in Education for the Handicapped thus far?

Excellent ☐ Good ☐ Fair ☐ Poor ☐

17. What is your present area of specialization in Education for the Handicapped?

Administrative (A) ☐ Visual Handicapped (VH) ☐ Speech and Hearing (SH) ☐ Mental Retardation (MR) ☐  
 Learning Disabilities (LD) ☐ Emotionally Disturbed (ED) ☐ Deaf (D) ☐ Crippled (C) ☐ Interrelated (IR) ☐  
 Multiple Handicapped (MH) ☐

\* Educational Specialist

EDUCATION FOR THE HANDICAPPED MANPOWER SURVEY (SES)

18. Please indicate on the chart at the right any changes in your area of specialization during study and practice. Start with your first area of study or practice — whichever came first on line 1. Put an "S" for study and a "P" for practice under the area of specialization. Continue noting all changes in area of specialization on successive lines.

- ND — Area of specialization not declared  
A — Administration  
VH — Visually handicapped  
SH — Speech and hearing  
MR — Mental retardation  
LD — Learning disabilities  
ED — Emotionally disturbed  
D — Deaf  
C — Crippled  
MH — Multiple handicapped

### Career Sequence Information

The chart below has been designed to trace the sequence of training and practice you have followed. Each line (row) is designed to record data about a given time period during which you undertook a given level of training, work experience or both. Line one starts with a description of your undergraduate training; if you also had a job while going to school you would describe it on the same line. Each time you changed jobs or level of training, start a new line. Circle the symbols to describe your training and/or experience. (Circle a degree only for the time period during which it was awarded.) The first time period has been used to illustrate an example. Start on line 2 and indicate in column 2 the first set of consecutive years you undertook undergraduate training. Circle the appropriate symbols to describe your training. Indicate any work experience you gained during that time period on the same line. Complete the succeeding lines in order, using a new line for each change in position, year of education, summer session or special study institute. On each line indicate the academic years or summer that applies and then circle the appropriate symbols. Indicate all periods of work, school, or unemployment. Do not indicate unemployment for vacations. If unemployed, circle only UE under "Experience."

Time Period		Description of Training					Description of Experience			
Time period years or summer	Academic years or summer	Training level in progress UG = undergraduate 5 = fifth year MA = masters PMA = post masters SI = special study institute	Area S = special education R = regular education O = other	F = full time part time	Degree received (Circle Ed.S for advanced certificate) Sk to this column for years in which you did not receive a degree	Reason for training EF = enter field OC = obtain certification AA = advance in your area CA = change area SP = special project training O = other	Financial aid PL = PL 85-926 as amended, includes PL 88-164, PL 87-276, and PL 89-105 OF = other Federal ST = state grants, etc. DK = do not know source of aid NO = none or other	Area UE = unemployed RE = regular education EH = Education for the Handicapped OP = other professional O = other (If UE, go on to the next line)	Type T = teacher A = administrator TT = teacher trainee O = other	F = full time part time

The following pages contain a number of two-part questions about various aspects of Education for the Handicapped. The first part of each question asks about the extent to which you were attracted to the field by a particular aspect.

You will have five choices.

Answers to the left of "neutral," should indicate that you were so dissatisfied with this particular aspect that it tended to discourage you from entering the field. Answers to the right of "neutral" should indicate that although that aspect of Education for the Handicapped may not entirely meet your needs or desires, it still made the field relatively attractive to you.

The neutral or zero point indicates that the aspect in question neither attracted nor discouraged you from the field. It also could mean that you had too little information to be influenced one way or the other by this aspect.

The second part of the question asks how important this aspect of work in Education for the Handicapped was to you. You are asked to rate importance on a five point scale.

A rating of "1" should indicate minimum or no importance, while a rating of "5" should mean maximum importance. Ratings in between should be used to indicate feelings between the two extremes.

You will be presented with a list of aspects of training or practice in Education for the Handicapped. Next to each there will be two columns in which to enter your response. In the first column indicate the extent of attraction and in the second column indicate the importance of that aspect to you. An example follows:

	Attraction					Importance				
1. Salary potential	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. Working hours	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

The answer to sample question 1 indicates that salary potential was attractive and this aspect was of above average importance to the individual.

Section B of this survey should be completed by indicating how you felt when you entered training in Education for the Handicapped. Section B1 deals with Training and Section B2 deals with Practice.

B.1. Indicate how you felt about Training in Education for the Handicapped, when you entered it.

	Attraction					Importance				
1. Interest level of the training and course content _____	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. Financial support for training available to students in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
3. Difficulty of the training and course work _____	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
4. Quality of training in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
5. Ease of entry into training in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
6. Length of training required _____	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
7. Status associated with being a student in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

**B.2. Answer the following questions by indicating how you felt about practice in Education for the Handicapped, when you entered special education teacher training.**

Aspect	Attraction					Importance				
1. Social relevancy of work with handicapped children _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. The rate of advancement in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
3. Amount of prestige associated with Education for the Handicapped. _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
4. Work hours in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
5. General working conditions in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
6. The amount of time left for leisure and relaxation _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
7. Working with Handicapped children _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
8. Difficulty level of work in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
9. Chances for success in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
10. The status you would gain among your peers _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
11. The way a career in education for the Handicapped could fit into your style of life _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
12. The starting pay _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
13. The amount of vacation _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
14. The salary potential _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
15. Income security _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
16. Relevancy of working with the handicapped to your personal values _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
17. Time left to spend with your family after work _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
18. The public image of a teacher in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
19. The size of the classes you would be teaching _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
20. The flexibility to leave and return to work as your personal plans require _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
21. The ease with which you could find a job in the field after completion of training _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

Were there other aspects of education for the Handicapped that you considered? Please list them below and rate them on the basis of attraction and importance.

_____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
_____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

Section C of this survey should be answered by indicating how you feel about these aspects now. Section C1 asks questions about training in Education for the handicapped and Section C2 asks questions about Practice in Education for the Handicapped.

**C.1. Indicate how you feel now about these aspects of training in education for the Handicapped.**

Aspect	Attraction					Importance				
1. Interest level of the training and course content _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. Financial support for training available to students in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
3. Difficulty of the training and course work _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
4. Quality of training in education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
5. Ease of entry into education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
6. Length of training required _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
7. Status associated with being a student in education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

**C2. Indicate how you feel now about these aspects of Practice in Education for the Handicapped.**

Aspect	Attraction					Importance				
1. Social relevancy of work with handicapped children _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. The rate of advancement in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
3. Amount of prestige associated with Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
4. Work hours in education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
5. General working conditions in education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
6. The amount of time left for leisure and relaxation _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
7. Working with handicapped children _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
8. Difficulty level of work in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
9. Chances for success in education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
10. The status you would gain among your peers _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
11. The way a career in education for the Handicapped could fit into your style of life _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
12. The starting pay _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
13. The amount of vacation _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
14. The salary potential _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
15. Income security _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
16. Relevancy to your personal values _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
17. Time left to spend with your family after work _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
18. The public image of a teacher in education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
19. The size of the classes you would be teaching _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
20. The flexibility to leave and return to work as your personal plans require _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
21. The ease with which you could find a job in the field after completion of training _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

Were there other aspects of special education that you considered?  
Please list them below and rate them on the basis of attraction and importance.

Aspect	Attraction					Importance				
	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

BEH COVER LETTER TO SEP  
DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE  
OFFICE OF EDUCATION  
WASHINGTON, D.C. 20202

You have been selected, along with a number of other practitioners in Education for the Handicapped, (all Speech Pathology and Audiology personnel should, for the purposes of this survey, consider themselves to be in Education for the Handicapped) to participate in a national survey, sponsored by the Bureau of Education for the Handicapped, U. S. Office of Education. You, as a practitioner in Education for the Handicapped, have made a number of career decisions concerning that field. The B.E.H. is interested in those decisions and this survey is designed to collect information about them. The information you can give will be used to help the Bureau in its efforts to increase the supply of personnel trained to teach the handicapped. Your assistance in this matter of professional importance will be invaluable.

All responses will be held in confidential files and tabulated for research purposes only. The responses of specific individuals will not be identified. In addition, the names of those selected and responding will not be released.

Please attempt to complete this questionnaire, and return it in the enclosed self-addressed envelope within 5 days.

Sincerely,

Leonard J. Lucito, Director  
Division of Training Programs

1-2-3-4-5-6

EDUCATION FOR THE HANDICAPPED MANPOWER STUDY (SEP)

1. Sex (circle) M F 2. Present age: 8 -9 -10 1
3. When did you decide to enter the field of education? Year Age 11-12-13-14
4. What was the most important thing that caused you to first seriously consider Education for the Handicapped as your field? 15 16
5. When did you first enter teacher training? Year Age 17-18-19-20
6. Did you ever train for a career in Education for the Handicapped? Yes ☐ No ☐ If no, skip No. 7 21
7. When did you decide to enter training in Education for the Handicapped? Year Age 22-23-24-25
8. When did you first enter training in Education for the Handicapped? Year Age 26-27-28-29
9. When you entered Education for the Handicapped practice, what was your marital status?  
Single ☐ Married ☐ Divorced ☐ Widowed ☐ 30
10. When you entered training in Education for the Handicapped, what prior experience did you have with handicapped children? (If none, check here ☐ )
- | Situation<br>(e.g. Home, camp) | Your relationship<br>to handicapped person | Your<br>age |
|--------------------------------|--|-------------|
|                                |  | 31-32-33-34 |

|                                |  | 39-40-41-42 |
11. When you entered training in Education for the Handicapped, what formal education did you have?  
College credit hours: Semester Quarter Degree: None ☐ A.A. ☐ B.A. ☐ M.A. ☐ Ed.S\* ☐ Doct. 43-44-45-46-47-48-49
12. How far from your home (your permanent address) was the university which you attended for your training in Education for the Handicapped? Circle approximate milage.  
1. 0-10 2. 10-50 3. 50-500 4. 500-1000 5. Over 1000 50
13. How much did the amount and kind of financial support available for training in Education for the Handicapped help you to enter the field? Not at all ☐ Very little ☐ Moderately ☐ Very much ☐ 51-52
14. When you decided to enter Education for the Handicapped did you think it might improve your draft status? Yes ☐ No ☐ Not applicable ☐ 53
15. What was your first source of information about Education for the Handicapped? 54-55
16. What were the main sources of your information about Education for the Handicapped prior to your decision to enter training? 56-57  
58-59  
60-61
17. How would you evaluate the quality of your training in Education for the Handicapped?  
Excellent ☐ Good ☐ Fair ☐ Poor ☐ 62
18. Please indicate your present title and check your current work setting; Title 63  
Public School ☐ Private School ☐ Government Agency ☐ Private Agency ☐ College or University ☐  
Clinic ☐ Hospital ☐ Rehabilitation Center ☐ Other (describe) 64 65

# EDUCATION FOR THE HANDICAPPED MANPOWER STUDY (SEP)

19. Please indicate on the chart at the right any changes in your area of specialization during study and practice. Start with your first area of study or practice — whichever came first—on line 1. Put an "S" for study and a "P" for practice under the area of specialization. Continue noting all changes in area of specialization on successive lines.

ND — Area of specialization not declared  
A — Administration  
VH — Visually handicapped  
SH — Speech and hearing  
MR — Mentally retarded  
LD — Learning disabilities  
ED — Emotionally disturbed  
D — Deaf  
C — Crippled  
MH — Multiple handicapped

\_\_\_\_\_
30. Do you think that you will remain in Education for the Handicapped for at least another five years?  
Yes ☐ No ☐ If no, do you think you will return to the field at a later time? Yes ☐ No ☐ 48

## Career Sequence Information

This chart below has been designed to trace the sequence of training and practice you have followed. Each line (row) is designed to record data about a given time period during which you undertook a given level of training, work experience or both. Line one starts with a description of your undergraduate training, if you also had a job while going to school you would describe it on the same line. Each time you changed jobs or level of training, start a new line. Circle the symbols to describe your training and/or experience. (Circle a degree only for the time period during which it was awarded.) The first time period has been used to illustrate an example.

Start on line 2 and indicate in column 2 the first set of consecutive years you undertook undergraduate training. Circle the appropriate symbols to describe your training. Indicate any work experience you gained during that time period on the same line. Complete the succeeding lines in order, using a new line for each change in position, year of education, summer session or special study institute. On each line indicate the academic years or summer that applies and then circle the appropriate symbols. Indicate all periods of work, school, or unemployment. Do not indicate unemployment for vacations. If unemployed, circle only UE under "Experience."

Time Period		Description of Training						Description of Experience			
Time period, years or summer	Academic years or summer	Training level in progress UG = undergraduate 5 = fifth year MA = masters PMA = post masters SI = special study institute	Area S = special education R = regular education O = other	F = full time P = part time	Degree received (Circle Ed.S for advanced certificate) Skip this column for years in which you did not receive a degree	Reason for training EF = enter field OC = obtain certification AA = change area CA = change area SP = special project training O = other	Financial aid PL = PL 85-926 as amended, includes PL 88-164, PL 87-276 and PL 88-105 OF = other Federal ST = state grants, etc. DK = do not know source of aid NO = none or other	Area UE = unemployed RE = regular education EH = Education for the Handicapped OP = other professional O = other (If UE, go on to the next line)	Type T = teacher A = administrator TT = teacher trainer O = other	F = full time P = part time

The following pages contain a number of two-part questions about various aspects of Education for the Handicapped. The first part of each question asks about the extent to which you were attracted to the field by a particular aspect.

You will have five choices.

Answers to the left of "neutral," should indicate that you were so dissatisfied with this particular aspect that it tended to discourage you from entering the field. Answers to the right of "neutral" should indicate that although that aspect of Education for the Handicapped may not entirely meet your needs or desires, it still made the field relatively attractive to you.

The neutral or zero point indicates that the aspect in question neither attracted nor discouraged you from the field. It also could mean that you had too little information to be influenced one way or the other by this aspect.

The second part of the question asks how important this aspect of work in Education for the Handicapped was to you. You are asked to rate importance on a five point scale.

A rating of "1" should indicate minimum or no importance, while a rating of "5" should mean maximum importance. Ratings in between should be used to indicate feelings between the two extremes.

You will be presented with a list of aspects of training or practice in Education for the Handicapped. Next to each there will be two columns in which to enter your response.

In the first column indicate the extent of attraction and in the second column indicate the importance of that aspect to you. An example follows:

	Attraction					Importance				
1. Salary potential	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. Working hours	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

The answer to sample question 1 indicates that salary potential was attractive and this aspect was of above average importance to the individual.

Section B of this survey should be completed by indicating how you felt when you entered training in Education for the Handicapped. Section B1 deals with Training and Section B2 deals with Practice.

B.1. Indicate how you felt about Training in Education for the Handicapped, when you entered it.

	Attraction					Importance				
1. Interest level of the training and course content _____	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. Financial support for training available to students in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
3. Difficulty of the training and course work _____	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
4. Quality of training in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
5. Ease of entry into training in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
6. Length of training required _____	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
7. Status associated with being a student in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

B.2. Answer the following questions by indicating how you felt about practice in Education for the Handicapped, when you entered special education teacher training.

Aspect	Attraction					Importance				
1. Social relevancy of work with handicapped children _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. The rate of advancement in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
3. Amount of prestige associated with Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
4. Work hours in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
5. General working conditions in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
6. The amount of time left for leisure and relaxation _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
7. Working with Handicapped children _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
8. Difficulty level of work in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
9. Chances for success in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
10. The status you would gain among your peers _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
11. The way a career in education for the Handicapped could fit into your style of life _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
12. The starting pay _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
13. The amount of vacation _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
14. The salary potential _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
15. Income security _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
16. Relevancy of working with the handicapped to your personal values _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
17. Time left to spend with your family after work _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
18. The public image of a teacher in Education for the Handicapped _____	SD <sup>1</sup>	D <sup>2</sup>	O <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

BEH COVER LETTER TO SEA

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE  
OFFICE OF EDUCATION  
WASHINGTON, D.C. 20202

You have been selected, along with a number of people formerly in Education for the Handicapped (all Speech Pathology, and Audiology personnel should, for the purposes of this survey, consider themselves to be in Education for the Handicapped), to participate in a national survey sponsored by the Bureau of Education for the Handicapped, U. S. Office of Education. You have made a number of career decisions concerning special education. The Bureau of Education for the Handicapped is interested in those decisions and this survey is designed to collect information about them. The information you can give will be used to help the Bureau in its efforts to increase the supply of personnel trained to teach the handicapped. Your assistance in this matter of professional importance will be invaluable.

All responses will be held in confidential files and tabulated for research purposes only. The responses of specific individuals will not be identified. In addition, the names of those selected and responding will not be released.

Please attempt to complete this questionnaire, and return it in the enclosed self-addressed envelope within 5 days.

Sincerely,

Leonard J. Lucito, Director  
Division of Training Programs

1-2-3-4-5-6

# EDUCATION FOR THE HANDICAPPED MANPOWER STUDY (SEA)

19. Please indicate on the chart at the right any changes in your area of specialization during study and practice. Start with your first area of study or practice — whichever came first on line 1. Put an "S" for study and a "P" for practice under the area of specialization. Continue noting all changes in area of specialization on successive lines.

- ND — Area of specialization not declared
- A — Administration
- VH — Visually handicapped
- SH — Speech and hearing
- MR — Mental Retardation
- LD — Learning disabilities
- ED — Emotionally disturbed
- D — Deaf
- C — Crippled
- MH — Multiple handicapped

Area of Specialization in Education for the Handicapped

33-34

If yes, in how many years would you return? \_\_\_\_\_

35-36

How many years would you remain? \_\_\_\_\_

37-38

What are the main reasons for which you would return? \_\_\_\_\_

\_\_\_\_\_

39-40

## Career Sequence Information

The chart below has been designed to trace the sequence of training and practice you have followed. Each line (row) is designed to record data about a given time period during which you undertook a given level of training, work experience or both. Line one starts with a description of your undergraduate training; if you also had a job while going to school you would describe it on the same line. Each time you changed jobs or level of training, start a new line. Circle the symbols to describe your training and/or experience. (Circle a degree only for the time period during which it was awarded.) The first time period has been used to illustrate an example.

Start on line 2 and indicate in column 2 the first set of consecutive years you undertook undergraduate training. Circle the appropriate symbols to describe your training. Indicate any work experience you gained during that time period on the same line. Complete the succeeding lines in order, using a new line for each change in position, year of education, summer session or special study institute. On each line indicate the academic years or summer that applies and then circle the appropriate symbols. Indicate all periods of work, school, or unemployment. Do not indicate unemployment for vacations. If unemployed, circle only UE under "Experience."

Time Period		Description of Training					Description of Experience				
Academic years or summer	Training level in progress UG = undergraduate 5 = fifth year MA = masters PMA = post masters SI = special study institute	Area S = special education R = regular education O = other	F = full time P = part time	Degree received (Circle Ed.S for advanced certificate) Skip this column for years in which you did not receive a degree	Reason for training EF = enter field OC = obtain certification AA = advance in your area CA = change area SP = special project training O = other	Financial aid PL = PL 85-926 as amended, includes PL 88-164, PL 87-276, and PL 89-105 OF = other Federal ST = state grants, etc. DK = do not know source of aid NO = none or other	Area UE = unemployed RE = regular education EH = Education for the Handicapped OP = other professional O = other (If UE, go on to the next line)	Type T = teacher A = administrator TT = teacher trainer O = other	F = full time P = part time

The following pages contain a number of two-part questions about various aspects of Education for the Handicapped. The first part of each question asks about the extent to which you were attracted to the field by a particular aspect.

You will have five choices.

Answers to the left of "neutral," should indicate that you were so dissatisfied with this particular aspect that it tended to discourage you from entering the field. Answers to the right of "neutral" should indicate that although that aspect of Education for the Handicapped may not entirely meet your needs or desires, it still made the field relatively attractive to you.

The neutral or zero point indicates that the aspect in question neither attracted nor discouraged you from the field. It also could mean that you had too little information to be influenced one way or the other by this aspect.

The second part of the question asks how important this aspect of work in Education for the Handicapped was to you. You are asked to rate importance on a five point scale.

A rating of "1" should indicate minimum or no importance, while a rating of "5" should mean maximum importance. Ratings in between should be used to indicate feelings between the two extremes.

You will be presented with a list of aspects of training or practice in Education for the Handicapped. Next to each there will be two columns in which to enter your response. In the first column indicate the extent of attraction and in the second column indicate the importance of that aspect to you. An example follows:

	Attraction					Importance				
1. Salary potential	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. Working hours	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

The answer to sample question 1 indicates that salary potential was attractive and this aspect was of above average importance to the individual.

Section B of this survey should be completed by indicating how you felt when you entered training in Education for the Handicapped. Section B1 deals with Training and Section B2 deals with Practice.

B.1. Indicate how you felt about Training in Education for the Handicapped, when you entered it.

	Attraction					Importance				
1. Interest level of the training and course content	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
2. Financial support for training available to students in Education for the Handicapped	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5
3. Difficulty of the training and course work	SD <sup>1</sup>	D <sup>2</sup>	0 <sup>3</sup>	A <sup>4</sup>	SA <sup>5</sup>	1	2	3	4	5

### ORI FOLLOW-UP LETTER

Last week I sent you a questionnaire concerned with a study for the Bureau of Education for the Handicapped. I realize you may have many additional concerns right now, but your response is of the utmost importance to this study. If you have not already responded, could you please complete the questionnaire as soon as possible.

If you did not receive your questionnaire, if it has been lost, or if you have a valid question regarding its completion, please call me collect in Silver Spring, Maryland, Area Code 301/588-6180, extension 281, between the hours of 8:30 a.m. and 5:00 p.m. Eastern Daylight Savings Time.

Thank you.

Sincerely,

Peter M. Plantec  
Principal Investigator

## APPENDIX C

### A STATISTICAL NOTE ON THE PROBLEM OF NONRESPONSE IN THE PERSONNEL MOTIVATION STUDY

#### PURPOSE

C.1 The purpose of this appendix is to put forth some statistical questions considered in the design of a plan to control avoidable nonresponse in the Personnel Motivation Study.

#### BACKGROUND OF THE PLAN

C.2 The Personnel Motivation Study was carried out for probability samples of individuals from selected lists. The basic data collection technique was a mail survey. Because of nonresponse estimates of the characteristics of the list populations are likely to be subject to bias. These biases may be serious since the nonresponse in the study is high. Moreover, projection of the study results to other populations will depend heavily on subject-matter expertise and judgment. Because such projection usually requires knowledge of the characteristics of the list populations and of the populations to which the study results are to be extended, it could also be seriously limited by a high nonresponse.

C.3 For these reasons, it was planned to provide for follow-up of nonrespondents in the basic mail survey.

#### ALTERNATIVE PLANS CONSIDERED

C.4 On the basis of discussions between OKI and staff of the BEH and NCES, two alternative plans were analyzed. These may be described as follows:

#### Plan A

- (1) Initial mail survey (M)
- (2) Ten days after the initial mailing, send letter to nonrespondents (T)
- (3) Ten days after the sending of letters, further follow-up effort using telegrams and possibly personal contact (P)

#### Plan B

- (1) Initial mail survey (M)
- (2) Two weeks after the initial mailing, send out a follow-up mailing of the questionnaire to nonrespondents (M)
- (3) Two weeks after the follow-up mailing, send telegrams to nonrespondents (T)
- (4) Two weeks after the sending of telegrams, further follow-up effort using telephone and possibly personal contact (P)

The units may be subsampled at varying rates for the successive follow-ups. The time intervals between the successive follow-up efforts indicated are illustrative, and subject to revision.

C.5 Essentially the two plans differ in that Plan B provides for a longer follow-up period of time and the mailing of a follow-up questionnaire before the telegraphing, and can be expected to require a longer time period to complete. Plan A requested the follow-up letter recipient to request a questionnaire by telephone if he did not have one.

### ANALYSIS OF THE PLANS

#### Theory

C.6 The analysis of the plans is based on the objective of using the sample to estimate averages (e.g., average scores on questions) or percentages for various items. The analysis considers the design of the plan so as to achieve a desired precision at minimum cost. The precision desired is taken to be that which would result from a mail survey of a sample of 100 persons if there were no nonresponse.

C.7 For purposes of analysis, the plans may be described in terms of Tables C.1 and C.2. Thus, in Plan A the initial mailing is sent to a sample of persons of whom  $n_{11}$  respond and  $(n_1 - n_{11})$  do not respond by the time the letter follow-up is to be started. Letters are sent to  $n_2$  of the  $(n_1 - n_{11})$  nonrespondents, and so on as indicated in the tables. Also as shown, respondents are considered to be of three types under Plan A (four types under Plan B); i.e., those who would:

- a. Respond to the initial mailing before telegram follow-up (Type 1)

TABLE C.1  
FOLLOW-UP PLAN A

Wave	Total Sample	Number of Responses	Nonresponses by Type		
			Total	Type 2	Type 3
1 (M)	$n_1$	$n_{11}$	$(n_1 - n_{11})$	$n_{12}$	$n_{13}$
2 (T)	$n_2$	$n_{21}$	$(n_2 - n_{21})$	—	$n_{23}$
3 (P)	$n_3$	$n_3$	—	—	—

TABLE C.2  
FOLLOW-UP PLAN B

Wave	Total Sample	Number of Responses	Total	Nonresponses by Type		
				Type 2	Type 3	Type 4
1 (M)	$n_1$	$n_{11}$	$(n_1 - n_{11})$	$n_{12}$	$n_{13}$	$n_{14}$
2 (M)	$n_2$	$n_{21}$	$(n_2 - n_{21})$	—	$n_{23}$	$n_{24}$
3 (T)	$n_3$	$n_{31}$	$(n_3 - n_{31})$	—	—	—
4 (P)	$n_4$	$n_4$	—	—	—	—

- b. Respond to the letter follow-up but not the initial mailing (Type 2)
- c. Respond to the further follow-up techniques but not the earlier ones (Type 3)

The numbers of nonrespondents by type in each wave are random variables which cannot be observed; i.e., only the total nonresponse is known. It is assumed in this analysis that there is no nonresponse to the final follow-up effort. The effect of dropping this assumption is considered later.

C.8 The statistical theory for Plans A and B is an extension of that for double sampling.\*

C.9 Estimators. The estimator for the average of a characteristic, say  $x$ , is taken with Plan A to be

$$\bar{x}_A = \frac{x_{11} + kx_{21} + kgx_{31}}{n_1} \quad (1)$$

where

$$k = n_{12}/n_2 \quad g = n_{23}/n_3 \quad (2)$$

and  $x_{11}$ ,  $x_{21}$  and  $x_{31}$  are the sample totals (or counts, for a proportion) from the respondents in Waves 1, 2, and 3, respectively. Thus  $1/k$  is the subsampling rate for the selection of nonrespondents to Wave 1 (mail canvass) to be followed up in Wave 2 (letters); and  $1/g$  is the subsampling rate applied to the Wave 2 nonrespondents. With Plan B the estimator is taken, similarly, to be

$$\bar{x}_B = \frac{x_{11} + kx_{21} + kgx_{31} + kgfx_{41}}{n} \quad (3)$$

Both of these estimators are unbiased.

C.10 Sampling Variances. The sampling variance of the estimator is:

$$\sigma_{\bar{x}_A}^2 = (1-\pi) \frac{S^2}{n_1} + (k-1) \frac{P_2^* S_2^{*2}}{n_1} + k(g-1) \frac{P_3 S_3^2}{n_1} \quad (4)$$

---

\* See M.H. Hansen and W.N. Hurwitz, "The Problem of Nonresponse in Sample Surveys," J. American Stat. Assn., 41 (1946), 517-529, for the case of a survey with one follow-up.

$$\sigma_{\bar{x}_A}^2 = (1-\pi) \frac{S^2}{n_1} + (k-1) \frac{P_2^* S_2^{*2}}{n_1} + k(g-1) \frac{P_3^* S_3^{*2}}{n_1} + kg(f-1) \frac{P_4 S_4^2}{n_1} \quad (5)$$

with the following definitions:

$\pi$  = Rate at which the population (list) is sampled for the mail survey

$S_3^2$  = Variance of  $x$  in the population

$1/f$  = Subsampling rate for the selection if nonresponses toward 3

It is assumed that if the Plan A survey procedures were applied to the entire population sampled, the proportion of persons who would respond to the mail questionnaire would be  $P_1$ , the proportion responding to the telegram but not an initial mailing would be  $P_2$ , and the proportion responding to the Wave 3 techniques but not the earlier ones would be  $P_3$ . Then

For Plan A

$S_3^2$  = Variance of  $x$  in the population represented by  $P_3$  (i.e., the variance among those who would respond only to Wave 3)

$P_2^* = P_2 + P_3$

$S_2^{*2}$  = Variance of  $x$  in the population represented by  $P_2^*$

For Plan B

$P_2^* = P_2 + P_3 + P_4$

$P_3^* = P_3 + P_4$

with definitions for the other symbols analogous to those for Plan A.

C.11 Cost functions. The expected survey cost, apart from fixed costs independent of the size of sample, is a function of the following unit costs.

$c_0$  = cost of data processing per unit processed

$c_1$  = cost of a mailing, per unit canvassed

$c_2$  = cost of a letter follow-up, per unit follow-up

$c_3$  = cost of a telegram (etc.) follow-up, per unit follow-up

The expected cost with Plan A is

$$C_A = n_1 \left\{ c_1 + c_2 \frac{P_2^*}{k} + c_3 \frac{P_3}{kg} + c_0 \left( P_1 + \frac{P_2}{k} + \frac{P_3}{kg} \right) \right\} \quad (6)$$

and with Plan B is

$$C_B = n_1 \left\{ c_1 \left( 1 + \frac{P_2^*}{k} \right) + c_2 \frac{P_3^*}{kg} + c_3 \frac{P_4}{kgf} + c_0 \left( P_1 + \frac{P_2}{k} + \frac{P_3}{kg} + \frac{P_4}{kgf} \right) \right\} \quad (7)$$

C.12 Optimization. To determine the size of initial mailing and sub-sampling rates which will minimize cost subject to the desired precision, say  $\epsilon^2$ , the Lagrangian

$$C + \lambda (\sigma^2 - \epsilon^2)$$

is formed, differentiated with regard to the parameters of interest and the resulting equations solved in the usual way. The solutions for Plan A are

$$n_1 = n_0 \{ P_1 + kP_2 + kgP_3 \} \quad (8)$$

where  $n_0$  is the sample size that would yield the desired precision if there were no nonresponse to the initial mailing

$$k = \sqrt{\frac{\frac{P_2^* c_2 + P_2 c_0}{c_1 + P_1 c_0} \quad \frac{S^2 - P_2^* S_2^{*2}}{P_2^* S_2^{*2} - P_3 S_3^2}}{}} \quad (9)$$

$$g = \sqrt{\frac{\frac{c_3 + c_0}{P_2^* c_2 + P_2 c_0} \quad \frac{P_2^* S_2^{*2} - P_3 S_3^2}{S_3^2}}{}} \quad (10)$$

If

$$S^2 \doteq S_2^{*2} \doteq S_3^2$$

the expressions for  $k$  and  $g$  simplify to the ratios of the total costs per response in the different waves. Thus

If

$$k \doteq \sqrt{\frac{\frac{c_2}{(P_2/P_2^*)} + c_0}{\frac{c_1}{P_1} + c_0}} \quad (11)$$

$$g \doteq \sqrt{\frac{\frac{c_3 + c_0}{\frac{c_2}{(P_2/P_2^*)} + c_0}}{\frac{c_1}{P_1} + c_0}} \quad (12)$$

For Plan B

$$n_1 = n_0 \{P_1 + kP_2 + kgP_3 + kgfP_4\} \quad (13)$$

$$k = \sqrt{\frac{\frac{P_2^* c_1 + P_2 c_0}{c_1 + P_1 c_0} \quad \frac{S^2 - P_2^* S_2^{*2}}{P_2^* S_2^{*2} - P_3 S_3^{*2}}}{\frac{P_3^* c_2 + P_3 c_0}{P_2^* c_1 + P_2 c_0} \quad \frac{P_2^* S_2^{*2} - P_3 S_3^{*2}}{P_3^* S_3^{*2} - P_4 S_4^2}}} \quad (14)$$

$$g = \sqrt{\frac{\frac{P_3^* c_2 + P_3 c_0}{P_2^* c_1 + P_2 c_0} \quad \frac{P_2^* S_2^{*2} - P_3 S_3^{*2}}{P_3^* S_3^{*2} - P_4 S_4^2}}{\frac{c_3 + c_0}{P_3^* c_2 + P_3 c_0} \quad \frac{P_3^* S_3^{*2} - P_4 S_4^2}{S_4^2}}} \quad (15)$$

$$f = \sqrt{\frac{\frac{c_3 + c_0}{P_3^* c_2 + P_3 c_0} \quad \frac{P_3^* S_3^{*2} - P_4 S_4^2}{S_4^2}}{\frac{c_1}{P_1} + c_0}} \quad (16)$$

The expressions for k, g and f simplify, if

$$S^2 \doteq S_2^{*2} \doteq S_3^{*2} \doteq S_4^2$$

to

$$k \doteq \sqrt{\frac{\frac{\frac{c_1}{(P_2/P_2^*)} + c_0}{\frac{c_1}{P_1} + c_0}}{\frac{c_1}{P_1} + c_0}} \quad (17)$$

$$g \doteq \sqrt{\frac{\frac{\frac{c_3}{(P_3/P_3^*)} + c_0}{\frac{c_1}{(P_2/P_2^*)} + c_0}}{\frac{c_1}{(P_2/P_2^*)} + c_0}} \quad (18)$$

$$f \doteq \sqrt{\frac{c_3 + c_0}{\frac{c_2}{(P_3/P_3^*)} + c_0}} \quad (19)$$

### Numerical Analysis

C.13 Computations were carried out for the two plans to compare their costs and other features with varying assumptions as to composition of the population by types of respondents. This composition determines the expected response rates by wave. The following cost relationships were used for purposes of the analysis:

$$c_0 = \$1.00$$

$$c_2 = \$4.00$$

$$c_1 = \$0.50$$

$$c_3 = \$10.00$$

Values for  $k$ ,  $g$ , and  $f$  were computed from the approximations (11) and (12) for Plan A, and (17) - (19) for Plan B. The value of  $n_0$  was taken to be 100.

C.14 Computations were carried out assuming that Type 1 respondents constituted 70%, 50%, 30% or 15% of the population. These would represent the rate of return to the initial mailing. For Plan B it was assumed that about the same rate of return would be obtained in the mail follow-up as in the initial mailing. Thus,  $(P_2/P_2^*)$  is taken about equal to  $P_1$ . For each assumed rate of return for mailing, two pairs of values were assumed for the proportions of respondents to the letter follow-up and to the telegram follow-up. One pair assumed a higher proportion of respondents to the letter follow-up than to the final telegram follow-up, and the other assumed equal proportions of each type. Computations for Plan B were carried out only for assumed mail rates of response of 50% and 30%, since the other rates were sufficiently extreme that the choice between the two plans is fairly clear.

### RESULTS OF ANALYSIS

C.15 Tables C.3 and C.4 summarize the characteristics of Plans A and B for the illustrative assumptions. In these tables "R" denotes a response and " $\bar{R}$ " a nonresponse.

C.16 As expected, Tables C.3 and C.4 show that the survey costs increase as response rates for the less expensive techniques decline. The cost of eliminating the final nonresponse ranges from about 10% to 50% of the total cost depending on the nonresponse rates.

TABLE C.3

* See text for statement of assumptions made.						

C.17 There seems little to choose between the performance of the two plans in the cases illustrated. Plan B has the disadvantage of stretching out the survey period, with some additional cost to the study that is not included in these computations. Also, the computations may be slightly biased in favor of Plan B since the telephone responder component of the population turns out to be lower in Plan B in three of the four cases. On the other hand, if the mail nonrespondents tend to throw away the questionnaire sent by mail before receiving the telegram follow-up, the response rate to the telegrams could be substantially less than assumed in the tables.

#### SELECTED PROCEDURE

C.18 The following Plan A procedure was adopted:

- a. The size of the initial mailing was set at the largest size indicated by the analysis, under the most unfavorable response assumptions. A further adjustment in this size was made to provide for the fact that the mailing lists are not "pure" and for the fact that some final nonresponse will be unavoidable.
- b. The size of the successive follow-up efforts were determined on the basis of the mail return.

#### COMPUTATION OF FOLLOW-UP RATES BASED ON ACTUAL RETURNS

C.19 This section outlines the computation of follow-up rates for the letter follow-up based on the return to the initial mailing, and for the third wave follow-up based on the response to the letter follow-up.

##### Letter Follow-Up

C.20 Theory. The conditional variance of an estimated mean (or proportion) for a given initial mailing,  $n_1$ , and response to it,  $n_{11}$ , is

$$\sigma_{\bar{x}/c_1}^2 = (1-\pi) \frac{S^2}{n_1} + \frac{q_1}{n_1} (k-1) S_2^* + \frac{q_1}{n_1} k(g-1) P_3' S_3^2 \quad (C.7)$$

where  $q_1$  is the proportion of persons who did not respond to the initial mailing, and

$$P_2' = P_2 / (P_2 + P_3).$$

To satisfy the precision specification we set

$$\sigma_{\frac{2}{>c}/c_1}^2 = \epsilon^2$$

so the variance constraint is

$$(k-1)S_2^* + k(g-1)P_3' S_3^2 = \frac{n_1}{q_1} \left[ \epsilon^2 - (1-\pi) \frac{S^2}{n_1} \right] = F \quad (21)$$

and the new cost function, representing the expected cost for Waves 2 and 3, is

$$C = \frac{n_1 \sigma_1}{k} \left\{ (c_2 + c_0 P_2') + \frac{(c_3 + c_0) P_3'}{g} \right\} \quad (22)$$

From (21)

$$k = \frac{F + S_2^{*2}}{S_2^{*2} - P_3' S_3^2 + g P_3' S_3^2} \quad (23)$$

So that (22) becomes

$$C = \frac{n_1 q_1}{F + S_2^{*2}} \left\{ (c_2 + c_0 P_2') + \frac{(c_3 + c_0) P_3'}{g} \right\} \{ S_2^{*2} - P_3' S_3^2 + g P_3' S_3^2 \} \quad (24)$$

This is minimized by taking

$$g = \sqrt{\frac{C_3 + C_0}{P_2^* C_2 + P_2 C_0} \frac{P_2^* S_2^{*2} - P_3 S_3^2}{S_3^2}} \quad (25)$$

which is the same optimum as found prior to the initial response. This is intuitively reasonable, since the subsampling rate for final follow-up depends only on the relationships between the cost and variance parameters for Waves 2 and 3. Thus, it would not be expected that it should be affected by the results of the initial mailing. What is affected is the level of Wave 2, as determined by substituting in (23) the optimum value for  $g$  as given by (25).

Since

$$\epsilon^2 = (1 - \pi_0) \frac{S^2}{n_0} \quad (26)$$

where  $\pi_0$  is the sampling rate that would be used if there were no nonresponse, then if  $(1 - \pi)$  and  $(1 - \pi_0)$  are approximately equal to 1,  $F$  simplifies to

$$\frac{S^2}{q_1} \left( \frac{n_1}{n_0} - 1 \right) \quad (27)$$

If, also,

$$S^2 \doteq S_2^{*2} \doteq S_3^2$$

(23) Simplifies to

$$k = \frac{(\frac{n_1}{n_0} - 1)/g_1}{P_2^* + g P_3^*} \quad (28)$$

with

$$g = \sqrt{\frac{C_3 + C_0}{\frac{C_2}{(P_2/P_2^*)} + C_0}} \quad (29)$$

C.21 Numerical Analysis. With the cost relationships assumed, and  $n_1/n_0$  equal to 2 as in the study design, the following table illustrates values at  $k$  and  $g$  for differing assumptions as to  $P_2^*$  ( $= P_2/P_2^*$ )

$P_2^*$	$g$	$kq_1$	$1/g$	$1/kq_1$
.8	1.352	.9342	.74	1.071
.7	1.280	.9225	.79	1.084
.6	1.198	.9226	.84	1.080
.5	1.051	.9751	.96	1.026
.4	1.000	1.0000	1.00	1.000

Since

$$\frac{1}{k} = \left(\frac{1}{kq_1}\right) q_1$$

it is seen that the subsampling rate for Wave 2 is roughly equal to the nonresponse rate in Wave 1. Under the most unfavorable assumptions as to  $P^*$  illustrated, it would be sufficient to take

$$\frac{1}{k} = 1.1 q_1 \quad (30)$$

Values of  $1/k$  for alternative assumptions as to  $q_1$  are shown in the following listing:

Nonresponse Rate in Initial Mailing	Subsampling Rate for Letter Follow-Up
.3	.33
.4	.44
.5	.55
.6	.66
.7	.77

#### Final Follow-Up

C.22 Theory. The conditional variance of an estimated mean (or proportion) for a given initial mailing of  $n_1$ , response of  $n_{11}$ , and follow-up at rate  $1/k$ , may be approximated by

$$\sigma_{x/c_2}^2 \doteq (1 - \pi) \frac{S_1^2}{n_1} + \frac{q_1}{n_1} (k - 1) S_2^{*2} + \frac{q_1 q_2'}{n_1} k(g - 1) S_3^2 \quad (31)$$

where  $q_2'$  is the proportion of persons included in the telegram follow-up wave who did not respond; and  $n_1$ ,  $q_1$  and  $k$  have the values experienced in Waves 1 and 2. To satisfy the precision specification we set

$$\sigma_{x/c_2}^2 = \epsilon^2$$

and solve the resulting equation for  $g$ . With the simplifying assumptions introduced in paragraph C.21 we find

$$g = 1 + \frac{1 - q_1 (k - 1)}{q_1 q_2' k} \quad (32)$$

If  $k$  is taken from (30)

$$g = 1 + \frac{0.1 + 1.1 q_1}{q'_2} \quad (33)$$

C.23 Numerical Analysis. With the preceding assumptions, Table C.4 illustrates values of  $k$  and  $g$  for differing assumptions as to  $q_1$  and  $q'_2$ .

#### Procedure

C.24 A reasonably efficient and simple procedure is to determine the Wave 2 follow-up rate from values listed on the preceding page (paragraph C.21), or the corresponding formula (30), based on Wave 1 experience; and the Wave 3 follow-up rate from Table C.4 based on the experience in Waves 1 and 2.

C.25 Tables C.5 and C.6 shows the actual response rates and the computed follow-up weights for Waves 2 and 3, respectively.

## APPENDIX D

### DATA PRESENTATION

D.1 The material in Appendix D is intended to serve not only as detail to the findings and conclusions in Section III, but as an original source of data for further research. The data are presented in tabular form with a brief explanation of the questionnaire source and any cross references.

D.2 Where necessary, code legends and questionnaire items have been included.

D.3 The last section of tabulations labeled "Motivation Profiles" includes a special note on interpretation of the data.

D.4 Tabulations are numbered and arranged according to the following index:

<u>Population Sample</u>	<u>Type of Tab</u>	<u>Type Code</u>	<u>Tab Numbers</u>	<u>Page Numbers</u>
CNF	Simple	(S)	1-13	D- 5

Motivation Profiles			1-25	D-164

## INTRODUCTION TO MOTIVATION SCALE PROFILES

D.5 The motivation scale profiles are arranged by population in the following order:

Students	{	Special Education Students (SES)
		Special Education Dropouts (SED)
		Regular Education Students (RES)
Practitioners	{	Special Education Practitioners (SEP)
		Special Education Attirees (SEA)
		Regular Education Practitioners (REP)

The profiles have been computed for the following decision points:

<u>Decision</u>	<u>Populations</u>
To enter training	SES, SED, RES, SEP, SEA, REP
To remain in training (present feeling)	SES, RES
To leave training	SED only
To enter practice	SEP, SEA, REP
To remain in practice(present feeling)	SEP, REP
To leave practice	SEA only

Additional profiles have been computed by sex for all populations and by population subgroups for the SES, SED, and SEP samples. A total of 25 different profiles are presented.

D.6 The following cross reference (Table D.1) will be useful in making specific profile comparisons of interest to BEH.

#### HOW TO INTERPRET THE MOTIVATION PROFILES

D.7 A great deal of information remains to be extracted from the profiles in this appendix. Several methods of obtaining more usable information from the profiles are to—

- a. Examine the individual factors concerning specific decisions by sample group. This is helpful for determining the relative importance of the different aspects in the decision. This approach can be taken using total score profiles, or the sex and subgroup breakdowns. In this way, the differential importance of individual factors on decisions made by men versus women can be determined.
- b. Examine the grand mean for each profile. That is, to add all of the attractions scores and divide by the total N. This statistic is an estimate of the overall attraction the average sample type feels for special education at that decision point. This approach may be useful in establishing criteria by which attrition can be predicted on a probability basis.
- c. Incorporate a factor profile analysis similar to that used in interpreting the strong vocational interest blank.<sup>1/</sup> This type of analysis requires much time. It calls for the development of computer analysis programs which correlate response patterns with specific criteria (such as the decision to leave education for the handicapped). These programs can identify any one person's questionnaire responses as being most nearly like those of the average dropout or student, etc.

Codes

1. Has PL 85-926 amended had any impact on your programs? Yes \_\_\_ No \_\_\_  
Explain:

0 = no response or incorrect

2 = yes, program gets traineeships and/or fellowships through state Department of Education.

3 = yes, financial assistance to qualified, better prepared students

4 = yes, more full-time students as result of funding

5 = yes, department will receive funds for 70-71 fiscal year—prestige through funding

6 = yes, funds through local Educational Service Center

7 = yes, other

Codes (Cont.)

10 = no only

11 = no, no funds available or don't know

12 = no, program has not applied for funding

13 = no, program has expanded in spite of lack of PL 85-926 funding

14 = no, time wasted writing proposals, etc.

15 = no, program has applied but has not been funded

16 = no, other

(1) = PERCENT OF TOTAL NUMBER OF RESPONSES  
(INCLUDING NON-RESPONSE CATEGORY)  
(2) = PERCENT OF PARTIAL TOTAL NUMBER OF RESPONSES  
(EXCLUDING NON-RESPONSE CATEGORY)

Codes

5. In your opinion, are graduate fellowships effective in producing high quality graduate students? Yes \_\_\_ No \_\_\_ Explain:

0 = no response or incorrect  
2 = yes only

4 = yes, funding has increased enrollment in program and, thus, increased competition for grants available  
5 = yes, small number of grants available ensures only the most qualified students as recipients  
6 = yes, permits selection of students on basis other than economic, gives qualified students with financial handicaps opportunities for training  
8 = yes, PL 85-926 funding only available to students who are qualified and are in financial need  
9 = yes, funding has aided qualified students to continue in graduate program

Codes (Cont.)

11 = yes, quality students (funded) tend to attract other good students  
12 = yes, PL 85-926 funds have provided consultants and other professionals who have enhanced program, attracting qualified students  
14 = yes, increase in staff, programming, counseling, etc., permits more adequate screening of applicant  
16 = yes, since program funding students graduating from program are doing better on comprehensive exams and obtaining better positions  
17 = yes, other  
19 = no only  
21 = no, program only undergraduate  
22 = no, other

TABULATION OF POSSIBLE BENEFIT OF PL85-926 FUNDS TO PROGRAMS PRESENTLY UNFUNDED

## Codes

1. In general what do you think has been the impact of PL 85-926 on your training program?

- 0 = no response or incorrect
- 1 = financial assistance to qualified students
- 2 = recognition of program by administration—gained status
- 3 = increase in qualified faculty, support staff, lecturers, consultants, etc.
- 4 = improvements and additions to curriculum
- 5 = increase in student enrollment (graduate or undergraduate)
- 6 = improvement of general quality of program
- 7 = addition or improvement of resource materials, facilities, etc.
- 8 = stimulation of research activities
- 9 = existence of workshops, summer training, programs, conferences, etc.

## Codes (Cont.)

- 10 = expanded program areas
- 11 = responsible for initiation of program into separate department
- 12 = advancement of degree program(s)
- 13 = reorganization on local state and/or national level
- 14 = assistance to community
- 16 = "excellent" impact (no specifics)
- 17 = "moderate" impact (no specifics)
- 18 = little or no impact (no specifics)
- 22 = increased feeling of professionalism in program
- 23 = private university funding, not as great as state university, smaller impact
- 25 = other

Codes

4. In your opinion, has PL 85-926 stimulated the university to supply additional funds to your program? Yes \_\_\_ No \_\_\_ Explain:

0 = no response or incorrect

1 = no only

2 = no, university cut back on available funds as a result of PL 85-926 funding to program

3 = no, university does not supply additional funds to program, however, has not cut back on funding

5 = no, university feeling that it is not necessary to aid program receiving PL 85-926 funds

7 = no, other

10 = yes only

11 = yes, increase in funding for faculty, support, staff, lecturers, consultants, etc.

Codes (Cont.)

12 = yes, increase in funding for additional curriculum offerings, summer workshops, training programs

13 = yes, increase in funding for resource materials and facilities

14 = yes, university agreement to take over funding in case of loss of PL 85-926 grant

15 = yes, funding for research projects

16 = yes, funding for new degree program or programs

17 = yes, university granted additional monies for fellowships, traineeships, etc.

18 = yes, university matched support funds

19 = yes, amount of money university stimulated to supply, difficult or impossible to determine

20 = yes, university financial support not commensurate with the additional faculty load resulting from PL 85-926 funding

21 = yes, other

5. In your opinion, have PL 85-926 funds had an effect on the quality of your students entering training in Education for the Handicapped? Yes \_\_\_ No \_\_\_

Explain:

- 0 = no response or incorrect
- 1 = no
- 2 = yes only
- 3 = tightened requirements for admission into program
- 4 = funding has increased enrollment in program and, thus, increased competition for grants available
- 5 = small number of grants available ensures only the most qualified students students as recipients
- 6 = permits selection of students on basis other than economic, gives qualified students with financial handicaps opportunities for training

Codes (Cont.)

- 8 = PL 85-926 funding only available to students who are qualified and are in financial need
- 9 = funding has aided qualified students to continue in graduate program
- 10 = funding has allowed university to publicize program to potential students
- 11 = quality students (funded) tend to attract other good students
- 12 = PL 85-926 funds have provided consultants and other professionals who enhanced program, attracting qualified students
- 13 = too soon to know results of funding
- 14 = increase in staff, programming, counseling, etc., permits more adequate screening of applicant
- 15 = student cumulative grade average in program has risen as result of funding
- 16 = since program funding students graduating from program are doing better on comprehensive exams and obtaining better positions
- 17 = other

## INTERPRETATION OF PAD SPECIAL TABULATIONS

### Introduction

These tabulations should be interpreted in the following way:

- Title across the top of tabulation identifies parameters enumerated within the tab.
- The column titles indicate comparison populations.
- Each row title represents a different reference year between 1963-64 and 1968-69.
- Column and row entries indicate the average change per year in the tabulation parameter (i.e., number of male students) between the reference year and 1968-69. Note that the 1968-69 row always contains zeros since it cannot be compared with itself.
- Minus signs indicate an annual reduction in the parameter for that population, for all schools with the reference year in that row.

Remember—the tabulation entries are the estimated average change per year in the population parameters.

Also remember—that each entry refers to the population indicated in the column heading, which is a subset of the population in the row heading (the universities with a particular reference year).

25. Do you think that you will ever return to training in Education for the  
Handicapped? Yes, No. If no, what could be done to make the field  
more attractive to you?

- 0 = no response, no only, or incorrect response
- 1 = yes
- 2 = no, currently in study or practice in preferred fields
- 3 = no, reduce load of required non-EH courses for undergraduates
- 4 = no, more on-the-job training
- 5 = no, more practical EH courses—less theory
- 6 = no, smaller EH classes

EH = education for the handicapped

Codes (Cont.)

- 7 = no, decrease number of different handicap areas in single EH classroom
- 8 = no, more realistic picture of field during EH training
- 9 = no, improved curriculum
- 10 = no, improvement of facilities in EH
- 11 = no, improved counseling and guidance
- 12 = no, improved quality of teacher trainers

APPENDIX E  
UNIVERSITIES INCLUDED IN THE UNIVERSITY IMPACT STUDY

SCHOOLS THAT DO RECEIVE PL 85-926 FUNDS AND  
DO HAVE A PROGRAM OF SPECIAL EDUCATION

Alabama

Alabama A&M College  
Auburn University \*  
University of Alabama \*

Arizona

University of Arizona \*

Arkansas

University of Arkansas \*

California

California State College at Fullerton  
California State College at Long Beach \*  
California State College at Los Angeles \*  
College of the Holy Names  
San Diego State College \*  
San Francisco State College \*  
San Jose State College \*  
Stanislaus State College  
University of California at Santa Barbara  
University of Southern California \*

Colorado

Colorado State University  
University of Colorado \*  
University of Denver \*

Connecticut

Southern Connecticut State College \*  
University of Connecticut

---

\*Funded schools with speech and hearing in a department separate from special education.

District of Columbia

The Catholic University of America  
Gallaudet College  
The George Washington University\*

Florida

The Florida State University\*  
University of Florida  
University of South Florida\*

Georgia

Emory University  
University of Georgia\*

Hawaii

University of Hawaii\*

Idaho

Idaho State University\*

Illinois

Bradley University  
Eastern Illinois University  
Illinois State University\*  
Northwestern University\*  
Southern Illinois University  
University of Illinois\*

Indiana

Ball State University\*  
Indiana State University\*  
Indiana University\*  
Purdue University

Iowa

University of Iowa\*

Kansas

Kansas State University  
University of Kansas\*  
Wichita State University

### Kentucky

University of Kentucky\*

### Louisiana

Louisiana State University and A&M College\*  
Northwestern State College  
Tulane University

### Maryland

University of Maryland\*

### Massachusetts

Boston University\*  
Emerson College  
Northeastern University\*  
University of Massachusetts

### Michigan

Central Michigan University\*  
Eastern Michigan University\*  
Marygrove College  
Northern Michigan University \*  
University of Michigan\*  
Wayne State University\*  
Western Michigan University\*

### Minnesota

St. Cloud State College\*  
University of Minnesota\*

### Mississippi

Mississippi State College for Women  
University of Southern Mississippi

### Missouri

Northeast Missouri State College\*  
Saint Louis University\*  
University of Missouri \*  
University of Missouri, Kansas City  
Washington University

Montana

University of Montana

Nebraska

University of Nebraska\*

New Jersey

Montclair State College

Newark State College\*

Seton Hall University

New Mexico

Eastern New Mexico University\*

New Mexico State University

University of New Mexico\*

New York

City University of New York\*

Hofstra University\*

Hunter College, City University of New York

Ithaca College

New York University\*

Queens College, City University of New York

Suny/Albany\*

Suny/Buffalo

State University of New York, State College at Fredonia

State University of New York, State College at Geneseo

Teachers College, Columbia University\*

Syracuse University\*

North Carolina

University of North Carolina at Greensboro

North Dakota

Minot State College\*

University of North Dakota

Ohio

Bowling Green State University\*

Cleveland State University

Heidelberg College

University of Cincinnati\*  
Kent State University\*  
Oberlin College  
Ohio University\*

#### Oklahoma

Oklahoma State University  
Phillips University  
University of Oklahoma  
University of Oklahoma Medical Center

#### Oregon

Oregon College of Education\*  
Portland State College\*  
University of Oregon\*

#### Pennsylvania

Bloomsburg State College\*  
California State College\*  
Pennsylvania State University\*  
Temple University\*

#### Tennessee

University of Tennessee\*  
Vanderbilt University

#### Texas

Baylor University  
North Texas State University  
Our Lady of the Lake College  
Southern Methodist University  
Texas Christian University  
Texas Technological College\*  
University of Houston\*  
University of Texas\*

#### Utah

Brigham Young University\*  
University of Utah\*  
Utah State University\*

#### Vermont

University of Vermont

Virginia

University of Virginia\*

Washington

Central Washington State College \*

Eastern Washington State College

University of Washington \*

Washington State University

West Virginia

Marshall University\*

West Virginia University \*

Wisconsin

Marquette University

University of Wisconsin, Madison\*

University of Wisconsin, Milwaukee \*

Wisconsin State University, Eau Claire\*

Wisconsin State University, Stevens Point

Wyoming

University of Wyoming \*

SCHOOLS THAT DO NOT RECEIVE PL 85-926 FUNDS  
BUT DO HAVE A PROGRAM OF SPECIAL EDUCATION

Alabama

Alabama College\* \*  
University of South Alabama

Arkansas

Harding College—Main Campus  
Ouachita Baptist University  
Philander Smith College

California

Chapman College  
Chico State College\*\*  
Pepperdine College\* \*  
San Fernando Valley State College\*\*  
Stanford University\*\*  
University of California at Berkeley  
University of California at Riverside  
University of the Pacific\*\*
